"The Romance of Sandro Botticelli" (Dodd, Mead), by A. J. Anderson, is a sequel to "The Romance of Fra Filippo Lippi." By dint of following up Botticelli's patrons and contemporary memoirs, adding withal a considerable dose of pure invention, a plausible background is built out of scanty materials. Although the chronology is bolstered up with an appendix, the original arguments need hardly be taken seriously. The not very difficult lover of historical romance will probably get pleasure and edification from this book. It is at times vivid, and not infrequently cheap. The definition of Platonic love as "a sexual friendship that was free from a suspicion of flirtation" is merely an extreme example of a frequent kind of offending. Mr. Anderson supposes a complete collapse in Botticelli's powers of expression after 1490. Clearly he regards the Calumny, the St. Zenobius panels, the Virginia, the Lucretia, and the Mystical Adoration in the National Gallery as inferior works. Plainly the book is for the cruder type of Botticellian, a clan sufficiently numerous to provide an excellent public.

From Country Life, Limited (London) we receive a handsome facsimile reprint in folio of John Shute's "The First and Chief Groundes of Architecture." This treatise on the classical orders was published in London in 1563, and is the first systematic treatment of the matter in the English tongue. Shute, on the title page, calls himself painter and architect. There is reason to suppose that he was chiefly the former. His Italian journey was made in 1550 at the expense of the Duke of Northumberland. Shute emphasizes the fact that, aside from the reading of Serlio and others, he studied the buildings on the spot, both ancient and modern. His treatise, which considers merely the draughting of the orders and their superimposition, is probably only the beginning of what was to have been an extended work. Possibly his influence may be detected in Longleat, but it seems as if his book, which is extant only in five copies, made little stir. Practicing architects in Elizabethan England undoubtedly had recourse immediately to Alberti, Serlio, and Palladio, the plates being sufficiently eloquent even to one who could not deal with the text. For antiquarian reasons, however, architects of scholarly type will be glad to have this excellent facsimile reprint on their shelves. It is accompanied by brief but sufficient introductory matter and notes by Lawrence Weaver. The edition is limited to one thousand copies.

In Francis Bond's "The Cathedrals of England and Wales" (Scribner) we have a guide-book which cannot fail to be of great value, not only to the architect, but also to that large, and increasing, number of laymen who make the tour of the cathedral cities of Great Britain. Inasmuch as each of these important buildings has a life-history of its own, the author's intention has been to add to their interest for the reader by treating them biographically. As he says in his introduction, the ordinary guide-book seems to be written with the one definite end—to save the legs of the visitor by offering no obstruction to his walking through the building once and for all, without retracing any of his steps. But if he takes such a course in the regular order, what he will see will probably be (as in Winchester, for example), "first, what was done in the nave in the latter part of the fourteenth and in the fifteenth century; then the work done in the crossing in the twelfth century: then work done in the transepts in the eleventh century; then the work in the choir in the first half of the fourteenth century; then the work done in the retro-choir early in the thirteenth century; finally, sixteenth-century work in the Lady chapel."

Such a procedure evidently gives the visitor to a cathedral no adequate idea of the vitality of the building as an organic growth, and leads him to overlook the practical and æsthetic reasons for the varied changes made as the building developed. Mr. Bond's biographical method, on the contrary, has the great merit of placing before us, as a consecutive story, the processes which have led to the constructions as we find them to-day—a story which gains in interest as he describes, with no little skill, the motives which led to their rebuilding and rearrangement. In a book which covers so broad a field with such minuteness of detail, it would be too much to hope that no errors of fact and interpretation have been made; but these our author has used care to avoid by special consultation with local experts. The book is profusely illustrated with small but excellent photographic reproductions.

New sections on Japanese metal work give special value to a second edition of H. Wilson's "Silverwork and Jewelry" (in the Artistic Crafts Series of Technical Handbooks, edited by W. R. Lethaby and published by Appleton). The author, since the appearance of the first edition of his manual, has witnessed demonstrations by Profs. Unno Bisei and T. Kobayashi, of the Imperial Fine Arts College, Tokio, where he was "deeply impressed not only by the simplicity of the tools and methods, but by the miraculous skill with which these tools and methods are employed." Mr. Wilson's descriptions of the Far Eastern processes of inlaying, damascening, and casting are illustrated with explicit pen drawings, and are of a kind to stir the imitative faculties of the Occidental metal worker, whether professional or amateur. A report of a lecture by Mr. Bisei gives important historical and technical information about methods of working and decorating metals in the Ashikaga and subsequent periods, formulæ for the composition of *shibuichi* and *shakudo*, and recipes for coloring metals. These details will not interest the general reader (save here and there a collector of Japanese sword guards or bronzes), but they are full of useful suggestions to the craftsman. A newly added chapter on Egyptian jewelry follows Emile Vernier's book on Egyptian goldsmiths' work. The second edition, for the rest, is, like the first, an admirable guide to elementary workshop practice in the crafts with which it deals.

Finance

FINANCIAL EUROPE AND THE DEFEAT OF TURKEY.

When the Balkan War was beginning, exactly a month ago, the decline on Europe's stock market began, which culminated in the two-hour panic of Saturday, October 12, on the stock exchanges of Paris, Berlin, Vienna, and St. Petersburg. When the early news from the front came in, two somewhat opposite symptoms developed on those markets—money stringency, which led to a rise in official discount rates at all the great European state banks, and recovery in the stock markets, which at London became rapid in last week's closing days. This last-named movement occurred in the face of the Turkish army's unexpected and sensational defeat. It occurred, also, notwithstanding the earlier and quite general consensus of foreign critics, that a Turkish victory, which should maintain the *status quo*, would make for financial reassurance, whereas a sweeping victory for the Balkan states, with the diplomatic friction which must accompany settlement of peace, would be highly disturbing to the markets.

Financially, then, the questions now at issue are: Will the markets of the next few weeks be more affected by the fact that the war is near its end and a prolonged strain on capital resources averted, or by the fact that the uncertainties of another Berlin conference are before us? In either case, was the recent apprehensive movement on Europe's money markets due to the Balkan war alone, or to other and deeper causes which the war brought into light.

It was on Thursday, October 17, that Turkey formally declared war. On the same day, bank rates went up at London, Paris, and Stockholm; the Bank of Germany similarly moved up its rate on the 24th; the Belgian bank rate had already risen on the 16th; the Bank of Austria followed suit on the 25th, and the Imperial Bank of Russia on the 29th. On Thursday, the 31st, the Bank of France again advanced its rate, fixing the highest minimum since November, 1907. Only in the Wall Street panic of that month, and in the "Boer War panic" in the autumn of 1899, has any such general advance of rates at the European state banks occurred.

For three reasons, the rise in the French bank rate is the matter of special interest. Only once before in this generation—in 1899—has the Bank of France raised its rate twice in a single fortnight. Last Thursday's second advance occurred on a day when the Bourse, at its monthly settlement, was paying differences on the panicky fall in prices of the three preceding weeks. Finally, and of singular historical interest, Thursday's 4 per cent. rate was not only the highest established at any time since November, 1907, but was actually the highest level reached at the Bank of France in October of any year since 1881.

In 1907, the 4 per cent. rate was fixed as a barrier to the seemingly limitless demand for gold by the panic-stricken New York market. In 1899, the rate got to 4½ in December, on the defeat of England's South African armies and the blockade of the Transvaal gold mines. In 1881, the Paris bank rate rose to 5 per cent. on October 20, after having been 3½ as recently as September, and the reason then, as was the case last month, was a very menacing speculative situation on the Bourse.

It had been suddenly discovered, at the time, not only that a multitude of private speculators had gone beyond their depth, but that banking institutions were involved. The Bank of France and the Government tided matters over until the monthly Bourse settlement of February, 1882. One or two Paris banks then had to go; the French financial market was thrown into panic; the London bank rate went to 6 per cent., and even on Wall Street call money got up to 17 per cent.

This is in many respects an interesting precedent. It is not to be supposed that it infers any such sequel at Paris to the present disturbances. Nothing of the sort followed the high Paris rates of 1899 and 1907. But the difficulty in the present case seems to be that the Balkan crisis caught the Paris credit market heavily extended. That was not true of 1899; still less of 1907. But the very fact that during 1908, 1909, and 1910 Paris was resorted to by every borrowing Government and market in the world, and that nearly all applicants were accommodated, suggested a process of tying-up capital.

Paris has taken quantities of shares from here, and not always shares of the best quality; it has engaged heavily in rubber shares, South American shares, bonds of second-rate Governments (including the Balkan states), and, above all, Russian industrials in the field of oil, iron, and coal. Many people wondered why, in September of last year, after the French banks had called back their loans from Germany and thereby caused a financial crisis at Berlin, there should have ensued a formidable crash at Paris also. On the face of the situation, it would have been inferred that such recall of capital would have made the Paris position extremely comfortable, and there were some European critics who argued that Paris was bringing its money home from Germany, not because it feared a German war, but because it had to have the capital back at once.

One of the most singular of all the incidents of this whole curious chapter of European finance is that, while the financial world, during the whole of 1912, has been pointing at Berlin as the market which would have the most painful experience in the "October settlement," the actual arrival of October found Berlin, on the whole, in thoroughly sound condition, but Paris itself in straits. Perhaps financial Berlin has to thank the New York banks, and their loan of $120,000,000 during the tiding-over of last winter, for its own easy escape; but even this leaves us confronted with the state of affairs at Paris.

This phase of the European financial situation will remain deeply interesting, whatever happens in the Balkan war. It will be equally interesting to see how this European situation affects our markets. In the foreign tight-money period of 1907, we were ourselves the cause. In the similar stringency of 1882, our markets suffered heavily in the after-results—chiefly because Wall Street also had been over-speculating, and had just completed a season of disastrous harvest failure.

In the other severe and general European money stringency of our time—the crisis of 1899—the American market was temporarily incommoded, and for a time was badly pinched. Then it resumed its movement of prosperity, which swept along to April, 1901. The movement was hardly impeded, even by the Berlin market's very serious crisis at the end of 1900; our own markets were building on the foundations of genuine economic strength and trade revival.

Just Ready

Germany and the German Emperor

By HERBERT PERRIS, author of "A Short History of War and Peace" (*Home University Library*), "Russia in Revolution," etc.

With map, 8vo. $3.00 *net.*

A study of the modern German character as an evolution of German political history. A sympathetic defence of the German people and their political aims; but not less a frank indictment of certain national traits, reflected in the Kaiser's *Welt Politik.*

Henry Holt & Co., 34 W. 33 St. New York

MIRIAM LUCAS

By Canon Sheehan

Crown 8vo. $1.35 *net; by mail,* $1.50

The author of "The Queen's Fillet" and "My New Curate" deals in his new novel with some unusual features of Irish life in our own day, including the "Irish Curse." The scene of the story is laid partly in America.

Longmans, Green, & Co.

Now Ready

The MAN WHO CAME BACK

By JOHN FLEMING WILSON

This is the story of the primrose paths trod by a reckless young prodigal, spoiled by great wealth and dissipation and east off by his father, who "strikes bottom" in a Shanghai slum. It is the story, too, of how a wanton of the music halls recalls him to himself, and of how, thanks to her, he resolutely "came back."

12mo. Illustrated by Bracker. 75 *cents net.*

THE CAT

Being a collection of endearments and invectives lavished by many writers upon an animal much loved and much abhorred. Selected and arranged by **Agnes Repplier**, author of "The Fireside Sphinx," etc. Illustrated by **Elizabeth F. Bonsall.**

Prefixing her selections with an essay instinct with the charm of one of the most delightful of familiar essayists, Miss Repplier has here brought together the finest passages in literature devoted to the cat. *16mo. Illustrated.* $1.00 *net; postpaid,* $1.08.

STURGIS & WALTON CO.

31-33 East 27th Street, New York.

A MEMOIR OF GEORGE PALMER PUTNAM

Together with a Record of the Earlier Years of the Publishing House Founded by Him

By GEORGE HAVEN PUTNAM

8vo. With Photogravure Frontispiece. $2.50 *net. By mail,* $2.75.

"With George Palmer Putnam as with many of his contemporaries, to be a publisher, an author, a soldier, a collector of customs, all more or less at the same time, was nothing unusual. Thus it happens that his biography which his son has written contains a thousand good stories of people whom his father met, authors, publishers, soldiers, ambassadors, diplomats and others. As a spectator at Bull Run, as publisher, as author, he distinguished himself, but particularly as publisher, and it is as a publisher that he is able to recount his best stories."—*N. Y. Times.*

HOUGHTON MIFFLIN COMPANY'S
NOVEMBER BOOKS

MARY JOHNSTON'S CEASE FIRING

As Miss Johnston chose for the title of her first novel on the War between the States "The Long Roll," the call to action, so for the second and last she has chosen the command "Cease Firing." In imaginative power, vividness and impressiveness the book is even greater than "The Long Roll," which the critics agreed in styling "the greatest war novel ever written."

Throughout the book General Lee is the dominant figure, as Jackson was in the former work, and although the story, following history, must close with the defeat of the South, it ends, nevertheless, with a fine and sane note of hopeful looking-forward to the future.

Illustrated in Color by N. C. Wyeth *$1.40 net. Postage 14 cents*

ESSAYS, HISTORY, &c.

SAMUEL M. CROTHERS.
Humanly Speaking
Delightfully whimsical essays in which the author of "The Gentle Reader" travels, observes and arrives at certain interesting conclusions. $1.25 *net;* postage 12 cents. (*Ready next week.*)

Our House
By ELIZABETH ROBINS PENNELL.
London life as seen from an upper apartment overlooking the Thames, illustrated by Joseph Pennell. Boxed. $2.50 *net;* postage 18 cents.

Boston New and Old
By T. RUSSELL SULLIVAN.
Well-known and remote corners of Boston leisurely described. Strikingly illustrated by Lester G. Hornby. Limited to 750 copies. $7.50 *net;* postpaid.

The Autobiography of an Individualist
By J. O. FAGAN.
The varied experiences and the wise observations of an unusual man, author of "Confessions of a Railroad Signalman." $1.25 *net;* postage 11 cents.

Intimations of Immortality in the Sonnets of Shakspere
By GEORGE H. PALMER.
An essay of unusual interest combining literary and religious exposition and criticism. 75 cents *net;* postage extra.

POETRY

Shadows of the Flowers
By THOMAS BAILEY ALDRICH.
A selection of fifty charming passages from Aldrich's writings, illustrated and printed in a style quaintly unique. $2.00 *net;* postage extra.

Poems and Plays of William Vaughn Moody
The poet's complete works, including a large collection of unpublished pieces together with an introduction by John M. Manly. Two vols. with portraits. Each $1.50 *net;* postage 11 cents.

A Dome of Many-Coloured Glass
By AMY LOWELL.
This collection of unusual poems combines marked technical ability with a rare and individual poetical feeling. $1.50 *net;* postage 6 cents.

The Unconquered Air and Other Poems
By FLORENCE EARLE COATES.
This brilliant and appealing volume begins with the strong and suggestive piece inspired by the wonders of aviation, and contains numerous other poems of significance. $1.25 *net;* postage 8 cents.

Uriel and Other Poems
By PERCY MacKAYE.
In this, his latest volume, Mr. MacKaye brings together his important recent poems on occasions of academic and public interest. $1.00 *net;* postage 7 cents.

OF SPECIAL APPEAL

The Children's Reading
By FRANCES J. OLCOTT.
A review of the entire field of juvenile literature, by the former head of the Children's Department of the Carnegie Library, Pittsburgh. $1.25 *net;* postage extra. (*Ready next week.*)

Gutter Babies
By DOROTHEA SLADE.
"Exquisitely written . . . what with the text and pictures, this is a delightful and appealing book."—*Living Age.* Illus. in tint. $1.25 *net;* postage 12 cents.

When I Was a Child
By YOSHIO MARKINO.
The vivid and picturesque narrative of childhood experiences in Japan, and of youthful adventures in San Francisco. Fully illustrated by the author. $1.50 *net;* postage 15 cents.

The Japanese Twins
By LUCY FITCH PERKINS.
'Pictures the queer life and customs, games and duties of the children on the other side of the world. Illustrated by the author. $1.00 *net;* postage 14 cents.

The Milk Question
By MILTON J. ROSENAU.
A complete and authoritative study of all the various aspects of the question of the quality and healthfulness of our milk. Illustrated. $2.00 *net;* postage 16 cents.

Ready November 23

ITALY IN THE THIRTEENTH CENTURY
By HENRY D. SEDGWICK
An important contribution to the field of Italian historical scholarship. Mr. Sedgwick is well-known as one of the most brilliant of contemporary essayists and historians. In two vols. Illustrated. $5.00 *net;* postage extra.

THE ALBANY TEACHERS' AGENCY knows how. Twenty-one years of successful experience in bringing together good teachers and good schools. 81 Chapel St., Albany, N. Y. Ask for bulletin 20 and see for yourself.

PROFESSORSHIP—A gentleman, for several years professor of chemistry at a State university, and who has since had experience in chemical industries, desires to return to University work as professor of pure or applied chemistry. Abundant evidence as to qualifications, professional standing, and exceptional teaching ability can be produced. Graduate of leading universities at home and abroad. Address: "Spectemur," care *The Nation.*

Manly's ENGLISH POETRY
8vo, cloth, xxviii+580 pages, price **$1.50**
The book includes poetry ranging in date from the beginning of the middle-English period to the death of Tennyson. No other single volume of equal range and price is now available, and each year sees an increase in the popularity of this work among readers and students who desire a carefully selected, well-balanced and exhaustive collection of poetry.

Manly's ENGLISH PROSE
8vo, cloth, xix+544 pages, price **$1.50**
A companion volume to "English Poetry" and, like it, intended for use in a general survey of English literature. The period covered extends from the Anglo-Saxon Chronicle through the time of Robert Louis Stevenson. In this book there is probably a larger field from which to choose than has ever been offered in any similar collection of the world's literary masterpieces.

IMPORTANT BOOKS

HEREDITY AND EUGENICS. By JOHN M. COULTER, WILLIAM E. CASTLE, EDWARD M. EAST, WILLIAM L. TOWER, and CHARLES B. DAVENPORT.

A book intended to present the recent developments of knowledge in reference to evolution, heredity, and eugenics, and related subjects. Five of the leading investigators in this field have collaborated in its production, and the result is a work which will appeal to the general public, because it presents the latest conclusions in a popular and extremely interesting manner. The authors are eminently fitted to discuss that branch of the subject covered by their respective contributions to the work.

312 *pages*, 8*vo*, *cloth; postpaid* $2.70.

THE MECHANISTIC CONCEPTION OF LIFE. Biological Essays by JACQUES LOEB, Head of the Department of Experimental Biology, Rockefeller Institute for Medical Research.

This volume consists of nine chapters written on different occasions, and mostly in response to requests for a popular presentation of the results of the author's investigations. The layman is led into the wonderful realms of biology, where he is made to see with understanding eyes things which heretofore have had no meaning for him, or about which he has at best speculated and thought with but partial comprehension.

238 *pages*, 12*mo*, *cloth; postpaid* $1.65.

AGRICULTURAL EDUCATION in the PUBLIC SCHOOLS. By BENJAMIN M. DAVIS.

In this book Professor Benjamin M. Davis has attacked the problem of the co-ordination of all the agencies now at work on the problem of agricultural education. He had performed a service which will be appreciated by all who have any large knowledge of the problem and of the difficulties which the movement encounters. He has made an effort to canvass the whole field and to give a detailed exposition of the forces employed in building up a rational course of agricultural education. He has presented more fully than anyone else the materials which define the problem and which make it possible for the teacher to meet it intelligently. The annotated bibliography at the end of the book will do much to make the best material available for anyone desiring to get hold of this material through independent study. The book serves, therefore, as a general introduction to the study of agricultural education.

170 *pages*, 8*vo*, *cloth; postpaid*, $1.12.

NEW SCRIBNER BOOKS

By

Meredith, Galsworthy, Tchekoff, Mrs. Dargan, &c.

The Letters of George Meredith

EDITED BY HIS SON.

The letters of George Meredith, which have been in process of selection and preparation since his death in 1909, will be found one of the most varied, interesting and revealing of such autobiographical collections. They extend over some fifty years, beginning—except for a few scattered notes from his boyhood—about 1858, when Meredith was thirty years old, and after his first marriage. Among his correspondents are included his lifelong friends, John Morely (Lord Morely), Admiral Maxse, another of his most intimate associates; Frederick Greenwood, Chapman, the publisher, Leslie Stephen, Robert Louis Stevenson, Trevelyan.

2 vols. $4.00 net; postpaid, $4.38.

The Poems of George Meredith

With some notes by G. M. TREVELYAN.

Complete in one volume. With portrait.
$2.00 net; postpaid, $2.19.

The Inn of Tranquillity

By JOHN GALSWORTHY.

This new collection of John Galsworthy's shorter writings is divided into two sections, one containing papers "Concerning Life," the other "Concerning Letters." The second has a special value in that therein Mr. Galsworthy sets forth his literary and artistic beliefs. The first is rather similar to that charming earlier volume of sketches called "A Motley."

$1.30 net; postpaid, $1.39.

The Mortal Gods and Other Dramas

By OLIVE TILFORD DARGAN.

A new book of poetic dramas by Mrs. Dargan, whose previous volumes, "Lords and Lovers and Other Dramas" and "Semiramis," have given her not only a position in the first rank of American poets, but a position peculiarly her own. "A Son of Hermes" is a drama of the time of Alcibiades, "The Sword of Love," one of the Crusades in the twelfth century, and "The Mortal Gods" deals with current social philosophy in an imaginary country.

Plays by Anton Tchekoff

"Uncle Vanya," "Ivanoff," "The Sea-Gull," and "The Swan Song." Translated from the Russian by MARIAN FELL.

These four plays, by one of the greatest of modern Russians, whom Tolstoi declared to be comparable only to Maupassant, show not only the range and depth of his astonishing genius, but they give a picture of Russian life unequalled since Turgénieff. Three of the plays are here translated for the first time into English.

Frontispiece, 12mo. $1.50 net; postpaid, $1.65.

The Kiss and Other Stories

By ANTON TCHEKOFF.

After reading one or two of these you understand the comparison of Tchekoff to Maupassant. Their method is the same. But these stories do not tempt you to look into method. They are so natural and detached that you take them as a matter of course. Your feeling is like that given when a search light bores into darkness and reveals something before quite hidden. They reveal Russian life particularly, but all life generally—as do the plays translated by Marian Fell.

$1.50 net.

Creditors and Pariah

By AUGUST STRINDBERG.

With a valuable introduction by the author.

The second is one of those singular duels of intellect in which you can follow rapid thrust and parry and see chance rise and fall as clearly as if the two men fenced with rapiers.

"Creditors" reveals the soul of a woman who takes but never gives. It is one of the writer's most famous plays—a fascinating but terrible three-sided conflict between this woman and two men.

Edwin Bjorkman is translator of these as he was of earlier volumes.

The price is 75 cents net; by mail, 83 cents.

The New Life of Byron

By ETHEL COLBURN MAYNE.

The first detailed life since the publication of Lord Lovelace's "Astarte" in 1905, and thus the first seriously written biography since the "Byron Mystery" was solved. In it the author discusses that remarkable episode and the theories evolved by Mr. Richard Edgcumbe from the publication of "Astarte"; she sums up the psychological situation of the three parties concerned and points out the true value of Harriet Beecher Stowe's revelations.

With 24 illustrations. Two vols., 8vo. $6.00 net

CHARLES SCRIBNER'S SONS 153 FIFTH AVE., NEW YORK

The Nation

NEW YORK THURSDAY, NOVEMBER 14, 1912.

The Week

How much of a "mandate" will the Democrats have behind them for tariff reform? Doubtless a great deal will be made in protection quarters of the fact that both Roosevelt and Taft stood for high protection, and that if we added their votes in every State, leaving Wilson's as it stands, Wilson would be found badly beaten. But, apart from the fundamental unsoundness of any such might-have-been calculations, there are two circumstances that destroy this contention as related to the tariff question. In the first place, the great bulk of the Roosevelt vote was given to him without any reference to the tariff issue; it was a "We Want Teddy" vote, Teddy being wanted by his followers either because he was personally their idol or because he stood for the distinctive programme of the new party—the "social justice" programme. Thus Jane Addams expressly stated that she espoused Roosevelt's cause in spite of her intense opposition to protectionism. And in the second place, whatever may be said of 1912, there is no question at all about the "mandate" of 1910. It was on the tariff issue that the Republican party was then overwhelmed, and everything that happened between the Congressional elections of 1910 and the Presidential election the other day only confirmed the showing then made of the state of the public mind on the subject.

Difficulties of party nomenclature will confront the opposition in the new Congress. There will be Republicans and Progressives, of course; but how is the distinction to be made between the Roosevelt Progressives and the anti-Roosevelt Progressives? The situation in the Senate is peculiarly interesting. Of the seven men who by their vote on the Payne-Aldrich bill broke openly with the Administration, and earned the name of Insurgents, one, Dolliver, is dead, and another, Beveridge, is out of the Senate. Senator Nelson's term expires next March, but he seems to be sure to succeed himself. When the break with the Republican party became permanent, the provisional term Insurgent gave way to the almost official name Progressive. To the five survivors of the original Progressive Senators—Bristow, Clapp, Cummins, La Follette, and Nelson—there have been added three others, Gronna, Poindexter, and Works. But of these eight men, only two—Clapp and Poindexter—are Roosevelt men. Now that the Progressive name has become so closely associated with the fortunes of the Colonel, what will Mr. La Follette do, or Mr. Nelson, or Mr. Works? Will they retain a label which morally is theirs but in practice would stamp them as followers of one they decidedly do not love? Or are we to have something like a four-party system in the Senate, with Democrats, Republicans, Progressive Republicans, and National Progressives?

A marked feature of the election was the widespread embarrassment caused by the "big" ballot. Voters from the Atlantic to the Pacific were confused and impeded in the registration of their choice by ballots both unwieldy and puzzling. In Pennsylvania eleven party tickets helped to swell the ballot to proportions which gorged the boxes long before the polls closed. Mayor Blankenburg of Philadelphia, who voted about midday, was forced to "stuff" the box by the judicious used of a poker. In Chicago, the ballot was said to be the largest ever voted anywhere. In the State of Washington the official paper measured no less than thirty by forty inches; and the fact that thirty-eight measures were presented for the ratification of the people of Oregon, in addition to the names of national, State, and local candidates, necessitated a huge ballot in that commonwealth also. Indeed, it was but a slight exaggeration for one of our Chicago contemporaries to remark that the problem of the voter was to get himself and his ballot into the booth at the same time. The evils of such a condition are manifest. There is ground for hope, however, that the extent of the annoyance this year may prove an effective argument for the short ballot in the future.

Of the two Napoleonic moves suddenly made by the Colonel preparatory to the campaign of Armageddon, it is difficult to say which has proved the more complete failure. He declared for woman suffrage, and five of the six suffrage States refused to follow his banner. His cool throwing over of the Southern colored delegates was an act of deliberate calculation, and that calculation has been absolutely falsified. Hardly so much as the faintest echo to his bid for Southern white support was heard from any quarter during the campaign; and the figures of the election confirm the tale of flat failure. Is it not quite possible, too, that both the sudden access of fervor in the woman-suffrage cause and the hasty adoption of a policy towards the negroes which was in diametrical contrast with his actions while President, hurt the Colonel in all parts of the country by chilling the faith of thousands in his sincerity?

A professor of history has doubtless as much right as anybody else to state just what would have happened in an election if things had been other than as they were; and Prof. Albert Bushnell Hart, in a long and elaborate letter in the New York *Times*, makes abundant use of that privilege. His lucubrations, however, are almost childishly innocent; and he further relieves us of any impulse we might nevertheless have felt to analyze his speculations into what *would* have happened, by making a ridiculous blunder as to what actually *did* happen. He lays great stress on the matter of the Southern vote, which "the name Republican repels"; and this is what he says about the figures of that vote:

> The scanty returns show Roosevelt votes in every Southern State, with a total of between 500,000 and 600,000. That is a splendid start in the South, but the greater part of that vote cannot be had by the Republican party.

Now, taking the returns as given by Professor Hart himself in the table appended to his letter, the total Roosevelt vote in the eleven Southern States was not "between 500,000 and 600,000," but just 271,000; and the aggregate of the votes for Taft and Roosevelt together in these States was 473,000. But this is not the worst of it; for, so far from being "a splendid start in the South," the fact is that Mr. Taft in 1908, with the full burden of the repellent name Republican on him, polled 504,000 votes in these same States, or 31,000 more than Roosevelt and Taft together polled this year.

So gross a blunder—due to no mere arithmetical slip, for Mr. Hart simply did not think it necessary to look up the figures of 1908 in order to assert that the figures of 1912 were something new and wonderful—ought to suffice for one exhibition by a professor of history; but Professor Hart gives us a delightful logical error for good measure. He asserts that the figures of the election show that the Roosevelt men at the Chicago Convention were right in their claims in "Texas, with 38,000 to 36,000." The decision of the Committee on Credentials, he says, "has been 'recalled' by the voters." We have no desire to go into the facts of the case; but it would be interesting to know by what newly invented mental process Mr. Hart is able to regard the 38,000 Texas votes for the Progressive candidate in November as having been Republican votes in June, in the face of his own statement that "the greater part" of those who voted for Roosevelt in the South last Tuesday are men whom "the name Republican repels" and whose votes "cannot be had for the Republican party."

This is unquestionably, and in some sense preëminently, an age of discussion. The multitude reached by the printed word is incomparably greater than that which, in any previous age of the world, was seriously addressed by the exponents of varying views on the great questions of the time. Equally striking is the range of topics which form the subject-matter of discussion. On the one hand, there is an enormous mass of problems occupying the attention of specialists in the various sciences; and on the other hand, in the domain of politics, of ethics, of economics, of social customs and ideals, of human interests generally, old-established convictions and traditions are constantly challenged in the forum of general popular discussion. And finally, the instrumentalities of discussion have been multiplied with almost bewildering rapidity. Congresses, conventions, conferences, societies, "academies," clubs, organizations of every conceivable nature, and dealing with every conceivable interest, abound in a degree that a few decades ago was wholly unknown.

In spite of this vast extension of the function of discussion in our modern life—perhaps indeed because of it—there is one important aspect of discussion in which we seemed to have retrograded rather than progressed. It must often impress the lover of keen and solid debate that, in the very places where this might most be looked for, we find it almost wholly absent. To take the most conspicuous of recent discussions, the Presidential campaign just closed: it furnished no such crop of genuine debate, debate with backbone, as the older political contests of our country used to supply. The combatants seldom came to grapples, and when they did the discussion was confined to the very largest outlines of their respective positions. One can hardly help feeling, in this and in other instances, that with the spreading out of the field, the enlargement of the audience, and the multiplication of the quantity of argumentative matter fed to the public, there has gone a certain softening of the metal, a certain blunting of the edge, of the sword of debate.

The programme of the annual meeting of the American Economic Association, to be held in Boston December 27 to 31, is of exceptional interest. This is owing not to the mere timeliness of the subjects, for this may well be an objection rather than a recommendation in the case of a body which should be regarded as primarily scientific; but the topics to be discussed, besides being timely in the highest degree, are all of them of such character as to demand for their proper treatment the resources of minds thoroughly trained in the methods of economic thought. The four main subjects are "The Minimum Wage," "The Rising Cost of Living," "Banking Reform," and "Economics of Governmental Price Regulation." We would suggest to the management of the Association that special arrangements be made to obtain such means of reporting the meetings as will encourage the publication by the daily press of fairly adequate accounts of the papers and discussions; full reports are of course printed in the Proceedings of the Association some months later, but these do not reach the general public. We note with interest the statement, in the announcement, that "it is the aim to give less than the usual time to the reading of formal papers and more time to discussion."

Signs of a rush for the cyclone cellar are still exasperatingly absent. During the campaign, this strange insensitiveness in the presence of great peril might have been ascribed to the invincible optimism of the American temper and the confidence of the great business men of the country that, in spite of all signs to the contrary, the nation would at the last moment rally to the defence of that protective system on which its prosperity has been built. But there is no longer any way out of the conclusion that the business world is simply deaf, dumb, and blind. With the Democrats actually sweeping not only the Presidency and the House, but—what few thought possible up to a very little while ago—also the Senate, ruin stares the country squarely in the face, and yet the business world goes on smiling as if nothing had happened. It is not content even with a besotted silence on the situation; here is a group of financiers and business men of national prominence meeting in Philadelphia and talking of the prospect of brilliantly good times before the country.

One of the most regrettable of Mr. Taft's preëlection acts was his coming out in favor of the Militia Pay bill, just two or three days before the voting. There was no necessity for thus committing himself in advance to this measure, which is, on its face, one of the most dangerous that have been before Congress in many a year. Ever since the foundation of our government the militia service of the country has been performed by volunteers, who are unpaid except when actually in camp or in the field. This bill provides payment for every drill participated in by a militiaman in the armories, at the rate of from fifty cents per man upward. Now, it cannot be maintained that this is necessary because of a failure to obtain good and sufficient recruits for the Guard. It has always been possible to get men enough for regiments which are well administered. In New York State, for instance, we have seen within a year the organization of three new cavalry and artillery regiments, while the colored people are begging for the opportunity to form still another. It is estimated that the bill will cost the Government eight million dollars to begin with. This is probably just about as trustworthy a guess as those in the past in regard to the cost of pension bills. If the history of our Government shows anything, it is that this eight millions will rapidly be doubled and trebled; it would be a false step that, once taken, could not be retraced, and it would lead to one raid after another upon the Treasury.

Another world's record is brought to the attention of a proud and happy nation by the secretary of the Atlanta Chamber of Commerce, who writes:

> You no doubt will be interested in knowing that Gov. Joseph M. Brown has just measured an acre in his Cherokee County farm, which produced 158 bushels of corn. This breaks the world's record for corn raised by a Governor.

The new world's record is duly noted and accepted. It immediately takes its place beside the recently established world's record for the highest altitude ever attained by a Hard-shell Baptist minister in a one-hundred-horsepower Blériot monoplane, flying between 2 and 4 P. M. in a non-mountainous country; the world's record for the quickest time ever made by a one-legged Irish newsboy in swimming the North River from West Fifty-ninth Street to Weehawken, and other similar world's records which cause the breast of every true American to swell with pride. As a people, we suppose ourselves to be liberally endowed with the sense of humor.

An important contribution to the psychology of salesmanship has just been made in a trial in London. An art adviser and an art collector, both well known, combined their forces for the purpose of making a concerted attack upon American millionaires. The attack was so far successful in one case as to result in the sale of several hundred thousand dollars' worth of pictures. The commissions upon this amount would be quite attractive, and the plaintiff sued to get them. During the cross-examination of the defendant the following colloquy occurred:

> When you offered Mr. Temple only $10,000, was it so that you might get another bit for yourself?
>
> No, not at all. It was because I had discovered his incapacity and unworthiness.
>
> The fact remains that, having discovered his incapacity and unworthiness, you still went on taking introductions from him for buying purposes.
>
> But not for selling.
>
> Then his unworthiness did not affect him as a buyer?
>
> No. I held and hold to-day the impression that his "highfalutin" manner and habit of flattering people to the top of their bent has a disturbing effect, and is not calculated to inspire a buyer to buy.
>
> But it is calculated to inspire a seller to sell?
>
> Yes. Mr. Temple is a past master in that.

Our correspondence schools in the science of salesmanship should not overlook this "tip" from a country whose business methods we are too apt to undervalue.

The report of the Royal Commission on Divorce recommends marked liberalizing of the existing laws. In the present conspicuous position of questions of women's rights in general, the recommendation that husband and wife be placed upon an absolutely equal footing is naturally raised to prominence in the newspaper headlines; but this measure is only one of several changes of the highest importance recommended by the Commission. On the question of equality there seems to have been complete unanimity in the Commission; while on the most far-reaching of the recommendations in the direction of enlarging the grounds for divorce, a minority of three is recorded in opposition to the majority of nine. If the recommendations of the majority shall be embodied in law, divorce will hereafter be obtainable in England on five grounds other than adultery—wilful desertion for three years and upward, cruelty, incurable insanity after five years' confinement, habitual drunkenness found incurable after three years, and imprisonment under a commuted death sentence. In this country there will be few to doubt the wisdom of these provisions for relief from the marriage tie when it entails cruel and needless hardship.

The term Holy War, when used of the Mohammedan world, still connotes something awful and menacing to the Western imagination. In the last half-dozen years the Holy War, in connection with that other indefinite thing, Pan-Islamism, has been spoken of as a possible event which the European nations must guard themselves against. But there have been Holy Wars in Mohammedan countries in this period, and they have shown no apparent difference in the final outcome. The natives of Morocco have risen against the French in the name of the Prophet. The Turks in Tripoli gave to their fight against Italy a religious cast. But the French and the Italians have made their way just as if it were an every-day, secular war they were engaged in. A Holy War is no more effective than any other kind of war if there are no men and guns to fight it with. In Morocco, in Tripoli, in Persia, and now in Turkey, the Mohammedan world has come into conflict with European ambitions and has had to give way. The only thing the proclamation of a Holy War can lead to is the massacre of Christians. But experience has shown again and again that massacre, whether in Turkey or in Russia, has been brought about by orders from above. We doubt whether the Ottoman Government will run the risk of utter destruction by instigating slaughter which can do nothing to change the fortunes of the present war.

In French military circles much comfort is taken over one supposed lesson of the war in the Balkans. The fact that the training of the Turkish army was for years under the expert guidance of a German officer of high rank, and that the Turkish fortifications were erected under German supervision, is regarded in Paris as disastrous to the legend of German invincibility. In addition, there is the fact that the Bulgarian forces have been equipped with the same type of artillery that has been lately introduced in the French army, and have amply demonstrated its effectiveness. But it seems that the Balkans have repeated the lesson of Manchuria; the chances of war cannot be forecast by the mere weighing of population masses. Preparation, courage, dash, will enable a nation to defeat one twice its size. To that extent France, with her forty millions, need not lose heart at the thought of Germany's sixty-odd millions. But it is absurd to imagine that the parallel between Germany on the one hand and Russia or Turkey on the other can go any further. There are some who maintain that the famous German military discipline has gone stale. But no one asserts that the spirit of the nation is not as vigorous as it ever has been.

IS IT A "REVOLUTION"?

After every one-sided national election, many start up with confident remarks about a "political revolution." This year the temptation that way was obvious, and some are unable to resist it. Col. Watterson naturally leads the band of positive interpreters of the results, and, undismayed by his own sad record as a prophet, he undertakes to read the future. To his mind, the "revolution" is already an accomplished fact. The Republican party has fallen "into a heap of shapeless ruin." "It will never rise again." "The little that is left of it the Bull Moose will swallow." Everybody is familiar with this kind of writing. It is easy and picturesque, but is it not far too easy and too picturesque to be probably true?

We remember to have heard that sort of thing before. After the utter collapse of the Democratic party in 1872, with Greeley as candidate, there were equally glib and cocksure assertions that the result of the election was revolutionary and that the Democratic party was forever done for. It was spoken of as a "putrescent corpse." But in two years' time the corpse started into life vigorous enough to elect a majority of the House of Representatives, and again in 1876 to poll a greater popular vote for its Presidential candidate than the Republicans were able to muster. Great historic political parties are generally, like Fuzzy Wuzzy, shammin' when they're dead. A sword was, indeed, thrust into the vitals of the Whig party in the shape of the slavery question, which in like manner was presently to rend the country asunder. But will even the loudest-snorting Bull Moose pretend that there is any issue comparable to that one to-day dividing the Republican party and threatening it with destruction? Those with a memory recall that similar prophecies of speedy Republican dissolution were made after that party was smitten hip and thigh in 1892. In that year, too, Wisconsin and Illinois and other supposedly rock-fast States were carried by Cleveland, and in view of the astonishing election returns a veteran political observer felt justified in saying that the Republican party had all the marks of a dying party. In fact, however, it was soon to enter upon a long new lease of power.

The truth is that an established political party is a particularly tough organism, very hard to kill. The mortality rate of third parties is, indeed, alarmingly high—close upon 100 per cent., in fact. But the name and the banner to which millions of voters have been for generations in the habit of rallying, will not so easily disappear. The name, to be sure, may come to have new meanings. On the banner the mottoes and inscriptions will vary from time to time. But the historic continuity is not easily broken off. Children will keep on being born Liberal or Conservative, Democratic or Republican, no matter whether those party names have ceased to signify exactly what they did in the days of their grandfathers. It is obviously this almost infinite adaptability of parties that increases their chances of survival. At the very moment when they are said to be worn-out, exhausted, and fit only to be discarded, new elements of life and popular strength may be infused into them.

A terrible blow the Republican party has unquestionably suffered. But at present there is no convincing reason for asserting that it has met with more than a disaster, from which there may be recovery. The party has in other years shown too great a power of recuperation to warrant these hasty conclusions that it has now been "annihilated." It still has a hold upon the affections and loyalty of millions. It still numbers many able leaders and skilled politicians. We may be sure that they are not thinking of abandoning their party name, or of giving up hope. They will eagerly watch for opportunity to grasp the skirts of circumstance and to be carried back into power. Revolution for revolution, they will count upon one working in their favor in the course of years, and by the law of averages. If all else fails them, they will draw courage from their belief in the inability of the Democrats long to refrain from quarrelling and blundering.

No, "revolution" is too portentous a word to apply to what has happened. Some more moderate expression, such as readjustment or realignment, would more closely fit the case. That great party changes are before us is plain to the dullest. The Democrats cannot possibly hold the political strength which came to them through the nearly equal division of their opponents. They are certain to lose some States and many Congressmen in the elections of 1913 and 1914. And the great political question is in what shape and by what means the party of opposition may be reconstructed and made effective. To this problem, no man need have any doubt that the consummate politician at Oyster Bay is giving anxious thought. How if he should in time make approaches to the Republican leaders? How if he should open confidential communications with the Republican bosses? How if he should quietly prepare to "chuck" the Progressive party as such, and to carry over all of it that he could to the Republican ranks, on condition that he be made commander-in-chief of the allied forces in 1916? We are far from asserting that these things will occur. But they may occur. Various kinds of party rearrangement may be attempted; and if any of them succeed, even partially, we shall soon see how premature and absurd it is to speak of the election as meaning a "revolution."

JUDGES DO MOVE.

During the past few years the nature and functions of the judge have been discussed in this country with a freedom and even rudeness never known before. Extreme views on either side have been presented—too extreme to be credible; but in one rather moderate opinion there has been acquiescence by many who yet would not agree that judges are either saints or devils. This common opinion is that the judge, from the character of his training and of his work, is a being who dwells apart from the currents of thought and the turmoil that deeply affect his fellow-citizens. He is often pictured as an official who lives, as it were, in an apartment hermetically sealed, studying his cases and making his decisions with an eye solely upon precedent, and totally unaware of what is going on in the stirring world about him. Sometimes his sense of aloofness and of immunity from criticism is represented as a kind of selfish complacence; so Walter Bagehot jocosely described the appointed judge as saying to himself: "Thank Heaven, I can be removed from this office only by vote of both Houses of Parliament!" But the usual feeling is merely that the judges are set too far apart from the human interests of their time, and too indifferent to them. This view was sharply challenged not long ago by a former judge, W. H. Taft, who affirmed that no set of men were more sensitive than judges to the opinions of their fellows and the demands of the public.

In confirmation of this, several recent actions by the courts might be cited. There is, for example, that sweeping revision of the rules of procedure in the Federal courts, set forth the other day by the United States Supreme Court. As explained by Chief Justice White, to whose initiative and patient labor the reform is largely due, the new regulations will greatly facilitate the administration of justice. This will be made more speedy and less costly, while many abuses, such as the issue of injunctions without notice to the persons adversely affected, and without provision for an early hearing, are done away with. It is not the details, however, that we would now dwell upon, but the main fact itself. Here is a great step forward in the reform of judicial procedure, the work of judges themselves. In this instance, at least, it is not true that they were wholly ignorant of popular complaints, or indifferent to the need of devising and applying remedies for the things complained of. They went about the improvement cautiously, to be sure, and not by the methods of hurricane reform, but the point is that they did go about it and achieved it.

Even in the matter of judicial decisions there is evidence that the judges are awake to the need of modifying old rules of law in order to make them better fit modern conditions. Just before the election, there was a somewhat heated controversy—on one side—between Mr. Roosevelt and Mr. Root, with three or four other eminent lawyers. They alleged that in Mr. Roosevelt's criticism of certain decisions of the New York Court of Appeals, the law had been misstated and the exact ground and effect of the decisions misapprehended. The disputants did not really address themselves to the same point; but in his reply Mr. Roosevelt had the facts on his side when he asserted that, whatever may have been the case with the early decision regarding the assumption of risk by an employee, the latest decision by the Court of Appeals took a different and more humane view.

The case in question was that of Fitzwater v. Warren, which was decided on October 22. The opinions were printed in the *Law Journal* of November 4. The question of a master's liability for injury to a servant was involved, and, in brief, the decision was that "public policy precludes an employee from assuming a risk created by his employer's violation of a statute [for safety appliances, etc.] or from waiving liability of the latter for injuries caused thereby." In his majority opinion—two judges dissented—Chief Justice Cullen was very frank in admitting that the court had departed from its earlier doctrine. But he pointed out that the Federal courts had taken a different view of the law of employer's liability, and also that "the doctrine of the Knisely case had been largely qualified, if not virtually overruled," by a subsequent decision of the Court of Appeals itself. After the argument from the law and from cases cited, the Chief Justice closed his opinion with some striking words bearing directly upon the general matter we are discussing. Judge Cullen said:

> The statute which the defendants violated was enacted for the express purpose of safeguarding the persons of employees. Where an employer deliberately fails to comply with the statute the courts should be loath, except in a very clear case, to hold that the employee assumes the risk of his master's violation of the law. Otherwise the beneficent results sought to be attained by the statute will fail to be realized. There seems at the present day an effort by constitutional amendment to render a master liable to his employee for injury received in his employment, though the master has been guilty of no fault whatever, and I feel that such effort is in no small measure due to the tendency evinced at times by the courts to relieve the master, though concededly at fault, from liability to his employee on the theory that the latter assumed the risk of the master's fault.

Such a manifest readiness of the Court of Appeals to take cognizance of a visibly rising public sentiment, and to make old rules bend to new conditions, is a good thing for the country and a good thing for the judges. It shows them—what, of course, all people not blinded by passion knew them to be all along—to be as alive and humane as the next men. Even when the courts are compelled to make decisions which appear to go against the feeling of instinctive natural rights, they are careful to point out that it is the law, not their own desires, which they are expounding, and to indicate the changes in legislation which ought to be had in order to make the statute square with humanity. It is certain that it will need only a few more instances such as those we have mentioned—and they could doubtless be paralleled from the judicial records of many States—to make an end of the absurd conception that a judge is not susceptible to the aspirations of the men and women about him, and lives his life and does his work apart, as a sort of unnatural monster without either knowledge of his struggling fellows or a flicker of pity for them.

BALKAN DIPLOMACY.

For the moment Austria is the centre of interest in the Balkan situation. It is generally assumed that it is for Austria to decide whether the present war shall widen into a general European conflict. War or peace is in her making by the attitude she assumes towards Servian claims in the reshaping of the map of the Balkan peninsula. That such a process of reconstruction is at hand is taken for granted. It is to follow the final defeat of the Turks before Constantinople. As a matter of fact, until the final collapse does come, there is a large element of uncertainty in the game of territorial rearrangements that is now being vigorously played on paper. The Turk may not be stripped quite so bare of his European possessions as the allies have threatened. And, naturally, the more there is left to the Porte, the less there will be for the allies and other interested parties to divide. If Bulgaria, for instance, obtains satisfaction in Thrace, her allies will have a free hand in their respective spheres. If Bulgaria obtains less than she expected, she might be inclined to seek compensation in Macedonia, where Bulgarian, Servian, and Greek claims come into conflict.

But for the time being let us assume that Turkey is brought to her knees, that Constantinople, with a surrounding strip of territory, is all the Porte can save out of the ruin, and that the rest of her European possessions are to be carved out and distributed. How would this process be carried out if the matter rested entirely with the Balkan states, if Austrian ambitions, Russian ambitions, Italian ambitions, were left completely out of account? European Turkey to-day has a population of about 6,500,000. To Constantinople and its environs may be assigned a million and a half. There would thus be a population of some five millions to be redistributed politically, including more than a million Mohammedans divided into two great groups, the Pomak mountaineers of Thrace and Macedonia and the Mussulmans of Albania. The Christian population, numbering something less than four millions, and omitting such minor groups as Armenians and Wallachians, would show about 1,500,000 of Bulgarian race, about 1,000,000 Servians, and about 800,000 Greeks. The fact that these races dwell closely intermingled makes an exact reconstruction on ethnical lines impossible. But taking practical reasons into consideration, Bulgaria would receive her share of the profits on the Black Sea and the Ægean, and Greece would spread northward into Epirus and the neighborhood of Salonica.

When we come to Servia, we find that without outside interference her share would be the easiest one to define. The Serb population now under Turkish rule is concentrated in the Sanjak of Novibazar, which projects northward like a horn from the main line of the Turkish frontier, and is bounded on the east by Servia, on the west by Montenegro, and on the north, for a distance of some thirty miles, by Austria-Hungary. Were Servia to occupy Novibazar and close up the gap between its frontiers and Montenegro, Austria would be cut off from all possibility of future access to the Ægean, the accepted goal of traditional Austrian diplomacy. But even if Servia were to consent to Austrian sovereignty in Novibazar and seek compensation further to the south, in the direction of the Adriatic, as she is now doing according to report, the difficulty with Austria is not avoided. Any Servian approach to the Adriatic draws a bar straight across the line of the Austrian advance. There are alternatives. Servia might yield to Austrian threats and abandon her hope of finding an outlet to the sea. But that is unimaginable. Of the four Balkan states, Servia alone has no outlet to the sea. Even tiny Montenegro has the two ports of Antivari and Dulcigno. In view of the tremendous sacrifices the Servian people have made, and their splendid victory, it is impossible to suppose that they will consent to remain a landlocked nation, dependent for their economic well-being almost entirely upon the good-will of Austria.

There is one possible way out. Servia might search for her harbors, not on the Adriatic, but on the Ægean. Instead of putting herself square across Austria's path, she might march parallel with Austria southward. Salonica is exactly the same distance from the Servian frontier as San Giovanni di Medua, the Adriatic port which the Servians are reported to be coveting. Such an arrangement, it is true, presents many difficulties. It would produce a territorial gerrymander of extraordinary character. Instead of adding the compact natural territories to the southwest, with a predominant Serb population, it would be tying a thin, elongated tail to the Servian kite, presenting all kinds of difficulties of an administrative and military nature. Moreover, such a Servian advance to the Ægean would be crowding both on Bulgaria and on Greece.

Will, then, Austria consent to abandon her traditional policy? Will she give up her hopes of Salonica? That, likewise, is too much to expect. And yet it may be pointed out that Austria's aspirations towards a port on the Ægean were based on a state of affairs which has now disappeared. The problem as it presented itself to Austrian statesmen under the old conditions was probably something as follows: The rule of the Turk in Europe would recede, but gradually. Step by step Austria would move downward, from Bosnia into the Sanjak of Novibazar, from Novibazar into Macedonia, and so on to Salonica. As Austria moved southward, the humble Balkan people would be appeased with a bit of territory here and a bit there. But to-day that is out of the question. The Balkan states will not allow the outsider to run off with the lion's share of the spoil. Servia will insist on a substantial slice of the Turk's dominion. So will Greece, coming north to meet the Servian expansion. Even if a narrow pathway should be left open for Austria to Salonica, what strategic value would it have with the Balkan states camped on either flank? With the Balkan states united and flushed with victory, Austria's approach to the Ægean would be very much like a runner with the ball dodging his way across a football field, always in danger of being tackled and thrown.

MR. BRYCE'S RETIREMENT.

Mr. Bryce is an Englishman, but he is at the same time about the most popular American. When we stop to think of him officially, we remember that he is British Ambassador, but nothing can now prevent this country from regarding him as, somehow, an American institution. We can imagine another man in the British Embassy at Washington, but Mr. Bryce cannot be supplanted as a sort of life-ambassador to this nation, which he so wonderfully understands and which he has so greatly helped to understand itself. The announcement of his coming retirement inevitably causes wide regret. This is somewhat lessened by the assurance that his resignation is not to take effect at once. He wishes to leave the diplomatic slate clean for his successor, and may continue in Washington till the new President comes in. He passed some time ago the age-limit for Ambassadors in the British service; but his home Government was wise enough to see that years do not count in the case of a mind so alert and energetic as his, and made an exception in his favor. The exception was really in favor of this country, to which no higher compliment could have been paid by England than sending Mr. Bryce to Washington.

Recent dispatches from London intimate, what has been well known, that the English Conservatives, with some of their most powerful organs in the press, have taken a highly unfavorable view of Mr. Bryce's diplomatic career. This attitude has been, in part, a result of the bitter party warfare in England. Mr. Bryce was not a regularly trained diplomat. He entered the service late and at the top. He had been an active and eminent Liberal, and it was perhaps not unnatural that a dead set should have been made at him by his political opponents when he left the Cabinet to become Ambassador. At any rate, a Tory newspaper campaign was early begun against him, and has been pretty steadily kept up. It started off at what Swift called the standard of stupidity, by alleging that Mr. Bryce was not tactful in his dealings with Americans. The London *Times* had a portentous cabled account of the way in which the British Ambassador, by not going to a gathering in Pittsburgh where the German Ambassador was present, had allowed Germany to take first place in American affections. But this sort of stuff was soon perceived to be too ludicrous, and the attack was shifted to Mr. Bryce's efficiency in his official work. Charges of varying degrees of silliness have been made in the English press and aired in the House of Commons. They have been mèt by the most precise denials on the part of Sir Edward Grey, and the confidence of the Ministry in Mr. Bryce has been unshaken; but it is obvious that repetition of the accusations has tended to give them a certain weight with a portion of the British public.

What has been alleged is that Ambassador Bryce has not stood up stoutly enough for the interests of his own country; that he did not closely enough watch American machinations against Canada (we are giving the Tory point of view); and that he allowed himself to be overreached in diplomatic agreements. But to any one familiar with the facts, these charges fall of their own weight. Mr. Bryce is a keen man of business. He is not so foolish as to imagine that a diplomat can win every point, but both Roosevelt and Taft, as well as Secretaries Root and Knox, would bear witness to the truth that Mr. Bryce has been as resolute as any Ambassador ought to be in maintaining every essential contention by his own Government. The only instance in which there was the slightest color for the charge that Mr. Bryce had been neglectful, or had been deceived, was the case of the Canadian reciprocity agreement. But his Tory critics overlook the fact that he was not and could not be a party to that negotiation. Canada kept it jealously in her own hands. She would have brooked no English interference with her fiscal freedom. Mr. Bryce's duty was limited to reporting what was being considered and what was finally done. He did not know, and no one was able to conceive, of Mr. Taft's writing that fearfully indiscreet letter to Col. Roosevelt about making Canada an "adjunct" of the United States. If writing it was a huge blunder, publishing it later was well-nigh a diplomatic crime. Mr. Bryce, though wholly blameless, no doubt suffered from it in England. But in general it may safely be asserted that his official work has been as successfully performed, in its own way, as his greater mission of unofficial intermediator.

How ably and delightfully he has played this last rôle, it is needless to argue in detail. No speaker on public occasions has been so much sought after as he. Before the American Bar Association, before historical and antiquarian societies, at chambers of commerce and at colleges, he has made addresses as a welcome and honored guest; and throughout the land has made himself known to all sorts and conditions of men as a friend of this country, intelligent enough to admire her and brave enough to point out her shortcomings. In view of all this, it is simply laughable to read the Tory complaints that Mr. Bryce has not been a success in this country! Ask his diplomatic colleagues, above all, ten years from now, ask his successor, who will be a lucky man if, after prolonged and arduous labor, he is able to attain one-tenth part of the influence which Mr. Bryce had from the beginning of his Ambassadorship, and has since constantly increased.

Although we must make up our minds to part with Mr. Bryce, we shall know that his friendship for this nation will continue undimmed, and that his amazing knowledge of our affairs will induce him to follow our future attempts to solve the present democratic problem with intense and unfailing interest. Retirement can mean for him only a change of mental activity. His eagerness for information, and his power of interpreting it philosophically, will go with him into his days of greater leisure, and will keep on making of his conversation and his writing that fine blending of instruction and charm which they long have been. Unbent by the weight of years, with a memory still wax to receive and marble to retain, so that all his vast stores of knowledge are readily at command, with hope for the world unquenched in his heart, the stoutest of convinced optimists, Mr. Bryce may go on giving us, when freed from official cares, incisive studies and rich comments on the march of democracy.

PRINTS IN BOSTON.

The announcement made by the Boston Museum of Fine Arts relative to the reorganization of its Print Department, and to a plan for closer coöperation with Harvard University in recognizing the educational value of the engraving arts, is sufficiently interesting and important. "The United States should possess a print collection worthy of comparison with the great collections abroad, and it is felt that the Boston collection offers the best field for development." So speak the Museum authorities, and they announce the appointment of a new curator of the department, Mr. FitzRoy Carrington, of New York, to carry out this great undertaking. It has a national no less than a local significance. Indeed, this national aspect is already emphasized by the further statement that "the Department will be well equipped to coöperate with print collectors both here and elsewhere, and it is hoped that a national society of print collectors in America may be the outcome of the organization."

So far, print collections in American public institutions have received their accessions for the most part through gifts by private individuals. The result has been that their growth has been more or less governed by considerations of personal taste, and that they are thus rarely representative of the engraving arts as a whole. The time has obviously now come for the museums to undertake constructive work on a more extended scale than ever before, and to bring their collections to a point of completeness where they will be of real service to the serious student. It will not be necessary in every instance to have the finest proof of any given etching or engraving; but a good proof should so far as possible be procured of every important plate. The student should have access to a full documentary record of every master mentioned in the standard textbooks.

This is apparently the aim of the Boston Museum, which has already made a good beginning in this very direction, as was noted by Dr. Wilhelm Bode on the occasion of his recent visit to America. It is stated in the *Bulletin* that "the Print Department of this Museum has now more than sixty thousand prints, a collection which shows the history of the art from its beginning, and contains examples of the work of all the great masters." Doubtless contributors to the large endowment fund which is now being raised, who live in other cities, see in the excellent nucleus thus provided an advantage on the part of Boston to offset other advantages offered by cities like New York and Washington as centres for a great national collection of prints, and as radiating points for a nation-wide effort to foster their appreciation. But Boston itself possesses still further advantages, not least among which are the position it holds historically as a leader in intellectual and cultural movements, and its proximity to Cambridge. There is no other American university whose fine arts department is so well organized as Harvard's. In the combined treasures of the Boston Museum and the rich Gray collection at the Fogg Museum, the Harvard student will have unparalleled facilities for the study of prints; and in Mr. Carrington, who will both lecture at the University and talk informally to students in the galleries of the two museums, he will have an instructor thoroughly trained in the knowledge and appreciation of his subject.

For twenty years Mr. Carrington's work has lain in this field, and, while his experience has been mainly commercial, a business like that of print-selling involves so considerable and so constant an exercise of the critical faculty that it is difficult to see what training could better fit a man for academic duties. As for his more purely technical work at the Museum, Mr. Carrington has long been known as an expert authority on prints, and is undoubtedly well qualified to become curator of a great collection; while the active part he has taken in the educational propaganda inaugurated by the late Frederick Keppel as part of his business policy, should be of great assistance to him in conceiving and carrying out plans to increase the number of print lovers in America, to organize them, and to direct their efforts. To help him in this, he will have the *Print Collector's Quarterly*, which he started two years ago, and which, it is understood, will hereafter be published by the Museum with the guarantee of a friend. Under these auspices, this magazine, which already occupies the field alone in this country, should greatly increase the scope of its usefulness.

We see no reason why the Boston enterprise, to whatever proportions it may grow, should not rather encourage than discourage plans for similar extension and university coöperation elsewhere, in any city which is so fortunate as already to possess a college and the nucleus of a print collection. Such collections may be rendered of high advantage to a community by development along the right lines. This would entail no vast expenditure, as does the accumulation of a representative collection of paintings, or even of drawings by great masters. It does require, however, a certain moderate outlay, and one of the lessons of the new Boston venture is the need, on the part of museums and libraries, not only of gifts, as heretofore, of fine private collections of prints, however limited in range, but of endowments as well to permit custodians and curators to purchase prints in accordance with a fixed scheme shaped to meet the requirements of individual institutions. Doubtless some part of the fund which is being raised by the friends of the Boston Museum to make it possible to add Mr. Carrington to its staff, is to become available for such uses, and it is to be hoped that the example will serve as an incentive to those who have the good of our other great galleries at heart.

BERGSON AND ROUSSEAU.

Perhaps the two men most talked and written about internationally of late have been Rousseau and M. Bergson. The world has, to be sure, just been celebrating the bicentenary of Rousseau's birth; but quite apart from the bicentenary there has been a constant stream of books and articles for years past, nearly all designed to show that Rousseau is, in Amiel's phrase, an ancestor in all things. The *Revue de Métaphysique et de Morale* recently devoted a special double number to a symposium on this very theme. To what extent does Rousseau embrace in his universal influence M. Bergson and his philosophy? No one of the distinguished foreign and French contributors to the Paris symposium, nor, so far as I am aware, any one else, has spoken clearly on this point. Yet this relationship would seem worth establishing, even though M. Bergson may not prove to be, as one of his admirers recently asserted in the *Revue des Deux Mondes*, a more important philosophical figure than Kant, and probably as important as Socrates. Like other thinkers, M. Bergson can be understood only with reference to his background—the previous ideas that he is continuing or from which he is reacting.

I.

In any case what he is reacting from is perfectly clear. The so-called anti-intellectualist movement* of which he is the leader is a protest against the scientific dogmatism that reached its height during the second half of the nineteenth century, a sign that the world is growing weary of a certain type of naturalistic positivism and its attempt to lock up reality in its formulas. The walls of that particular prison house of the spirit are plainly crumbling. Parts of the edifice have been collapsing of late with almost dramatic suddenness. M. Bergson's attack has been directed mainly against the pretensions of pure science to impose its methods on the study of the living and the organic. But even in the field of inorganic science itself points of view are appearing that would, if accepted, be in some respects a menace to the whole structure, the foundation of which was laid by Kepler and Galileo, Newton and Descartes. The "relativists," for example (of whom the chief is, perhaps, Mach of Vienna), have been arriving at novel conclusions regarding certain underlying conceptions of physics. What has been going on among the mathematicians may be inferred from the title of a recent volume—"Mysticism in the Higher Mathematics." The late Henri Poincaré put his emphasis on intuition rather than on intellect even in geometry (though the geometry was to be sure non-Euclidean).

There can be no doubt as to the shrewdness of some of the blows that M. Bergson has delivered at what one may term scholastic science. The danger is, of course, manifest that men may argue from the abuse of the intellect by certain pseudo-scientists of the mid-nineteenth century, a Herbert Spencer, let us say, or a Taine, against its legitimate use in scientific inquiry. The scientific intellectualists, especially the Darwinians, are as a matter of fact rallying briskly to the defence of their position against M. Bergson.

I have, however, neither space nor competency to discuss the bearings of the anti-intellectualist movement on science, whether organic or inorganic. My interest is in the contention that Bergsonism and similar tendencies are on their constructive side "humanistic" or "religious";* for both epithets have been applied to them. For example, a recent writer in the *Deutsche Rundschau* entitles an article on the contemporary French philosophical movement (he enumerates more than twenty leaders, of whom M. Bergson is only the best-known internationally) "The Renascence of Idealism in France." I am going to examine M. Bergson briefly from this point of view, admitting that he does not represent the whole of the movement.

M. Bergson's aim, as he himself would define it, has been to rid philosophy of

every form of the metaphysical illusion (including the scientific form) and so to make it vital—an aim that is in itself highly laudable. With the older type of metaphysician ordinary mortals felt that they had very little in common; they could at most address to him the Virgilian query:

> Quid struis? aut qua spe gelidis in nubibus haeres?

But the philosophers of late have been coming out of their chilling clouds of abstractions. If, on the one hand, they have been breaking down the barriers that separate them from science, on the other, they have been growing literary, so literary, in fact, that the time would seem to have arrived for the men of letters to return the compliment and become to the best of their ability philosophical.

The literary critic especially should be willing to meet the philosopher at least half way, if, as I believe, both are confronted at present by the same central problem. For to inquire whether the critic can judge and, if so, by what standards, is only a form of the more general inquiry whether the philosopher can discover any unifying principle to oppose to mere flux and relativity. We are told by the new school that any attempt to unify life in terms of the intellect and impose on it a scale of values, is artificial. We must oppose to this artificial unity our vivid intuitions of change, of the infinite otherwiseness of things. Now, however little we may accept the whole of this thesis, we must grant that M. Bergson—and James, it seems to me, even more than M. Bergson—has rendered a service to philosophy in thus turning its attention to what Plato would have called the problem of the One and the Many. Most people, James admits, do not lose much sleep over this problem, yet he is right in thinking that all other philosophical problems are insignificant in comparison. If philosophy once gets firmly planted on this ground, it may recover a reality that it has scarcely had since the debates of Socrates and the Sophists. Instead of the intricate fence with blunted foils to which the intellectualists have too often reduced it, we may once more see the flash of the naked blade.

In his own dealings with the problem of the One and the Many M. Bergson is evidently not a new Socrates, as the writer in the *Revue des Deux Mondes* suggests, but rather a new Protagoras. But in the actual form that the philosophy of the flux assumes in him, he reminds us even less of the ancient sophists than of Rousseau. James, indeed, would have it that M. Bergson reminds us of no one. "Open Bergson," he says, "and new horizons loom on every page you read. It is like the breath of the morning and the song of birds. It tells of reality itself, instead of merely reiterating what dusty-minded professors have written about what other previous professors have thought. Nothing in Bergson is shop-worn or at second hand." All this exaltation of M. Bergson's spontaneity has itself a highly Rousseauistic flavor. What one always finds in Rousseauism is the thirst for immediacy as compared with something that is secondary, artificial, conventional. Moreover, one gains this fresh contact with reality, not by rising above the ordinary intellectual level, but by sinking below it, though the Rousseauists have employed a thousand pseudo-mystical devices to convince themselves and us of the contrary.

Now, M. Bergson is plainly a Rousseauistic primitivist, in that he would have us get our vision of reality by looking downward and backward instead of forward and up. The opposition he establishes between concepts and percepts, between intellect and intuition, is nothing but Rousseau's old opposition between thought and feeling, the head and the heart. The good Bergsonian must come to feel like Rousseau, that his "head and heart do not seem to belong to the same individual." Anything he can attain intellectually he is to regard as artificial, secondary, conventional, to be justified not philosophically but only practically (it will be observed that M. Bergson abandons both thought and action to the utilitarians). If a man would become philosophical, he must turn his back on both the intellectual and the active life, and "intuit" the creative flux; he must twist himself around, in M. Bergson's own phrase, and peer down into the vast swirling depths of the evolutionary process. He then sees life as it is, a pure process of motion and change, no longer artificially immobilized by the intellect.

II.

To the student of the romantic movement M. Bergson's constant insistence on intuition as opposed to intellect will seem very familiar. The whole movement from Rousseau down is filled with the preaching of the vital and the intuitive and the spontaneous, with protests against those who would, in Carlyle's phrase, convert the world "into a huge, dead, immeasurable steam-engine." The similarity here between M. Bergson and the German romanticists, between him and Schopenhauer, etc., has been pointed out. I should like to show, if I had space, that Goethe, in his warnings against the over-intellectualizing of science, also anticipated M. Bergson at his best. The pretension of the intellectualist to imprison both nature and human nature in his formulas is, as a matter of fact, intolerable. Taine offends as gravely in this respect as those earlier rationalists from whom Carlyle and the German Rousseauists were reacting. Taine would reduce man, to quote his own words, to a "problem of mechanics," to a "living geometry," whose formula may be worked out and whose future may be predicted from his present in such a way as to eliminate time as an effective factor. But we must not, says M. Bergson, thus impose the geometric upon the vital order, or, what amounts to the same thing, confound the mechanical and spatial with the temporal. For the vital and the organic "time is the very stuff of reality," accompanied as it is by a "constant gushing forth of novelties," unpredictable from the platform of intellect. M. Bergson's treatment of time and of the rôle of time is perhaps the most original part of his philosophy.

But why are we forced to get our glimpse of reality by looking backward and downward instead of forward and up? Why can we not effect our escape from intellectualism by rising above it as well as by sinking beneath it? M. Bergson replies that to grasp what is above the ordinary intellectual level would require a special order of intuitions, and that, according to Kant, no such intuitions exist. But perhaps, in a matter of this gravity, it would not be well to trust too implicitly to Kant. If it is a question of citing authorities, we have Plato and Aristotle on the other side, supported, one is tempted to add, by the immemorial wisdom of the human race. "After reading Bergson," says James, "I saw that philosophy had been on a false scent ever since the days of Socrates and Plato." On the contrary, to get back to Socrates and Plato and Aristotle might be the best way of recovering the great tradition in philosophy after many years of wandering in the romantic wilderness; for these men, instead of being mere intellectualists, as M. Bergson is constantly assuming, put their final emphasis on intuition at least as much as he does—only the intuition in which their philosophy culminates is not of the Many, but of the One. In working towards this type of intuition the soundest method may still prove to be the Socratic and Platonic method of definition. Instead of reducing the intellect to a purely utilitarian rôle, as M. Bergson does, we should employ it in multiplying sharp distinctions and then put these distinctions into the service of the character and will. These sharp distinctions are, as it were, the railings on either side that protect a man in the toilsome ascent from the lower levels of his being and keep him from being precipitated into the outer void. The very word intuition is much in need of being defined, that is, divided and subdivided, Socratically. Good sense itself, according to Dr. Johnson, is intuitive, and this is a form of intuitiveness of which we stand in special need at the present crisis, for this word would scarcely seem too strong to apply to a time when the philosophy of the flux is proclaimed so confidently and received with such applause. This naturalistic vertigo seized upon Greek society at the very height of its achievement and marked the first downward step towards the abyss. "Too many of our modern philosophers," says Plato in words that might have been written to-day, "in their search after the nature of things are always getting dizzy from constantly going round and round, and then . . . they think there is nothing stable or permanent, but only flux and motion."

M. Bergson himself admits the kinship between a philosophy of pure motion and vertigo. "In vertigo," says James in turn, "we feel that motion *is*." Perhaps that is why Rousseau, as readers of the "Confessions" will remember, deliberately courted giddiness by gazing down on a waterfall from the brink of a precipice (making sure, first, that the railing on which he leaned was good and strong). One might fairly, indeed, bring against Rousseau the charge that Aristophanes brought unjustly against Socrates—that of being a worshipper of the god Vortex. Faust himself is only a good Rousseauist, and at the same time a forerunner of the modern point of view in philosophy, when, having despaired of dealing rationally with the problem of reality, he dedicates himself to vertigo (*dem Taumel weih' ich mich*).

Now, we not only can define Socratically other forms of intuition besides this giddy "intuiting" of the flux, but we can bring to the support of our definitions a wealth of concrete illustrations that was not at the command of the Greeks. When Pascal, for example, says that "the heart has reasons of which the reason knows nothing," he evidently refers to the superrational intuitions. When La Rochefoucauld, on the other hand, says that "the head is always the dupe of the heart," he no less plainly refers to the region of impulse and instinct in human nature that is below the rational level. One might again so compare Rousseau and Pascal as to show that, though both writers make everything hinge upon the "heart," they attach to the word entirely different meanings, because they use it to describe entirely different orders of intuitions.

We might deal in a similar fashion with M. Bergson's assertion that we should strive to see life not *sub specie æternitatis*, but *sub specie durationis*. Let us cite a few examples of the opposite doctrine from the most diverse sources. "The sage is delivered from time," says Buddha. "Happy is the soul in which time no longer courses," says Michael Angelo. In "the core of God's abysm," says Emerson,

> Past, Present, Future, shoot
> Triple blossoms from one root.

And so we might go on indefinitely lengthening the list of those who have found their supreme reality not in time, but in transcending time. For M. Bergson past, present, and future also melt together, but not as a result of transcending time, but, on the contrary, of plunging into it more deeply. He would have us feel time directly in its continuous flow and forget the artificial divisions imposed upon it by our "meddling intellects." M. Bergson's "direct vision" of time is, as a matter of fact, difficult to distinguish from the revery towards which Rousseau aspired—a point that might be made clear by a comparison of his Oxford lectures* with the fifth "Promenade." *Il s'agit*, says M. Bergson, *d'un présent qui dure*. In the ordinary enjoyments of life, even the keenest, says Rousseau, "there is scarcely an instant when the heart can say to us: I would that this instant might last forever" (Cf. "Faust"). But revery is a state "in which the present lasts forever" (*où le présent dure toujours*), and in which the soul suffers from "no void that it feels the need of filling."

To attempt to transcend time is, according to both James and M. Bergson, to fall inevitably into the metaphysical illusion. In general, everything that makes for unity is, according to these philosophers, dead, inert, merely conceptual. Readers of the *Nation* will remember the paper† in which James, adopting Taine's identification of the classic spirit with the spirit of abstract reasoning, concludes that the only way to be vital is to be romantic, that is, to expand from the One to the Many, or, as we may say, to fly off the centre. According to M. Bergson, the process by which one grows vital is not merely expansive, but "explosive."

III.

The underlying assumption of M. Bergson and other recent philosophers that a man becomes vital only by expanding from the One to the Many, only by moving from the centre towards the periphery, will not, as a matter of fact, bear serious scrutiny. The process of moving towards the centre may be just as intuitive and vital and also just as "infinite." For though a man may move towards the centre, he can never within the bounds of finite experience reach it. The romanticists have been assuming for a century or more that they have a monopoly of all the imagination and intuition. They have accorded at most to the classicist the possession of reason. But if a genuine classicist should appear in our midst he would agree with Rousseau that "cold reason has never done anything illustrious." In his warfare on romanticism he would oppose enthusiasm to enthusiasm and intuition to intuition. The way is open for a swift flanking movement on the whole romantic position. A man may, however, we must admit, make the proper distinctions and do all in his power, and then, instead of attaining "theory" in the Aristotelian sense (that is, immediate vision), he may not get beyond theory in our sense, and so become a fair target for M. Bergson. We are simply forced to say, in Joubert's quaint phrase, that some men's heads have no skylights in them.

Nor do we get round this difficulty by following M. Bergson. The sum of his message is that we should be æsthetically perceptive, that we should try to see life as the great artists see it. But it is no more given to the ordinary man to be as æsthetically perceptive as Keats, let us say, than it is to be as spiritually perceptive as Emerson. The enterprise in either case is of somewhat the same order as that of adding a cubit to one's stature.

We should not, however, spend too much time brooding on what would once have been called the mystery of grace. We should rather fix our attention on the feasibility of adding something by our own efforts to both our spiritual and æsthetic perceptiveness. For æsthetic perceptiveness is a precious thing if only it be directed to some adequate end. Right here it seems to me, is the fundamental weakness of M. Bergson. We are to perceive, in his own phrase, purely for the pleasure of perceiving. It is not we who are spontaneous in this system. We are merely privileged at most to contemplate the spontaneity of nature within us and about us, its expansive or "explosive" processes, without knowing whether these processes are moving towards any goal, or, if so, whether the goal is one with which we can concur. We do not, as the saying is, know where we are going, but merely that we are on the way. One might suppose that a spontaneity more worth having would be that of the individual who reacted upon his vital "urge," and imposed upon it the yoke of a human purpose. "Life," M. Bergson replies, "can have no purpose in the human sense of the word." It is hard to see how even its admirers can claim virility for a philosophy that would have us turn away from both thought and action and seek our vision of reality in an aimless æstheticism. It is at just the opposite pole from the philosophy of Aristotle, with its emphasis on acting with a purpose, a purpose, moreover, that is linked intuitively by a series of intermediary purposes with the supreme and perfect End itself. For if the intuition of the Many makes itself felt as vital impulse (*élan vital*), the intuition of the One is felt rather as sense of direction, as inner form, as vital control (*frein vital*).

**La Perception du changement*. Clarendon Press, 1911.

†*Nation*, March 31, 1910.

IV.

Those who exalt vital impulse and deny vital control may, as I have said, simply err from lack of light. But they may do so for another reason that is far less flattering to human nature. "Most persons," says Aristotle, in his downright fashion, "would rather live in a disorderly than in a sober manner." The ordinary man, says Goethe in a similar vein, prefers error to truth because the truth imposes limitations and error does not. But the ordinary man is not going to do anything so crude and inartistic as to admit such a preference either to himself or to others. In lieu of the reality of truth, he would like at least to have its specious semblance. Here lies the everlasting opportunity for the sophist and the pseudo-idealist. The world, as the Latin adage puts it, wishes to be deceived (*vult mundus decipi*). The idea of decorum, as worked out under Jesuitical auspices, did something to satisfy this permanent need of human nature. Perhaps the last triumph of the *genre* was Talleyrand, whom Napoleon described as "a silk stocking filled with mud." Rousseau attacked and overthrew this conception of decorum, but only to set up a still more fetching form of pseudo-idealism. "You wish to have the pleasures of vice and the honor of virtue," said Julie to Saint-Preux in a moment of unusual candor. Saint-Preux would indulge his lower impulses and at the same time pass as a noble enthusiast. He would live in a universe with the lid off, to borrow an elegant image from the pragmatist, and yet be accounted "spiritual." Rousseauism on this side may be defined as the art of throwing a pseudo-idealistic glamour over unrestraint; or, in Lasserre's phrase, as the rapturous disintegration of human nature. You remain uncurbed (to take the form of this disintegration with which we are most familiar at present) but make up for it by clamoring furiously that curbs be put on other people. You enjoy the illusion of reforming society instead of settling down to the sober reality of reforming yourself. Lacking the substance of a thing, you at least go through the motions and flaunt your *panache* confidently in the eyes of the world.

The ancient tradition of the world is that wisdom abides with the One and not with the Many. In seeking to persuade men of the contrary, M. Bergson is holding out to them the hope that they may become wise by following the line of the least resistance, that they may grow "spiritual" by diving into the flux. Why the pathway that M. Bergson opens into "reality" should prove so alluring to the men of the present is obvious. Men are now devoting their active intellectual powers to building up a vast machinery, and then manipulating it to practical ends. The intellect is properly employed in this way, says M. Bergson reassuringly, being as it is an obstacle rather than an aid to "vision." A man, we are to believe, may devote all his mental energy to the stock market, and yet be numbered with the sages, if only he succeeds in his odd moments in immersing himself in *la durée réelle* and listening, in M. Bergson's phrase, to the "continuous melody of his inner life." The romantic æsthetes and the utilitarians, the two classes of persons who have most flourished during the past century, are both flattered by this solution of the difficulty. The romantic æsthete that often co-exists with the utilitarian in the same man is flattered. The Bergsonian philosophy is indeed in its essence an ingenious *modus vivendi* between æsthetes and utilitarians. Like the kindred philosophy of James, it may be best described, to borrow the title of M. René Berthelot's book on M. Bergson, as *un Romantisme utilitaire.*

Let me repeat that I am not attempting in this article to do justice to M. Bergson's philosophy as a reaction against scholastic science. I have not emphasized, as I might have done, its striking originality in details. I have merely tried to show that in its general emotional expansiveness it is a late birth of Rousseauistic romanticism, and as such allied with all that is violent and extreme in contemporary life from syndicalism to "futurist" painting. It would seem to encourage rather than correct the two great permanent maladies of human nature—anarchy and irrationality. In so far, instead of being humanistic or religious, it is at the opposite pole from humanism or religion.

IRVING BABBITT.

NEWS FOR BIBLIOPHILES.

While reading the new edition of Beaumont and Fletcher in the Cambridge English Classics, I was struck by the frequent employment of *ye* for *you* in "The Loyal Subject," which is one of the plays attributed to Fletcher alone, and it occurred to me that this usage might afford a supplementary aid to distinguish his work from that of his various collaborators. The test, so far as I have carried it out, has justified this expectation. Fletcher uses *ye* for both numbers and cases, and in both serious and comic scenes, with great frequency, and is distinguished by this mannerism from, at least, Shakespeare, Beaumont, Jonson, Massinger, Middleton, Field, and W. Rowley.

A good illustration of the value of the test in confirming the accepted attribution of parts in a collaborated play is offered by "The False One." Of this tragedy, Prof. G. C. Macaulay ("Cambridge English Literature," Vol. VI, chap. v, appendix) ascribes acts i and v to Massinger, acts ii, iii, and iv to Fletcher. A count of the *you's* and *ye's* results as follows: Act i, 55 *you's*, 0 *ye's;* act v, 30 *you's*, 1 *ye;* act ii, 61 *you's*, 31 *ye's;* act iii, 34 *you's*, 36 *ye's;* act iv, 47 *you's*, 45 *ye's*. The number of *ye's* here, in acts ii, iii, and iv, is characteristic of Fletcher, although the ratio often falls considerably lower. The other plays I have tested are as follows:

"Wit at Several Weapons." This is ascribed in the "Epilogue at the reviving of this Play" to Fletcher in part, and it was included in the first and second folios of Beaumont and Fletcher. It is ascribed by Macaulay probably to Middleton and Rowley, and this ascription is confirmed by the *ye* test, in so far, at least, as there are no signs anywhere of Fletcher.

"The Maid in the Mill." According to Macaulay, acts i; iii, 2 and 3; v, 2 (a), were written by Fletcher, the rest of the play by some one else, probably Rowley. The test distinguishes Fletcher's work clearly. Thus, iii, 1 (to "Enter Lisauro"), has 16 *you's*, 0 *ye's;* the rest of the scene (apparently Macaulay's "scene 2") has 25 *you's*, 19 *ye s;* iii, 2 (apparently Macaulay's "scene 3"; there are only two scenes as printed in the folios), has 55 *you's*, 59 *ye's;* v, 2 (to "Enter Antonio"), has 38 *you's*, 34 *ye's;* the rest of the scene has 73 *you's*, 0 *ye's*.

"Valentinian" is by common ascription and by the *ye* test, all Fletcher's.

"Bonduca." This is attributed by Macaulay to Fletcher and Field, but by the *ye* test would belong entirely to Fletcher.

"The Bloody Brother." According to Macaulay acts i and v, 1, belong to Massinger; ii, 3, and iii, 1 (part), 2, and v, 2, to Fletcher; ii, 1, 2, and iv, 1, 2, to Jonson; iii, 1 (part), and iv, 3, to Field. By the *ye* test there is no sign anywhere of Fletcher. Possibly the whole text was revised by Massinger or another.

"The Honest Man's Fortune." Macaulay divides, "apparently," as follows: Tourneur, i; Massinger, iii, 1; Field, iv; Fletcher, v; the rest doubtful. According to the *ye* test, act v is Fletcher's; acts iii and iv show no sign of his work; acts i and ii have a few *ye's*, but a lower ratio than is charteristic of Fletcher.

"The Two Noble Kinsmen." The title page of the quarto (1634) gives this play to Fletcher and Shakespeare, and it is included in the second folio of Beaumont and Fletcher. Critics are now pretty generally agreed that Fletcher wrote part of the play, but the name of his collaborator is still in dispute. I may say for myself that I cannot conceive the style of the non-Fletcherian scenes to belong to the mature Shakespeare; the pregnant, allusive, crowded language points, in my judgment, more strongly to Chapman than to any other writer of the day. While going through this play I marked the words which seemed to me more or less uncommon. On counting them up I found the number to be thirty-six, and all of them, with the exception of "greise," evidently a misprint, fell in the non-Fletcherian parts. This eccentricity of diction again points to Chapman, although I have not looked for these particular words in his acknowledged plays. But this by the way. Macaulay ascribes to Fletcher acts ii, 3, 4, 5; iii, 3, 4, 5, 6; iv, 1, 2; v, 2, and parts of other scenes. The *ye* test, on the whole, confirms this division, but with the following exceptions: ii, 4, has neither *you* nor *ye*, but it consists of only a single speech; ii, 5, is non-Fletcherian; iii, 3, is non-Fletcherian; iv, 2, has no *ye's*, but is short; v, 1 (the first 19 lines), would belong to Fletcher.

"Henry VIII." According to the *ye* test the following parts belong to Fletcher: i, 4, ii, 1, 2; iii, 1, 2 (from "Exit King"); iv, 1, 2; v, 3, 4, 5. Short and indeterminate scenes are i, 3, and v, 2.

The test when applied to the mixed work of Beaumont and Fletcher gives curious results. "Four Plays," which is, as the name indicates, made up of four independent pieces, shows a small percentage of *ye's* in the first and second Triumphs, and a high percentage in the third and fourth. This falls in with the common opinion which attributes the first two Triumphs to Beaumont and the latter two to Fletcher. But in the plays which are units, such as "The Maid's Tragedy," "Philaster," "A King and No King," "The Knight of the Burning Pestle," and "The Coxcomb," the mark of Fletcher does not occur at all. It should seem that the writing here, at least in its final form, was almost entirely Beaumont's.

So far only I have carried the investigation; nor, I confess, have I gone through the literature of the subject to see whether any curious reader has forestalled me in the suggestion. So far as I remember, it has not hitherto been made. Possibly some one else, who has more time and inclination for this kind of work than I have, may push the test further, and may be able to draw nicer inferences as to the way in which Fletcher collaborated with the various dramatists of the age. One larger conclusion, at least, seems clear. the text of these plays must be pretty close to the form in which it was actually written down by the author; for if there were much revision by copyist or printer, this minute distinction of style would not have been preserved. The frequency of the *ye's* does not seem to depend on the printer of the first or second folio of Beaumont and Fletcher, or of any of the separate editions, and it remains virtually unchanged for each play.

P. E. M.

Correspondence

A NEW THING IN AMERICAN POLITICS.

To the Editor of The Nation:

Sir: To-night it was given to Princeton men to celebrate the election to the Presidency of a man whom they have cherished long as one of their own, and have supported as a comrade and leader embodying a character new in American public life. No one who stood to-night among the crowd of Princeton men before Mr. Wilson's house and listened to his quiet words could have failed to believe that a movement has begun in American politics of the loftiest promise.

We have seen a man who had lived in retirement and simplicity, given over to scholarship and critical reflection, rise by virtue of native reason and strength and fineness of character to national fame—have seen him by these qualities win the confidence of a numerous people which has not hitherto been conspicuous either for trust or for interest in the type of philosopher-statesman. In the comparative seclusion of Princeton, which would seem to afford but little field for the development of the "man of action," he has grown to be one who has proved to Americans that to increase and deepen knowledge is not to enervate the will; that high principles championed in the academy may be put into instant and vigorous execution if the people but yield their trust; that courtesy, reason in debate, and open-mindedness are not necessarily incompatible with our peculiar style of politics.

No mere learning, of course, should brevet any man for so high an office; yet I for one believe that, if not in themselves the mark and sign of political fitness, Mr. Wilson's degrees and the academic offices he has filled are the symbol of what may be a momentous change. Democracy has failed in no slight measure because it has refused to entrust power to men in high position. We now see the most notorious of democracies disregard the precedents of well nigh its entire career; discover for itself and repudiate counterfeit judicial conservatism; turn away from the arguments *ad captandum* of a man whom eight years ago they chose as President, and whose courage they still admire, to this quiet, earnest man whom the public has known only from his recent record as Governor of New Jersey, and whose "efficiency" can hardly be ascribed to chance, or, indeed, to anything but the unique life he has led as a student, as a critic of affairs, and as an inspirer of young men.

E. W. Friend.

Princeton, November 5.

FELLOWSHIPS.

To the Editor of The Nation:

Sir: Mr. William K. Prentice, of Princeton, asserts in the *Nation* of last week that universities are frankly competing with one another in the prices bid for graduate students, and that the students, tempted by the munificent baits of university fellowships, are lured into academic life, regardless of their opportunities for usefulness on the farm or in some other business. The conditions he portrays would indeed be alarming were they not clearly hypothetical; but even if there were a university faculty so weak in scholarship and strong in philanthropy as Mr. Prentice imagines, could it by such means attract graduate students? University fellowships commonly amount to about six hundred dollars, and often place the incumbent under obligations to engage in no other remunerative employment during the year. The price of graduate students, therefore, is comparatively reasonable, and the incompetent professor hires them to listen to him rather than stenographers or plumbers (who would serve just as well to give him an appearance of usefulness) simply because they are less expensive. What young man would not waste a year of his time listening to such a professor, what scholar would not desert his libraries and the stimulus of kindred minds for half a plumber's wage?

Columbia University is conspicuous for its success in building up a large graduate school in the last dozen years, and its business methods have been called commercial. There are twenty-four fellowships open to about twelve hundred men graduates. Each student, therefore, has something like one chance in fifty of receiving an award. Furthermore, a glance at the present list of fellows shows that all but two had spent at least a year in graduate study, and hence had fairly embarked upon their professions, before being appointed fellows. Here, then, is one large and important university where the system of fellowships cannot justly be included in any such sweeping indictment.

But in asserting that young men of real ability and force of character cannot be induced to enter an academic life unless they are lured from the farm or from business occupations by the glitter of university fellowships, Mr. Prentice makes a more serious charge against the teaching profession. Are we to believe that only a fool would be a scholar? If it is true that students undertake to become college professors only in hopes of immediate or ultimate reward, then indeed they are shortsighted. But the young man who deliberately decides to become a scholar because he is born to that calling and can be nothing else, may have talents in his way and still be willing to prepare himself for teaching. He may even allow himself to be subsidized and yet maintain an average character. Perhaps he may soothe his wounded pride by reflecting that had he elected the career of farmer or manufacturer, he would still be exposed under our tariff to the danger of a liberal subsidy. But the thing he will not do is to choose his university on any other considerations than the scholarly reputation of its faculty and its opportunities in the way of libraries and laboratories.

George F. Whicher,
Fellow in English.

Columbia University, November 11.

COLERIDGE AND SOUTHEY AGAIN.

To the Editor of The Nation:

Sir: Mr. Sherman has done me a favor by remedying the incompleteness of my letter in the *Nation* for October 10, and a slight injustice by implying that I did not know the facts which he recites in his letter a fortnight later. I ought, it is true, to have mentioned the former schoolmate whom Coleridge met in London in September, 1794, who was agent for an American land company and praised the region of the Susquehanna. The anecdote would have suited my purpose, which was to show that the poets probably had in mind, with possibly many other examples of colonization, the particular plan which was at that very time being carried out by French *émigrés* in Pennsylvania.

That the Susquehanna project had by no means received its death blow six months before June, 1795, as Mr. Sherman says it had, is evident from a letter of Southey's to his brother Thomas, March 21 of that year, in which he says, "If Coleridge and I can get £150 a year between us, we purpose marrying and retiring into the country, as our literary business can be carried on there, and practicing agriculture till we can raise money for America—still the grand object in view." It was not till November 14 that Southey married Edith Fricker and set off to Lisbon, and it was only in November that he announced to Coleridge his abandonment of Pantisocracy. The change in Southey's plans, implying, as it seemed, a defection from principles which had until lately been rather loudly proclaimed, excited Coleridge's extreme grief and anger.

He had perceived a faltering in October. It was then that the blow fell, and it caused one of the deepest disappointments of his life.

I might add to Mr. Sherman's list of citations a reference to Coleridge's amusing letter to Southey in the autumn of 1794, on the propriety of taking servants and children to their Paradise Regained. At that time the scheme was just assuming something like definite shape. It had not yet attained all its magnificent proportions. Meanwhile, the French colony at Asylum was already established. Coleridge is, or affects to be, much concerned about the little Frickers, asking, "How can we insure their silence concerning God, etc? Is it possible *they* should enter into our *motives* for this silence?" The letter was printed in the *Illustrated London News,* April 15, 1893, and in Coleridge's *Letters,* I. 102.

Mr. G. S. McClintock, of Wilkes-Barre, a descendant of one of the Asylum colonists, has shown me a letter written by the Duke de la Rochefoucauld-Liancourt during his visit to the settlement, in which he gives a more favorable account of its prospects than he printed in his book. In his letter the name of the village appears to be Asylum-le-roy. This would tend to confirm the tradition, mentioned in my former letter, that the colonists entertained some hope of harboring Louis XVII or Louis XVIII.

GEORGE MCLEAN HARPER.

Princeton University, October 29.

CHURCH GIFTS.

TO THE EDITOR OF THE NATION:

SIR: At this time of the year when hundreds of teachers and students are having their attention directed anew to the Canterbury Pilgrimage, some of the readers of the *Nation* may be interested in noting that a fourteenth century custom referred to by Chaucer is to be found to-day in the negro churches of Kentucky.

In describing the Wife of Bath, Chaucer says that:

> In al the parisshe wyf ne was ther noon
> That to the offring bifore hir sholde goon;
> And if ther dide, certeyn, so wrooth was she,
> That she was out of alle charitee.

The editors explain that at that time no collection box or plate was passed through the audience as now, but that the people carried their offerings of bread, cake, or wine to the altar. The Wife of Bath desired to lead the procession, as that was the place of greatest prominence. In our negro churches gifts of money have taken the place of the offerings in kind, but they are still carried to the front of the church by the givers themselves, just as in Chaucer's day. And, though the question of precedence causes no rivalry now, there are as great, if not greater, opportunities for display. The place for the offering is usually a table just in front of the pulpit, and the people walk down the aisle and place their gifts on the table, with as great a consciousness of their importance as ever the Wife of Bath could have had.

One of my cousins had a servant who asked for twenty-five cents every time she went to church. As the girl was earning only a dollar or so a week, her contributions seemed disproportionately large, and my cousin attempted to reason with her. "La, Miss Susie," said the girl, "those that don't give as much as a quarter don't get their names read out, and I should die for shame if I was at church and didn't get my name read out." What would not the Wife of Bath have given to have had her name "read out"?

Literature

A TYPICAL AMERICAN.

Mark Twain. By Albert Bigelow Paine. New York: Harper & Bros. 3 vols. $7 net.

The reviewer sat down before these three thick volumes with a determination to do his duty, yet with a distinct apprehension that he should be overtaken by fatigue before he emerged from the two-hundred-and-ninety-sixth chapter and plunged into the twenty-four appendices. He was thinking of Mark Twain as an author of books; and his mind was still irritated by memories of the extravagant admirers who saluted the veteran of a thousand ovations as a superlative artist, a profound moralist, and a grave philosopher. He knew Mark Twain's works tolerably well, greatly admired three or four of them—the others much less—and wished them all shorter. He remembered that Twain had been writing autobiography in one form or another for fifty years, and that the later instalments in the *North American Review* had affected him as painful and terribly prolix. He reflected on the fact that Mr. Paine was a man of Western education and sympathies, that Twain was his literary idol, and that this biography was the fruit of six years' labor, during four of which the subject had offered himself for study and had dictated volumes of recollections. He suspected that these 1,719 pages would constitute a last disproportionate monument under which the old humorist would be buried. Then he opened the book and began to read.

When he left off reading two or three days later, he felt as if he had just returned from an exploration of the world, and were rounding out in tranquillity a restless life that had extended over three-quarters of a century. He looked back over a stream of experience of historical breadth and national significance, in which the writing of books had been only an incident. He had been carried back to the days of Andrew Jackson, and, with the hope and hunger of the westward migration, had drifted as the slave-holding John Clemens out of Kentucky into Tennessee and on to Missouri, and there had died, dreaming in poverty of his 75,000 acres of Tennessee land unsalable at 25 cents an acre. He had been born again in the son, half-educated, mischievous, and eager, and had set type for a struggling little journal in Hannibal, Missouri, ten years before the Civil War, and had made his first sensation by printing in his brother's paper a poem inscribed "to Mary in H——l [Hannibal]." He had taken one end of a Testament, his mother the other, and had promised not to "throw a card or drink a drop of liquor," and had set out to see the world, still as printer, in St. Louis, New York, Philadelphia, Keokuk, and Cincinnati. But then he heard the call of the river, and for four years was a pilot, and studied the intricate mysteries of the Mississippi, and laughed and jested with rivermen from St. Louis to New Orleans, till a shell from the Union batteries exploded in front of his pilot-house and ended that chapter. Then for a few days as second lieutenant of an extemporized militia company, he rode a small yellow mule to the aid of the Confederacy. Next, the golden flare in the far West caught his eye, and, couched among the mail-bags behind sixteen galloping horses, he swapped yarns across seventeen hundred miles of plains till he reached Carson City, and became a miner, and suffered the quotidian fever of the prospector daily anticipating the yellow nuggets in the bottom of the pan, and filled his trunk with wild-cat stock, and knew the fierce life of frontier saloons and gambling hells. From the unfruitful pick and shovel he passed on into the boisterous, bowie-knife journalism of the *Enterprise*, and thence to vitriolic humor on the *Morning Call* in San Francisco, and he sent his name to the Atlantic Coast with the "Jumping Frog of Calaveras County," and lined his pockets with gold by a great news "scoop" in the Sandwich Islands.

It was 1866, he was thirty-one years old, and his career had just begun. He now entered upon a forty-year engagement as a public lecturer, and competed successfully with Fanny Kemble and P T. Barnum, and made himself known personally to hundreds of thousands, and convulsed them with laughter. At the same time he became a great traveller, perlustrated the cities of his native land, plundered the vineyards of Greece, presented an address to the Czar, visited Jerusalem with the Innocents, sojourned in England and gossiped with the Prince of Wales, in Germany and dined with the Emperor, in India and was entertained by a native prince in Bombay, interceded with President Krueger for the prisoners of the Jameson Raid, captured the cities of Australia and New Zealand, and exacted tribute from the whole world. Three or four years after the Civil War he began to throw off books as a comet throws off meteors. Then he took up the burdens of a publisher, bargained with Gen. Grant for his memoirs, and sold a quarter of a million copies where the other bidder had planned for a sale of five or ten thousand. His imagination took fire at a dream of magnificent wealth, and he became a great speculator, and in one year invested $100,000 in projects, and sunk a fortune in an unperfected type-setting machine, and went into bankruptcy. Then, at the age of sixty he girded himself anew and made another fortune in three years and repaid his creditors to the last dollar, and in a few years more had accumulated a third fortune for himself, and drew annual royalties equal to the salary of the President of the United States, and built himself splendid mansions, and rested from his labors on an Italian mahogany bed, clad in a dressing-gown of Persian silk. Then the University of Oxford summoned the printer, pilot, miner, reporter, traveller, lecturer, author, publisher, capitalist across the sea, and robed him in scarlet, and made him a Doctor of Letters, and he retired into unofficial public life till the call came to set his course towards the sinking sun.

This is not the biography of an author; it is the prose Odyssey of the American people; and it will continue to be read when half of Mark Twain's writings are forgotten. It will continue to be read because it conveys in relatively brief compass the total effect which he spent a lifetime in producing—with American recklessness and prodigality, with floods of garrulous improvisation. Mr. Paine loiters a little, it is true, through the mild Indian summer of Mark Twain's final prosperity, but that was the period of his personal relations with his hero, and we must forgive him if, like an artist infatuated with his subject, he paints us several portraits differing only slightly in attitude and shading. His first two volumes are really marvels of compression; he disposes, for example, of the trip to Palestine in twenty-odd pages, and of the voyage around the world in less; yet we venture to predict that he tells about as much of those famous expeditions as after the lapse of a hundred years a more sophisticated posterity will stay to hear. From first to last he rejects tempting opportunities to digress into history and overflow into description; he supplies only so much setting as serves to bring the actor into higher relief. He is under an illusion, we believe, as to the value of Mark Twain's theology and philosophy and literature—notably in the case of the "Personal Recollections of Joan of Arc"; but his sense of what we may call biographical value is admirable. His book is full of animated and characteristic phrase, gesture, and attitude. He has extenuated nothing of his hero's weakness or his strength, and has set forth with all possible veracity the processes through which the man of the frontier became, without losing his essence and his tang, quite literally the man of the world.

No one recognized more frankly than Mark Twain himself that in a sense he was a raider from the Border. He never pretended to be the thing that he was not, and, on the other hand, he was never ashamed of the thing that he was. He planted himself, according to the Emersonian injunction, squarely upon his instincts, accepted the "society of his contemporaries, the connection of events," and, with a happy faculty for turning everything to account, capitalized his very limitations. It was one of the secrets of his immense personal effect that he never felt nor looked like a scholar or a thought-worn literary person, but rather like a man of affairs—erect, handsome, healthy, debonair—in his earlier years like a prosperous ranchman, later like a financier, a retired field-marshal, an ambassador, or, as his friends would have it, like a king. It was an iron constitution, tempered in the Mississippi and tested in the mining camps of the West, that enabled him to endure the stupendous fatigues of his great lecturing tours, to throw off 100,000 words of a novel in six weeks, to toil—without exercise and smoking heavily—all day and half the night, and, when he was past seventy, to talk copyright for hours with a hundred and fifty different Congressmen and radiate superfluous energy at a dinner in the evening, or to play billiards with his biographer till four o'clock in the morning.

If a kind of unconscious frontier impudence persuaded him of his competency as a Biblical critic, and carried him into the realm of abstract ethics, and led him late in life to add the weight of his authority to the followers of Delia Bacon, it was a kindred and valuable mental innocence that made the first fifty years of his life a perpetual voyage of discovery, sharpened his observation and his appetite for experience, and preserved the vernacular vigor of his speech. Had he undergone in his formative period the discipline of an older and firmly stratified society, he would have been saved from some lapses in taste, but he would have lacked that splendid self-confidence which is born of living among an homogeneous folk, and which in the long run explained his unrivalled power, on the platform and in print, of getting in touch with his public. As pilot, miner, and Nevada journalist he found his most profitable associates among men rather than among women, and there he formed the habit of addressing himself to a robust masculine audience—a habit which gives him an almost unique distinction in American literature, and marks him clearly as belonging to the heroic age. It is a significant fact that he was introduced to his future wife by her brother, who had become a great friend of his on the voyage of the Innocents. It is an equally significant fact that the friendship terminated and the brother departed on a journey when he learned that the humorist intended to marry his sister. If Mark Twain ever became a lion among the ladies, it was because they liked lions, not because he accepted their conventions. He detested Jane Austen, her works, and her world; and unabashed he accounted for his antipathy: "When I take up one of Jane Austen's books, such as 'Pride and Prejudice,' I feel like a barkeeper entering the kingdom of heaven." What he thought of the "kingdom of heaven" he has set forth in another place. His religious ideas he had from Tom Paine and Robert Ingersoll—another mark of the spiritual frontier; his finer moral feelings, from his wife and from his mother.

In his rather heavy-handed attack upon Bourget, Mark Twain declared that there is *nothing* "characteristically American" except drinking ice-water. But on the occasion of a railway accident he wrote to a friend, "It is characteristically American—always trying to get along short-handed and save wages." If the eulogists of Mark Twain's humor could hold themselves to a strict inquisition, they would find themselves praising sometimes his legitimate triumphs and sometimes—with an admiration for success that is characteristically American—his colossal crimes. His humor has many phases, but in the main it depends upon the absolutely reckless release of that speculative temperament and imagination which ruined the pioneers in Tennessee and squandered a fortune in unprofitable inventions. Mark Twain's typical "good story" is something like a Western "good proposition"; it is a magnificent lie with an insignificant kernel of truth. If the truth evaporates entirely, the result may be painful burlesque—such as we find in the low spots of "Huckleberry Finn" and the "Connecticut Yankee." This Western humor depends also upon a perfectly fearless revelation of the reaction of the pioneer upon an unfamiliar environment. This is the prevailing humor of the "Innocents," and of some of Mark Twain's confidential communications: "Whenever I enjoy anything in art, it means that it is mighty poor. The private knowledge of this fact has saved me from going to pieces with enthusiasm in front of many and many a chromo." Nothing could be more delightful of its kind, unless it is the confession of a mistake that he made at Oxford after he had received his degree. At a dinner given at one of the colleges he wore evening dress, but found the assembled company clad in their scarlet academic costume: "When I arrived the place was just a conflagration—a kind of human prairie-fire. I looked as out of place as a Presbyterian ly hell." But this humor sometimes depends also upon a disregard of the proprieties, and on occasion it consists in nothing but this disregard of the proprieties. An example that pretty well illustrates this type may be found in the one-hundred-and-twenty-third chapter of the biography. The humor on this occasion consisted in reminding Gen. Grant and his veterans of the Army of the Tennessee and the six hundred guests at a great and solemn banquet that once upon a time their grim commander-in-chief was wholly occupied in trying to get his big toe into his mouth—"and if the child is but the father of the man, there are mighty few who will doubt that he succeeded." The house, we are informed, came down with a crash, and Sherman exclaimed, "I don't know how you do it!" But that was what, in the present state of civilization, should be called a crime. It is a crime against taste, colossal and barbaric. It is humor befitting the bronzed revellers in Carson City or the Welsh giants of the "Mabinogion."

Mr. Paine, like some other recent critics, dwells with a kind of retaliatory gusto upon certain Brahminical reservations in the welcome accorded to Mark Twain by members of the older New England inner circle; he is sure that the world is now having its laugh at the Brahmins. He reminds us also that, while Twain was still on a kind of nervous probation in America, he had been received with unrestrained delight in England. But the right explanation of the hesitation on this side of the water does not seem to have occurred to him. The fact is that Twain was hailed with jubilation by Englishmen because he answered perfectly to their preconceptions of the American character. They could enjoy him, furthermore, with the same detached curiosity and glee that their ancestors at the Court of James I felt in the presence of Pocahontas—another typical American who, as we read, received marked attention from the Queen, and accompanied her to the Twelfth Night revels. We imagine that some gentlemen in Virginia were a little worried lest it should be thought in England that all their wives were Indians—without deeming it at all necessary to apologize for Pocahontas; she was a lovely barbarian, to be sure, but she was truly representative only of the dusky background of their civilization. The Brahmins with some justice looked upon Mark Twain, and will continue to look upon him, as a robust frontiersman, produced in the remote Jacksonian era, carrying into the courts of kings the broad laughter of the plains, and only representing adequately an America that is already historical and almost fabulous. We would no more condescend to this Herculean humorist than to any other epic hero; we accept him heartily as we accept Robin Hood and Charlemagne, the wily Odysseus and Dick Whittington, thrice Lord Mayor of London. But, surely, in this day, when we are all exalting the primitive, it should be thought no diminution of his greatness to say that he would be out of place in the "Divine Comedy" or "Paradise Lost"—to reaffirm that he is the hero of what our ballad enthusiasts call a "folk" epic, and that he wins upon us by the savory earthiness, the naïve impudence, the lucky undisciplined strength of the folk hero.

CURRENT FICTION.

[THE CRIMINAL AS HERO.]

Out of the Wreck I Rise. By Beatrice Harraden. New York: Frederick A. Stokes Co.

Mary Pechell. By Mrs. Belloc Lowndes. New York: Charles Scribner's Sons.

The Master of the Oaks. By Caroline Abbott Stanley. New York: Fleming H. Revell Co.

From the light-heartedness of the picaresque novel to the irony of "Jonathan Wild" or "Barry Lyndon" was a long step; but we have since made further progress in our treatment of the criminal as hero. As the male novelist and playwright has made a heroine of the woman with a past, so the female writer has begun to give the place of honor to the man with a past. We happen to have before us a group of three novels by women, in each of which a thief plays the part of hero.

By hero we do not merely mean a central figure about which the action revolves. We mean a person who is intended to appeal to our sympathies and even to our admiration. Not a few among the protagonists of modern fiction—Dr. Mitchell's François, for example, or the more recent and more famous Raffles—have shared the moral topsy-turviness of a Wild or a Lyndon. Whether as the fruit of heredity or environment (matter for argument between the Lombrosos and their adversaries), there is certainly a class of criminals to which the worse seems the better reason: witness the testimony in the Rosenthal case of current fame. Miss Harraden's gentleman-criminal, divested of the glamour in which feminine fancy arrays him, belongs to this class. Nevertheless, she appears to expect that the unprejudiced observer will find him, if not an admirable, at least a charming and compelling person. Looked upon with detachment, his only sure asset seems to be that fascination which the self-possessed and physically feeble rascal has for the eternal woman.

Adrian Steele is a successful playbroker who deliberately, and without any sort of necessity, cheats his clients of their royalties. He has made some thirty thousand pounds by giving false returns of the number of performances, when one of his lesser victims gets on the trail. Now, Adrian believes he has only taken full payment for services which the amount of his commission mocks at. He has made these men what they are, and deserves a fair slice of their profits. But with wife and child, and position in the world, the prospect of exposure brings him suffering. So he turns for comfort to two women whom he has wronged and deserted years before. He finds them both still adoring and ready to vie with each other in bringing about the concealment of his crime from the world. They do not succeed, and there is only one means left for Adrian's rising out of the wreck of his life. Self-sacrifice? Regeneration through suffering? Nothing so commonplace, you may be sure. Leaving the three women who love him and the child he professes to adore, the contemptible rascal puts himself and his fatal charm in the way of an Alpine avalanche and vanishes in a mist of feminine tears.

The thief of Mrs. Belloc Lowndes is a more ordinary person. He has one claim on the reader's sympathy to begin with, which has never been challenged. If Richard Wigney's great-grandfather, the last Earl of Wolferstan, had been able to marry the woman he loved, Richard Caryll would now be Earl of Wolferstan. Not to be in line for that title has embittered his life from the cradle, and he has taken advantage of the position of trust in which he has been placed as a very young man, to embezzle a large sum of money—by way of protest against the laws of this unjust world. The crime has been hushed up for business reasons, and the young man has gone to Australia. Having made his fortune, he returns to England, buys up the ancestral estate, and wins the heart of Mary Pechell. A rival learns his secret, and it is for Mary to choose to share his second exile with him. Richard at least lacks the detestable complacency of Adrian, and we are rather glad to have him escape the legal penalty of his fault, though it does not greatly matter, one way or another.

The master of "The Oaks" is a more appealing figure from the masculine point of view. When a boy, he takes a small sum of money from a bank in which he has an ill-paid position, knowing that a check is on the way which will more than cover the amount. Mails are delayed for several days by a washout, and the technical theft is discovered. The authorities refuse to consider the special conditions, and proceed to make an example of the poor wretch. He breaks jail, acquires money, begins life anew, makes a respectable place for himself, and is about to marry the girl of his heart, when his crime comes to light. Given America for England, it is the case of Richard Wigney over again, up to this point. But a consideration of honor causes the master of "The Oaks" to give himself up to the law, and so reveal his past to his betrothed, when he has only to keep silence to be safe forever. He pays the physical and social penalty which Wigney escapes, and his lady's loyalty is put to a correspondingly severer test. Of course, she passes it.

Caviare. By Grant Richards. Boston: Houghton Mifflin Co.

This is not a highly moral tale. It is a sobering fact that such literary wares may now be looked for even from Boston. The chronicle of the two apprentices does not run as it did in Hogarth's day, and the hand that wrote the Rollo books would be powerless to sway the emotions of youth-to-date. We understand there is still a market for "Gates Ajar" and "The Wide, Wide World," but it must have sunk in the social scale; it is not composed of young maidens who smoke cigarettes, or young men who play with margins. They must have spicier fare—hence the title and content of the present story.

The hero is an English Honorable, who, after Oxford, has spent ten years idling about Europe. When it is said that the scenes of his present exploits are Paris, Monte Carlo, and Wall Street, an inkling will have been given as to the trend of the action. He meets the beautiful American girl (for, of course, there is one) at a questionable resort in Paris, to which her father, an American financier, has taken her; champions her through a difficult night; offers himself (to the father) as a suitor the next day. The father tells him he must go to work and earn enough to support her. If, after a year, etc. The Honorable assents, and sets out for America by way of Monte Carlo. At the Casino, by using a system touchingly based upon the name of his beloved, he promptly transforms two hundred pounds into five thousand. On shipboard, westward bound, he turns another penny by winning the pool on the run. Almost on landing he receives a market tip from a damsel (not the lady of his heart) whom he has succored aforetime—as it were, in his stride. In two days on Wall Street, his five thousand pounds become a million and a half. So they marry and live happy ever after.

RELIGION OF THE STARS.

Astrology and Religion among the Greeks and Romans. (Vol. IX of American Lectures on the History of Religions.) By Franz Cumont. New York: G. P. Putnam's Sons. $1.50 net.

Astrology, says Professor Cumont, an alliance between mathematics and superstition, is the most persistent hallucination that has ever haunted the human brain. No one is better fitted than he to describe the history of this pseudo-science. But what he here undertakes to discuss is not so much astrology proper, divination by the stars, as astrolatry, the worship of the heavenly bodies. The present volume gives in popular form material contained in his larger work, "Oriental Religions in Roman Paganism." It is an admirable picture of the rise of Babylonian star-worship, its fusion with Greek philosophy, and the resulting emergence of a great religion which seemed at one time ready to contest with Christianity and Mithraism the control of the Græco-Roman world. The cult of the stars originated in Babylonia, but its development into a universal religion was the work of the Greeks. Just as the empirical Chaldean astronomy was converted by them into a science of astronomy, so out of the divinization of the heavenly bodies they constructed a religious system of compact dogma and lofty aspirations that appealed to and satisfied some of the best minds of the early centuries of our era.

It is not always easy, as Cumont observes, to distinguish the two components in the new astral religion, and he himself sometimes uses the term "Chaldean" without defining it precisely. This term was employed by the ancients to designate not only the Babylonian people and their learned class, the priests, but also the outsiders, Greeks and others, who adopted and developed the worship of the stars. How it is to be understood in any particular case in Cumont's description must be gathered from the connection. Thus he seems (p. 28) to regard the conception of "a Necessity, superior to the gods," as Babylonian. But this is hardly probable. The idea is certainly Greek (it is distinctly stated by Plato), and it is not found in any purely Babylonian document; the "tablets of fate," mentioned in mythical poems, are merely symbols of the power that was exercised by any dominant deity; in the later literature the fortunes of men are determined by the supreme god (in Babylon by Marduk)—there is no "Necessity" above the gods. Cumont's whole sketch of the "Chaldean" theology of the Alexandrine period (p. 28 ff) must be read critically. In the conceptions of the eternity of the world and the deification of Time, and in the worship of the world as a whole, one must look for something beyond the Babylonian star-worship.

The triumphal progress of the new astral religion is eloquently described by Cumont. In the invariability of stellar motions Stoicism recognized something akin to its conception of fate, and the great Stoic, Posidonius of Rhodes, Cicero's teacher, was an apostle of astralism in the Græco-Roman world. As time went on, the cult of the heavenly bodies united itself with the better religious tendencies that had asserted themselves in the empire. Thoughtful minds turned gladly from the old anthropomorphic divine figures to gods dwelling in or identical with the mysterious bodies that went their way serenely, standing above earthly weaknesses. The spectacle of the starry heavens aroused religious emotion in certain minds, passionate desire to be one with the cosmos, and so to be freed from mundane limitations. The greatest of the luminaries took precedence in the heavenly host, Sol Invictus came to be regarded as leader and lord of all things in heaven and earth. Thus a monotheistic cult emerged—that is, the splendid figure of the Sun offered a satisfactory point of attachment for the monotheistic feeling of the time. To the stars also philosophers looked for the abode of souls after death; the old underground hades had disappeared, the future condition of the soul was to be determined by ethical qualities, inward purity could find an appropriate dwelling-place only with the heavenly gods or in the celestial ether.

This grandiose scheme of life maintained itself for several centuries, but with variation in details. It was sometimes pantheistic, a real worship of the cosmos; sometimes it recognized many heavenly divine powers, sometimes one supreme deity. Notwithstanding its alliance with astrologic absurdities, it helped to clear the religious atmosphere, and was one of the forces that prepared the way for the triumph of Christianity. Naturally, it appealed only to philosophic circles—the masses continued to worship the local gods or to find satisfaction in the mysteries (Mithraic and other) till these were absorbed in the Christian system. A survey of West-Asiatic and European history from the second century B. C. up to the present time would be necessary to make clear why it is that, while the astralistic cults proper have vanished, astrology has never entirely lost its hold on men's minds.

Rowlandson's Oxford. By A. Hamilton Gibbs. London: Kegan Paul, Trench, Trübner & Co. $4 net.

Oxford is a theme pretty well exhausted, both from the inside and from the out, from the tourist and from the undergraduate point of view; yet Mr. Gibbs has caught a fresh aspect of the old city. The familiar drawings of Rowlandson are the ostensible peg on which he hangs his comments, but he allows himself a wide latitude, and the reproductions of the drawings are more by way of attractive adornment to the volume than having any direct bearing on the subjects treated. Nor are the drawings here shown identical with those made familiar through the engravings. The engraver of Rowlandson's sketches had, it appears, his own ideas about the architectural beauties of Oxford, and gave a Georgian finish to most of the buildings represented, "so that some of the most beautiful and characteristic buildings in Oxford and Cambridge, so delicately portrayed by Rowlandson's pencil, are turned into rectangular monstrosities, the like of which was never seen in either university town." Mr. Gibbs, therefore, asserts that his illustrations from Rowlandson's water-colors "are here reproduced for the first time." This book would be valuable, if for no other reason than for the fact that the illustrations exhibit Rowlandson as something more than the rather coarse cartoonist we have generally supposed him. In the foreground are the comic scenes and figures with which we are familiar, but behind them are delicate tracings of spires and towers and quadrangles which reveal the artist a master in architectural draughtsmanship.

Rowlandson, however, is only the excuse for a comparison of the Oxford of to-day with Oxford of the eighteenth century. Mr. Gibbs is well qualified for the task he has set himself, which is to show that, though other things may change, the undergraduate is the same yesterday, to-day, and for ever. It being, as he tells us in his preface, but two years since he himself "went down" from St. John's College, he still has the undergraduate point of view; his memories are undimmed, his enthusiasms unspotted from the world. Consequently, if at times he is a little naïve, it is a refreshing naïveté, and when he compares the "Smarts" of yesterday with the "Bloods" of to-day, or writes of "Freshers'" clubs, or Oxford tradesmen, or college discipline, he speaks as one having authority still fresh enough to be well remembered.

Mr. Gibbs has studied his subject with thoroughness, and gives us a very complete picture of university life in the eighteenth century. His authorities are contemporary records, and he quotes freely from that implacable 'varsity satirist and scourger of abuses, "Terræ Filius." Certainly, there were not wanting occasions for satire in the Oxford of those days. The dons were a drunken, dissolute lot, and the undergraduates asked nothing better than to follow the example set them by their seniors. Degrees were bought and sold; university offices were sinecures filled by persons totally incapable of performing the duties nominally required of them by the statutes; well might Gibbon remember with disgust the absence of all encouragement to studiousness that he found there.

Things have changed at Oxford since then, and Mr. Gibbs pays tribute to the high ideals that inspire the dons of to-day; but the undergraduate, in essentials, is the same now as he was when Rowlandson depicted him—a genial, happy-go-lucky youth, with a tendency towards the extreme in dress, a taste for metaphysics and dalliance with the Muses, and a healthy addiction to bodily exercise.

Carteggio di Alessandro Manzoni. A Cura di Giovanni Sforza e Guiseppe Gallavresi. I: 1803-1821. Milan: Hoepli. Lire 6.50.

It has long been undisputed that Alessandro Manzoni was the chief man of letters in Italy during the nineteenth century. He attained to that eminence when still young, and he held it till his death in 1873. Amid the political revolutions and the changes in literary fashions of more than fifty years, he reigned benignly, beloved even by those who were in no sense his followers. Leopardi was a greater poet and a far more significant figure, but he was never popular and national as Manzoni was.

Now, nearly forty years after his death, a fairly complete edition of his correspondence is promised. The first volume, which lies before us, covers the period 1803-1821; that is, from his nineteenth year to the publication of his Ode on the death of Napoleon. Always shy, and reticent even to his intimates, he nevertheless put into his letters much that helps us to trace his religious and intellectual evolution, and much that reveals his lovable nature. He combined great personal sweetness with a keen intelligence and sound taste.

During this formative period we trace his metamorphosis from Voltairean deist to fervent Catholic—a conversion which was brought about through the influence of his wife, Henriette Blondel, a Swiss Protestant who early embraced Catholicism. Although he remained unshaken in his new faith, Manzoni did not surrender his liberty of criticism: so that we find passages in these letters which, under the present régime at the Vatican, might subject him to ecclesiastical censure. When, for instance, he tells one of his spiritual advisers that the French Clericals have themselves to blame for bringing religion into disrepute by their political intrigues and ambitions and by their appeal to the state to prohibit all non-Catholic forms of worship, he seems to anticipate Modernist protests by more than eighty years. (His letter is dated April 7, 1820.)

But Manzoni was never a controversialist, and there is little theology in his letters. They abound in references to his "Inni Sacri" and to his plays, with discussions of Romanticism, with which Scott's novels were imbuing him. His "Carmagnola" had what some might call the good fortune to incur the sneers of the *Quarterly Review*. Goethe, by defending the "Carmagnola," introduced Manzoni to the German public, a service which he reinforced a little later by translating the splendid Ode.

Some of the last letters in this volume hint at the "Promessi Sposi," which Manzoni had begun. There are a few references to contemporary events—the lynching of Prina, for instance—and many to the intellectual situation. The letters from correspondents, who number some fifty persons, fill out or explain Manzoni's own. There are portraits and facsimiles and brief notes. The editors expect to complete their work in three volumes.

Your United States: Impressions of a First Visit. By Arnold Bennett. New York: Harper & Bros. $2 net.

Mr. Bennett is unduly cautious. In taking leave of his book, he says: "As for these brief chapters, I hereby announce that I am not prepared ultimately to stand by any single view which they put forward. There is naught in them which is not liable to be recalled." Mr. Shaw was bolder. Never having visited this country, he consented to write for one of our magazines the true explanation of American cities, but only on condition that not a change should be made in his copy, and he further implied that his word on the subject was final. That was magnificent. But to issue a book of first impressions and at the same time to fear that it may become outworn is to admit that one is only an ordinary human being. And who ever desired a critic to do that?

Mr. Bennett, perhaps because he yielded to the spell of this land with a too serious abandon, soon reveals himself to the reader as being not very different from many of us whom he came to explore. He acknowledges the superior comforts of our hotels and dwellings, with a shameless disregard of the romance attaching to such places abroad. Dropping into the American rhythm with surprising ease, he cannot understand why we are charged with rushing. We don't waste time in going about our business, but our goings and comings are so well organized that as he stops to recall the helter-skelter of a European crowd, we appear by comparison quiet and orderly. In good American fashion he knows, too, that Boston would like to be thought more English than she really is. One could wish that Mr. Bennett were not so facile. He has met us more than half way. Throwing off the drag of foreign traditions has left him an astonishing modernist. So absorbed is he in watching the great national machine in motion, hammering out the present and future, that any survivals of our past fail to touch him. So our system of education has for him no roots, it is all branches; and he is moved by them in much the same way as the most modern pedagogue who is over-zealous to read efficiency in sheer numbers. For some reason, Mr. Bennett has never in his life stopped off at Oxford or Cambridge. Hence his estimate of our universities is not complicated by a comparison with those English seats of learning. He "liked the complete life-sized railroad locomotive in the engineering-shops" at Columbia, and, after two or three other glimpses, came away "with a deeper and more reassuring conviction that America was intensely interested in education, and that all that America had to do in order to arrive at real national, racial results was to keep on being intensely interested." We understand now why the English prefer to have Americans who visit them continue to twang through the nose; there's some subtle message in that twang. Figuratively speaking, Mr. Bennett, for the occasion of his visit, adopted our nasal, bringing us no world-old message and repeating much of what his friends and excellent guides about this land have told him.

But if Mr. Bennett is a momentary American, some of his impressions are those which Americans enjoy having and being reminded of. He has grasped the American business man more sympathetically perhaps than any previous visitor:

> The attitude of the American business man toward his business is preëminently the attitude of an artist. You may say that he loves money. So do we all—artists particularly. No stock-broker's private journal could be more full of dollars than Balzac's intimate correspondence is full of francs. But whereas the ordinary artist loves money chiefly because it represents luxury, the American business man loves it chiefly because it is the sole proof of success in his endeavor. He loves his business. It is not his toil, but his hobby, passion, vice, monomania—any vituperative epithet you like to bestow on it!

He feels, too, though as dumbly as the rest of us, the meaning of our downtown skyscrapers—a meaning compounded of smoke and outline and human endeavor, the whole become beautiful in spite of itself. He draws a pretty picture of what is, after all, the nation's supreme hope—its youth—by saying briefly, "a number of young men and maids came out of a high-school and unconsciously assumed possession of the street." Finally, Mr. Bennett speaks with true understanding of a certain stratum of our civilization as illustrated by apartment houses in the Bronx: "Efficiency in physical essentials was inculcated—and practiced—by the landlord-company, whose constant aim seemed to be to screw up higher and higher the self-respect of its tenants." That a corporation should find its profit "in the business of improving the standard of existence and appealing to the pride of the folk," was, to him, as it is to all Americans, a sign of genuine robustness in our civilization.

Courts, Criminals, and Camorra. By Arthur Train. New York: Charles Scribner's Sons. $1.75 net.

Entertainment, rather than instruction, is the purpose of this book. Its author does not hesitate to criticise our criminal procedure, but he rarely rises to a higher strain than that of banter, and never permits himself to be mistaken for a reformer. He enjoys a fling at The Pleasant Fiction of the Presumption of Innocence, but he holds out no hope that this fiction can be abolished. Nor does he invite the reader to any serious discussion of procedural problems which now vex our bench and bar.

When he passes from "Courts" to "Criminals" his resolution to amuse is unmistakable. The opening chapter of this section, entitled Why do Men Kill? was written, not because the author had pondered the theme until he was burdened with matured ideas. Quite the contrary. It was prepared, he assures us, because a genial editor had telephoned him to send up a story for January on the above lurid title. In other words, this chapter, as well as the remainder of the section which deals with Detectives, was produced to supply a definite demand for a prescribed sort of copy. Undoubtedly, it served well its immediate purpose, but whether it merits reproduction in book form is open to grave doubt.

No such uncertainty can be felt about the third section of the book. Here the reader can learn much about the Camorra in Italy. If he is entitled to be called the learned reader, he may know all that is here told, and much more. The ordinary reader, however, will glean a maximum of useful information with a minimum of effort. He cannot fail to enjoy Mr. Train's graphic pictures of the Camorrist trial at Viterbo. They are quite different from those which were presented to us in the daily press, less grotesque and less highly colored. Probably the experienced criminal prosecutor saw the same scenes with different eyes from those of the press men at Viterbo. Indeed, Mr. Train declares that these reporters gave the American editors just what they wanted—sensational copy. On the other hand, he has attempted to describe the trial as he saw it. He declares that "he has never in his legal experience seen a judge presiding with greater courtesy, patience, fairness, or ability, or keeping, as a general rule, under all the circumstances, so perfect a control over his court, as the president of the assize in which the prosecution of the Camorra was conducted; nor is he familiar with any legal procedure better fitted to ascertain the truth of the charges which were tried."

Notes

Prof. W. P. Ker has collected for the forthcoming Vol. III of "Essays and Studies by Members of the English Association" (Frowde) papers by Gilbert Murray, A. A. Jack, J. W. Mackail, and George Saintsbury.

Macmillans announce "Socialism from the Christian Standpoint," by Father Bernard Vaughan.

Doubleday, Page & Co. will bring out in January "Bunker Bean," a novel by Harry Leon Wilson; and, somewhat later, books by Maurice Leblanc, J. C. Snaith, and F. F. Moore.

"Costumes, Traditions, and Songs of Savoy" is the subject of a handsome volume by Miss Estella Canziani, which Dana Estes will shortly have ready.

Lemcke & Buechner announce a new and thoroughly revised edition of Passow's Greek-German Dictionary, under the editorship of W. Crönert. It will be issued in about fifty parts at 2 marks 80 pfennigs each, for subscribers until the summer of 1913, when the price will be raised nearly half a mark.

Among the November announcements of the Yale University Press are the following: "The Moriartys of Yale," by Norris Osborn; "A Journey to Ohio in 1810," edited by Prof. Max Farrand, being the first volume in the Yale Series of Historical Manuscripts; "Greek Refinements," by William Henry Goodyear; the sixth volume of "Yale Biographies and Annuals (1805-1815)," compiled by Prof. F. B. Dexter; "The Index Verborum Catullianus," by Prof. Monroe N. Wetmore; and "Personal Names from Cuneiform Inscriptions of the Cassite Period," by Prof. Albert T. Clay.

Henry Holt & Co. announce for this week: Stanley Washburn's "Trails, Trappers, and Tenderfeet in the New Empire of Western Canada," and "Some English Story-Tellers, a Book of the Younger Novelists," by Dr. Frederick Taber Cooper.

"From Steele and Addison to Pope and Swift" is the title chosen for Vol. IX of "The Cambridge History of English Literature," which Putnams will publish immediately. The table of contents embraces the following headings: "Defoe—the Newspaper and the Novel," by W. P. Trent; "Steele and Addison," by Harold Routh; "Pope," by Edward Bensly; "Swift," by George A. Aitken; "Arbuthnot and Lesser Prose Writers," by G. A. Aitken; "Lesser Verse Writers," by Thomas Seccombe and George Saintsbury; "Historical and Political Writers," by A. W. Ward; "Memoir Writers," by Thomas Seccombe; "Writers of Burlesque and Translators," by Charles Whibley; "Berkeley and Contemporary Philosophy," by W. R. Sorley; "William Law and the Mystics," by Caroline F. E. Spurgeon; "Scholars and Antiquaries," by James Duff Duff and H. G. Aldis; "Scottish Popular Poetry before Burns," by T. F. Henderson, and "Education," by J. W. Adamson.

The same house has in press: "Swords and

Ploughshares," a work on peace by Lucia A. Mead; "The Peace Movement of America," by Julius Moritzen; "Indian Pages and Pictures," by Michael M. Shoemaker; "Problem of the Sexes," by Jean Finot; "Bible Reading in the Early Church," by Dr. Adolf Harnack; "Protestantism and Progress," by Ernest Troeltsch, translated by W. Montgomery; "An Unorthodox Conception of Being," by William Ellsworth Hermance, and "Fine Books" (Connoisseur's Library), by A. W. Pollard.

An outline of Mohammedan history from 622 to 1522, in the form of annals, is the device which the Prince of Teano has adopted to anticipate his slowly proceeding work, "Annali del Islam." The period embraced by the five volumes of this *magnum opus* which have already been published is also included in the projected epitome. "Cronografia Islamica" is the title the shorter work will bear.

London journals express satisfaction over the Crown's appointment of Sir Arthur Quiller-Couch to be King Edward VII professor of English literature in the University of Cambridge, in succession to the late Dr. Verrall. As novelist, poet, and critic, Sir Arthur carries to his new position a mind uncommonly versatile.

Plans are taking shape for the second meeting of the University Commission on Southern Race Questions, to be held at the University of Georgia, Athens, Ga., December 19. The commission was organized last May at Nashville by Dr. James H. Dillard, of New Orleans, president and director of the Anna T. Jeanes Foundation. The membership is composed of one man from the faculty of each of eleven Southern State universities, as follows: James J. Doster, Alabama; C. H. Brough, Arkansas; James M. Farr, Florida; R. J. H. DeLoach, Georgia; W. O. Scroggs, Louisiana; W. D. Hedleston, Mississippi; Charles W. Bain, North Carolina; Josiah Morse, South Carolina; James D. Hoskins, Tennessee; W. S. Sutton, Texas, and William M. Hunley, Virginia. The chief object of the commission is to encourage the scientific and sane study of the negro question.

We have received simultaneously two translations of M. Bergson's "Introduction à la métaphysique," a brief work originally published in the *Revue de Métaphysique et de Morale* of January, 1903. One of these translations has been made by T. E. Hulme and published by Putnams, as "An Introduction to Metaphysics"; it follows a revision by the author and has profited by a certain number of alterations in the text introduced by M. Bergson to make his meaning clearer. The other translation, by Sidney Littman, is issued by John W. Luce & Co., as "The Introduction to a New Philosophy." So far as we have looked into these versions, each is expressed in clear English. Those who are familiar with M. Bergson's work need not be told that this little treatise is an excellent introduction to his larger metaphysical books.

Henry Frowde has produced an edition of the Waverley Novels in twenty-four volumes, printed on Oxford India paper, which is a model of publication for those who desire their Scott in small compass. The typography is remarkably clear, and this, after all, is the main thing. The author's introductions and notes are retained, a newly prepared glossary is added to each novel, and more than 900 of the old illustrations are reproduced. To one detail only can objection be taken. No publisher, so far as we know, has had the courage and good sense to print the end of "St. Ronan's Well" as Scott wrote it, but each has reproduced the revision which he made in compliance with the utterly absurd squeamishness of the original publisher, and which deprives of zest and meaning one of the most finely conceived tragedies in the language. There can be no complaint that the present edition of the novel follows the example of all its predecessors, but at least the cancelled paragraphs should be printed in a note, as they have before been printed, so as to give the unwary reader some key to the anti-climax of the story as it stands. But that is a detail. As an offset, the volume which contains this novel and "The Surgeon's Daughter" extends to above 600 pages, yet presents a page of unimpeachable clearness and is of a size to slip easily into the pocket.

The five addresses which Nicholas Murray Butler has made as chairman of five of the last six Lake Mohonk Conferences on International Arbitration have been bound together in a small volume, with the general title of the address delivered this year, "The International Mind" (Scribner). The sub-title defines the book as "an argument for the judicial settlement of international disputes," but as each of the addresses contains something in the way of a summary of the progress made towards such settlement during the preceding year, the collection embodies an informal history of the movement since 1905 as well as the main points in the reasoning on its behalf.

The genealogy and public services of a widely ramified family receive further elucidation in Joseph C. Jackson's "British and American Family of Wolcott," published by the author at No. 138 East Thirty-fourth Street, New York. Mr. Jackson, who is a direct descendant of Henry Wolcott, of Windsor, Conn., takes vigorous exception to the method and scope of the earlier "Wolcott Memorial"; chiefly, it should seem, because of the failure of that work to include all the direct descendants, male and female, of the first Gov. Oliver Wolcott, and especially the Jackson-Wolcotts and their kindred. In spite of a discursiveness which leads the author into wide fields of historical and patriotic moralizing, the genealogical data appear to have been painstakingly traced. Needless to say, one who possesses the "Memorial" will need to have the present pamphlet also.

A vigorous statement of the importance of sea power in the rise and fall of kingdoms and empires is made by P. A. Silburn in "The Evolution of Sea Power" (Longmans, Green). Admiral Mahan is his inspiration. Human history from Xerxes at Salamis to Togo at Tschusima is his field. "To arouse and keep alive public enthusiasm in naval policy" is his aim. As a member of Parliament of the union of South Africa, he naturally emphasizes the importance to the English Empire of the maintenance of a strong navy. His account is interesting but based upon secondary material. He has no maps or diagrams to illustrate the subject and very few references to his authorities. He objects strenuously to the Declaration of London as more prejudicial to England than to any other country. The volume will doubtless commend itself to many, especially to subjects of the British Empire living in the Colonies.

The *Nation* (June 6, 1907) has already criticised at considerable length Prof. Mary Whiton Calkins's "Persistent Problems of Philosophy," and is not surprised to see that this excellent and succinct history of philosophy has reached a third edition (Macmillan). "The present revision of this book," the author writes in the preface, "has been undertaken primarily in order to relate its conclusions to the more recent of contemporary philosophical writings, and, in particular, to refer to the arguments against idealism so loudly urged by the writers who call themselves 'neo-realists.' Advantage has also been taken of the opportunity to amend and to supplement many passages of the book."

The Official Literature of the Civil War forms a great library. The unofficial history, the records of participants North and South, on sea and land, generals and privates, blacks and whites, women and children, as well as men, constitutes a vast accumulation before which the world to-day grows weary. This fact must impair the welcome extended to such a book as E. R. Hutchins's "War of the Sixties" (Neale), a compendium of stories of varying interest derived from participants of both sides in the war experiences. The tales are often thrilling, and always illustrative, but no more so than thousands of previous records.

"With Dante in Florence" (Dutton, illustrated), by Mary R. Lacy, is a careful and informing book, registering all spots in Florence that recall the exiled poet and his works, and giving a sketch of contemporary history. The list seems quite complete and accurate, though the custom of holding public Dante readings in Or San Michele might have been mentioned. Residents of Florence and leisurely tourists will find pleasure and profit in accepting the author's guidance. A few venial slips may here be noted. No alleged death mask of Dante has any authority. Leonardo Orcagna is an unwarranted form for Nardo Cione. By an obvious blunder the decorations of the Spanish Chapel seem to be dated in the fifteenth century. It is fairly established that Andrea da Firenze is their author. It would be difficult to find altar pieces by Giotto either in the Uffizi or San Marco, or woodcut illustrations in the early editions of Landino's Commentary. Such slight errors do not seriously impair the value of a book written with intelligent enthusiasm.

"The Hoosac Valley, its Legends and History," by Grace Greylock Niles (Putnam), brings together a formidable amount of information. There are legends of a Jesuit mission early in the sixteenth century. During the seventeenth, the valley, which was the east and west thoroughfare of the invading Mohawks, was the scene of constant warfare between them and the milder Mohicans. Its real history begins with the middle of the eighteenth century and the Dutch and Walloon settlements near the Hudson. Hardly later is the military occupation by the colony of Massachusetts at the head waters where now is North Adams. Its military history includes the heroic defence of Fort Massachusetts against the French and Indians of Rigaud; Bennington, where Molly Stark was not left a widow, and the surrender of Burgoyne. Irving made his life studies of the Knickerbocker family in the lower valley, and Bryant as a Williams student made his first flights in descriptive verse. Such visitors as Hawthorne, Emerson, Thoreau, W. Hamilton Gibson, Helen Hunt Jackson, and Owen Wister have celebrated the charms of the valley. Under a Williamstown haystack during a thunderstorm, the brotherhood was established which promoted the earliest American activity in foreign missions. From colonial times the swift Hoosac and its tributaries have witnessed an extraordinary manufacturing development. To-day the valley reveals sensational contrasts between the country places in the upper valley and the abject poverty and ignorance of the poor whites, many of them richly tinged with Indian and negro blood, on the adjacent mountain slopes. In Mark Hopkins the region developed one of the great apostolic educators. Eccentricity, from Ethan Allen down, it has fostered even more generously. In fact, the chronicle is so rich and varied that it has oppressed the author. The compactness of the book makes it pretty hard reading. Still, all lovers of this beautiful region will justly welcome it. One of them resents the omission of such glories as the high passes of Berlin and Petersburgh. Apparently these have no historical associations of noto to justify their mention. May not, however, the "Volneyites" of Williams College, who drove the original missioners out into the fields, have fortified themselves with the hard cider which within recent memory was still dispensed where Flora's Glen reaches the inner pass of Petersburgh?

The two volumes of "Historic New York" (Putnam) have been bound together, the whole making a handsome book of more than 900 pages. In the new form, each volume retains its original paging and index, failure to note which is likely to involve the reader in difficulties. The tables of contents and lists of illustrations of both volumes are placed at the beginning of the book, but a still more useful device would have been the insertion, at the end, of an index embracing the entire series of monographs. As it is, however, the authoritative and well-presented information on various phases of the city's history during the first two centuries of its existence, contained in the volumes that were first published more than a dozen years ago, now appears in a shape that deserves to attract a fresh company of readers.

Dr. Reuben Gold Thwaites and Miss Louise Phelps Kellogg have edited, as Vol. III in the Draper series (Madison, Wis.) "Frontier Defence on the Upper Ohio, 1777-1778." Both editors are well known for their painstaking work in editing the sources of Western history. The particular series to which their present volume belongs is dedicated to the memory of Dr. Lyman C. Draper, whose labors as a collector made the Wisconsin Historical Society's archives the richest depository of Western material in the country. The cost of producing the series has been assured by the Wisconsin Society of the American Revolution. The editors have limited their choice of documents to be published almost exclusively to the Draper manuscripts at Madison, and find their justification, no doubt, in the desirability of making that rich storehouse known to scholars; but serious objections can be raised to this method of selection. Dr. Draper's conception of history was the march of armed men, the din of battle, and the counting of the dead; and the collection which is called by his name is, therefore, too exclusively filled with docnments pertaining to frontier warfare. The second objection is that many documents, more valuable than those published, could have been found in various archives. While at work on these Draper volumes, the editors might have made a collection of documents that would be approximately definitive for the history of the Revolutionary War on the Ohio. Their failure to do this will mean that the whole material must be worked over again by other editors who may not be so well fitted for the task; and we shall have more volumes in other series on the same subject, thus complicating the work of research. American historical scholarship is suffering to-day from this haphazard system of selection and editing.

The time covered by "Frontier Defence" is the period (1777-1778) when Gen. Edward Hand commanded the American soldiers at Fort Pitt and was expected to guard, with a handful of troops, the frontier from Kittanning to the Great Kanawha and to keep in check the Indians north of the Ohio River. Gen. Hand's earlier experience had not qualified him particularly to direct Indian campaigns, and, unfortunately for his reputation, his arrival at his post was contemporary with the beginning of British activities in the forts on the Great Lakes and the organized Indian attacks on the Virginia frontier. Although he was partly successful, no brilliant action of his can be recorded. The editorial work on the volume is excellent, and the long biographical notes on obscure men will prove most helpful to future historians.

The death is reported of George Knottesford Fortescue, since 1899 keeper of the printed books at the British Museum. He was sixty-five years of age. His special bent as an author was probably directed by certain early duties at the library, which included cataloguing a large collection on the French Revolution. In this field he has written several works, the best-known being "Napoleon and the Consulate."

Science

"Leading American Inventors," by George Iles, is in the list of Henry Holt & Co.

Science books among Putnam's announcements include: "The Story of Moderu Nursing," by Lavinia L. Dock, being Vol. III of "A History of Nursing"; "Problems of Life and Reproduction," by Prof. Marcus Hartog, and the following Cambridge manuals: "House-Flies and How They Spread Disease," by C. G. Hewitt; "The Psychology of Insanity," by Bernard Hart; "The Individual in the Animal Kingdom," by Julian S. Huxley; "The Work of Rain and Rivers," by T. G. Bonney, and "Brewing," by A. Chaston Chapman.

The Geological Society of America includes in its circular announcing a winter meeting, December 28-31, at New Haven, the following paragraph, which deserves adoption by other societies:

> A valuable feature of the regular and social sessious of our annual meetings has always been the attendance of students and other junior workers in geological science, as visitors. The Council desires to increase the number of such attendants, and with this object requests each fellow to send to the secretary, not later than November 25, the names and addresses of persons who, whether they can attend the meeting or not, are seriously interested in geology and deserving of recognition as visitors, although they have not yet reached such standing as to gain membership in the Society. The Council will then write to the persons thus nominated, inviting them to attend the New Haven meeting.

A comprehensive view of China is presented in the *National Geographic Magazine* for October. Its wonderful system of canals for transportation, drainage, irrigation, and fertilization is described by the late Prof. F. H. King. He shows how, mainly by this means, a population of 400,000,000, tilling a region not a third as large as the United States, has subsisted for some thirty, and, perhaps, forty, centuries. The article is exceedingly suggestive as to what could be done to increase the natural resources and to prevent the ruinous waste in this country. Frederick McCormick, correspondent of the Associated Press at Peking, gives in "China's Treasures" an account of the principal pagodas, bridges tombs, tablets, sculptures, and rock temples. A visit to Lhasa—the Mecca of the Buddhist faith—is described by Dr. S. H. Chuan, medical officer of the Chinese Mission to Tibet in 1906-07. There is also an excellent map of the Empire, and 145 illustrations, many of which are unique.

The teaching of geography occupies a prominent place in the *Scottish Geographical Magazine* for October. The use of statistics in connection with it is advocated forcibly and intelligently by B. C. Wallis. Not only do they enable the pupil to learn the intimate relation between man and his work, but they fill a gap in our educational curriculum, and "prepare the pupil for later life by teaching him how to discuss and appreciate the constant numerical appeals to his intelligence which face him then, both as a worker and a citizen." The old soulless method of teaching geography, according to Mr. T. S. Muir, in a paper read before the British Association, is slowly but surely dying out in Scotland. The new method is illustrated by this question in a recent written examination: "Describe the country that can be seen on a fine day from any good viewpoint near your school. Illustrate your answer by a sketch-map. Show the directions."

It was not until 1897 that a "Record of the Royal Society of Loudon" was undertaken, to give information regarding the foundation, progress, and aims of that most honorable and influential society. A new edition of this record was proposed every five years, but this rule was immediately broken when a second edition appeared in 1901, to mark the beginning of the new century. No other issue was undertaken until the present year, the 250th anniversary of the Society's foundation, which gives us a third edition (Henry Frowde). Each chapter deals with a particular feature of the Society. The three charters conceded by Charles II are published in Latin and in English; complete lists of officers, members, benefactors, and trustees have been compiled or revised, and excellent reproductions of portraits of distinguished members are included. These records of the Society are preceded by an interesting historical chapter written by the president, Sir Archibald Geikie. The influence of Francis Bacon apparently led to the founding of the Society although no steps were taken until some years after his death. The actual organization grew out of the gatherings of a number of men who met together, sometimes in Oxford and sometimes in London, to discuss the new experimental science of physics. The most prominent of these pioneers were Robert Boyle, John Wilkins, John Wallis, John Evelyn, Robert Hooke, Christopher Wren, and William Petty. And from this modest beginning has grown a society which has included in its home membership virtually all the important English scientists for 250 years, and whose foreign membership is one of the most coveted prizes for scientific achievement. In contrast to its present established position, the Society met, at first, with much opposition, because of the feeling that its members were attempting to form an oligarchy to distribute among themselves all the prizes and positions open to scientific workers. The defence of the young association was undertaken by Bishop Sprat in his "History of the Royal Society."

Prof. Edward L. Stevenson, under the joint auspices of the Hispanic Society of America and the American Geographical Society, has issued a reproduction of the World Map, probably of Genoese origin and dated 1457, which is preserved in the Italian National Library at Florence. It is accompanied by a translation, freely revised and annotated, of a careful description of the original map, which was published by the late Prof. Theobald Fisher in 1886. The map as issued is a facsimile, not of the original map, but of a recent "hand-colored parchment copy," apparently based on photographs, with those portions of the map restored where the original colors have almost disappeared. The copyist, as well as the printer, evidently worked with much care under intelligent direction, and the result, although far from reproducing satisfactorily the map in Florence, is an important document. This Genoese map has long been known to students of mediæval geography, who have usually misread the date, which is unmistakable in the reproduction, as 1417 or 1447, instead of 1457. More than any other map of its time, at least among those which have been reproduced, this is "modern" in its frank acceptance of the evidence of travellers and in its obvious endeavor to sift the reasonable from the improbable. It is such a map as might have satisfied a practical man of affairs, a travelled diplomat, or, more probably, a merchant with distant correspondents. It shows the Nile rising in the great mountain lakes of the far south, as Ptolemy knew it; Scotland is properly placed; and the rivers and trading centres of the country tributary to the Black Sea are well indicated. Eastern Asia has much less the appearance of the modern maps, but the coast-line and the frequent legends show that the draughtsman was familiar with the reports of Marco Polo, the missionary travellers, and especially Nicolo di Conti, the Damascus merchant whose return to Italy in 1444, after twenty-five years of wanderings, marks the real beginning of accurate European information concerning the southern Asiatic countries. Professor Stevenson has done a service of considerable importance, by making available a map which shows what the world looked like to Columbus and to his contemporaries. There was a great deal that the men of the fifteenth century did not know, but they knew a great deal more than is usually supposed.

Dr. Arthur Tracy Cabot, one of Boston's noted surgeons and a fellow of the Harvard Corporation, died at his home last week in his sixty-second year. Dr. Cabot received from Harvard the degrees of A.B., A.M., and M.D. At one time he was president of the Massachusetts Medical Society.

John Williams Mallet, professor emeritus of applied chemistry in the University of Virginia, died a week ago at Charlottesville. He was born in Dublin, Ireland, in 1832, and graduated from Trinity College, of that city, in 1853. He set out shortly for this country, and became, successively, assistant professor of analytical chemistry at Amherst, professor of chemistry at the University of Alabama, and head of the ordnance laboratories of the Confederacy. He retired from active teaching in 1908. Professor Mallet was a member of many scientific societies in this country and Europe, and the author of various papers in scientific journals.

Drama

"The Honeymoon" (Doran) of Arnold Bennett, described on the title page as a three-act comedy, belongs rather to the category of superior farce, but exhibits more, perhaps, of the true dramatic quality than is to be found in any of this writer's "Polite Farces" or his more ambitious "What the Public Wants." Whimsical and insubstantial as it is in fabric, its characters are alive, and it presents one exceedingly clever study of a capricious, exacting, genuine, and fascinating woman. Flora Lloyd, a few hours after her marriage to Cedric Haslam, a famous airman, has a serious tiff with her husband, because the latter, who has promised her a full month's honeymoon, wishes to abbreviate it in order that he may fly over Snowdon before a celebrated German rival. He holds that his honor is involved, while she contends that his pledge to her, if he really loved her, should outweigh every other consideration. At the height of the dispute they are informed tbat the man who married them had never been ordained, and that they must go through the ceremony again. This she refuses to do, breaking off the engagement, although Cedric bas unwillingly accepted her view of the case, on the ground that he is governed by expediency, not conviction, and in his heart of hearts still begrudges her the sacrifice he is making. Presently Cedric hears privately that the German flyer has broken his leg, and straightway he assures Flora that he has been thoroughly converted to her opinion and begs her to go to church with him at once. But Flora also has heard of the accident, sees through the pretence, and turns upon him in lively fashion, after convicting him of a series of undeniable falsehoods. When he is completely subdued, she promptly agrees to marry him, because, in condescending to lie, he has proved his devotion to be sincere. The imagined complications, if wholly unreasonable, are, at least, ingenious and amusing, and are handled with sufficient plausibility. But the piece is of small account apart from the character of Flora, which is a really admirable study of feminine moods, artifice, and witchery.

It is a bold man who at this time of day will reject all previous interpretations of Hamlet's character and claim for himself the only true solution of the mystery—yet this is what Emerson Venable has done in "The Hamlet Problem and Its Solution" (Cincinnati: Stewart & Kidd Co.). Here in the author's own words is what may be taken as a summary of his theory: "Shakespeare, instead of showing the effect of 'a great deed laid upon a soul unequal to the performance of it,' has shown a limited deed of questionable expediency when considered in its absolute and eternal bearings, laid upon a soul too great for its performance as an unrelated obligation of mere personal revenge." And immediately after these words he makes the comment: "This solution of the problem, which, baffling Hamlet, has baffled all the critics, is the only solution which is in harmony with every scene and every syllable of the play, and this solution alone affords an adequate and truly psychological explanation of the tragedy." But what is this solution, as stated above, but a translation into vague phraseology of the familiar "conscience theory"—Hamlet was restrained by conscience or a moral scruple—which some pages before the writer had rejected so positively and, to our mind, so justly? Later on we have again the wire-drawn distinction between Hamlet's "relative or personal duty" as opposed to his "absolute duty," and it is his perplexity in the conflict of these "duties" which, according to Mr. Venable, furnishes the key to his character. There is throughout the book a good deal more of this vague and abstruse phraseology, concealing the real want of novelty in the author's thought, but, on the whole, the style of the essay is superior to the content. We do not see, however, that it marks in any respect an advance over the famous interpretations of the past.

"Bella Donna," the play which J. B. Fagan made from Robert Hichens's novel of that name, and which had a great success in London, when Mrs. Patrick Campbell played the principal female character, was produced in the Empire Theatre on Monday night, with Alla Nazimova as the heroine. It is this last fact that confers a certain importance upon the representation. The piece itself is inferior melodrama, both the personages and the incidents appearing conventional and crude when deprived of the literary adornments of the book. It unfolds a tale of unbridled passion and heartless treachery. Mrs. Chepstow, a notorious woman, fascinates and marries an innocent young gentleman, whom she expects to inherit a title. Soon afterwards she discovers that he will do nothing of the kind, and she poisons him, at the instigation of a rich Egyptian for whom she has conceived a wild passion. Her husband is saved in melodramatic fashion by the intervention of an old friend, a physician, and at the last the false wife, rejected both by her husband and her Egyptian lover, has apparently no recourse but suicide. The whole atmosphere is morbid, feverish, and unwholesome. Madame Nazimova makes a striking display of her varied artistic resources in depicting a female embodiment wholly evil, actuated only by greed, expediency, or lawless passion. Technically regarded her achievement is remarkable, but it is almost entirely theatrical, seldom in the least degree human. Consequently it is antipathetic. It leaves the problem of her proper status as an actress still unsolved, but tends to confirm the theory that she excels chiefly in a somewhat narrow range of eccentric character, and has neither the imagination nor the capacity essential to the interpretation of the higher drama.

"Sylvia Greer" is the name of a new comedy by Anthony Wharton, which will be produced next Saturday in the Queen's Theatre, London, by Ethel Warwick. The heroine, daughter of a cynical old scapegrace, is in love with a poor physician, while her father wants her to marry a rich elderly profligate. C. M. Lowne and Guy Standing will be the principal male supporters of Miss Warwick.

Joseph Cave, the old English actor-manager, who first went on the stage as Tom Thumb eighty years ago and was intimately associated in middle life with Sadler's Wells, the "Vic," and the Marylebone Theatres, is still living at the age of eighty-nine, a poor brother of the Charterhouse. He sang in the Cider Cellars in the days of Dickens and Thackeray.

Many of the older generation of American playgoers will be sorry to hear of the death of Frederic Robinson, the old English actor, who was once leading man at Wallack's—in the halcyon days—and who in later years was long associated with Edwin Booth. The veteran has just passed away, in his eighty-first year, at Brighton, in England, where he had long been a paralytic invalid. He was never an inspired performer, but few actors knew their business so thoroughly, or could acquit themselves creditably in a wider range of parts. His efforts were, in the main, Shakespearean, and he was in much request for such parts as Ferdinand in "The Winter's Tale," the Antipholus of Ephesus in "The Comedy of Errors," Laertes, Arviragus in "Cymbeline," the King of Navarre in "Love's Labor's Lost," and Fluellen in "Henry V." He played Romeo to the Juliet of Adelaide Neilson, when she made her London début—at the Royalty—in 1865, and was warmly praised. Towards the close of that year Lester Wallack engaged him, and he made his first appearance in this city as Sir Bernard Harleigh in Palgrave Simpson's "Dreams of Delusion"—a part he had performed at Plymouth the year before. Frontignac in Charles Dance's "A Wonderful Woman" was his second attempt. From 1868 to 1870 he was leading man at Selwyn's Theatre, Boston, and was generally recognized as a high type of actor, scholar, and gentleman.

Music

Modern Dancing and Dancers. By J. E. Crawford Flitch. Philadelphia: J. B. Lippincott Co. $3.75 net.

Dancing, Ancient and Modern. By Ethel L. Urlin. New York: D. Appleton & Co. $1.50 net.

Mr. Flitch has no patience with those who look on dancing as puerile or immoral, or as constituting the inevitably dull portion of a pantomime or the superfluous item in a vaudeville programme. He admits that ballroom dancing is the mere amusement of amateurs, unworthy of serious consideration, but stage dancing is or may be "an inspiration and a science." He is convinced that the time will come when dancing will once more hold the high place assigned to it by the Greeks and others of the ancient nations; indeed, he thinks that the historian of the future, when treating of the artistic activity of the first decade of the twentieth century, will remark as one of its most notable accomplishments a renaissance of the art of the dance.

After recalling a few of the facts illustrating the high esteem in which the terpsichorean art was once held, the author passes in review the different phases of the ballet during the nineteenth century. Taglioni's influence in renovating and developing the ballet is dwelt on, and there is a vivid account of the subsequent fierce rivalry with the beautiful Elssler, who also aroused a delirium of enthusiasm in the United States:

> She was received by the President of the Union himself, Van Buren, surrounded by his ministers. During her visit to Washington, the wheels of legislation ceased for a time to revolve. It was decided that Congress should only meet on those days when Fanny was not dancing. Dollars rained upon her. Daily she received bizarre and costly presents—massive gold cigar-boxes and chemises embroidered with precious stones.

Such a craze could not last long. Though prominent critics and great men of letters like Théophile Gautier gave the same serious attention to ballets and dancers as to singers and actors, a reaction came. Jenny Lind, Patti, and other prima donnas succeeded in taking away the operatic focus from the "incidental divertissement." They were aided by the fact that the new dancers were not the equals of their great predecessors. Virtuosity prevailed, attention being centred on the execution of difficult steps. The public still applauded, but it was the kind of applause it bestowed on a dog walking on its hind legs. Wagner had tried, when "Tannhäuser" was produced in Paris, to introduce a new kind of dance, but the ballet-master of the Opéra, on hearing what he wished, replied: "I see what you want, but it would need a corps of first dancers." Wagner, the author suggests, had he lived, would have found the "Prince Igor" of the Russian dancers a realization of the "bold and savagely sublime dance" he had in mind; but the time was not yet ripe for such a close alliance of the dance with interpretative music.

Thoroughly discredited for a time in the eyes of persons of taste, the stage dance seemed doomed to extinction, when suddenly something entirely new appeared which gave it a fresh lease of life. This was the skirt dance of Kate Vaughan, the fascination of which on minds artistic is illustrated by the fact that Ruskin and Burne-Jones "fell into each other's arms in rapture upon accidentally discovering that they both adored her." This was followed by the still more beautiful serpentine dance of the American Loie Fuller. To her Mr. Flitch devotes the most interesting chapter in his book. Strictly speaking, her art was not dancing; it was much more than that, and she herself was much more than a dancer. Her ingenuity in devising new color schemes and surprises amounted to genius. She was aided by the electric lighting which just then came into use, and her ingenious application of it in the diverse Rainbow, Flower, and Mirror dances had its influence on the stage-lighting in theatres and opera houses in general.

One regrets, after the author's sane remarks up to this point, to find him gushing like a school girl over the artificial and ludicrous antics of Isadora Duncan in her efforts to revive classical dancing by assuming the attitudes of figures on Greek vases while "interpreting" modern symphonies and piano pieces. She had numerous imitators, but, fortunately, the fad has almost run its abnormal course. Infinitely higher is the latest stage of the art of dancing as represented by the Russians. An interesting account is given in this book of the severe training which has yielded such remarkable results, and the repertory of these dancers is also described. Yet even this, the highest form of dancing the world has seen, is on the wane. In our own country it was a year's sensation. The following season it failed to interest. One feels sorry not to be able to share Mr. Flitch's sanguine hopes for the future; but the ballet has doubtless outlived its usefulness. Those who are interested in it will find this book, as this glimpse at its contents shows, interesting and suggestive. The final chapters are concerned with the English ballet, the revival of the Morris dances, and Oriental and Spanish dancing. A number of illustrations, some of them in color, adorn the book.

While Mr. Flitch loftily waves aside ballroom dancing as the pastime of amateurs, Ethel L. Urlin devotes the greater part of her volume to the dances of the people themselves, apart from the stage. She describes the dances of Indians and other barbarians, as well as those of ancient civilized nations, and mediæval sacred dances. The gypsies are not overlooked, nor are the Chinese, the Japanese, and the Hindus; military dances are dwelt on, and the final chapters are on the ballet and the revival of antique dancing in modern times. The book, which is profusely illustrated, will prove useful, particularly in schools where it is thought proper to make national dances a part of the curriculum.

A new Schubert biography by Walter Dahms has been published in Germany. It is based largely on documents not used heretofore and contains 230 illustrations.

The late Lina Ramann, who wrote a life of Liszt in several volumes, with the approval and aid of the great composer himself, kept a diary in which she jotted down her personal experiences with him and Hans von Bülow and other eminent musicians. The material for her Memoirs is to be printed under the title of "Lisztiana." The book will contain a number of letters from Liszt not heretofore printed.

The *Allgemeine Musik-Zeitung* of October 25 is a "Richard Strauss Number," issued by way of celebrating the performance of his latest works in Stuttgart. There are articles on him not only as a composer and a conductor, but as a politician.

Leopold Godowsky, the Polish pianist, who has not played in New York in the past twelve years, is to be the soloist with the New York Philharmonic Society Thursday evening, November 14, and Friday afternoon, November 15. These will be his first appearances; his first New York recital has been scheduled for Wednesday afternoon, November 27, at Carnegie Hall. During the present season in America, Godowsky will play six concertos—the B flat and D minor of Brahms, the fourth and fifth of Beethoven, and the two of Chopin.

Clara Butt, one of the greatest of living contraltos, will tour America from January to April, en route to Australia. Her husband, Kennerley Rumford, baritone, will appear with her in joint recital.

Ysaye makes his first New York bow at Carnegie Hall, Tuesday afternoon, November 19. The next Tuesday, November 26, he and Mary Garden give a joint recital in the same hall. Ysaye's first New York concert, with orchestra, follows Tuesday, December 10, with the Philharmonic Society at Carnegie Hall; that afternoon Ysaye is to play three concertos, the Bach, the Beethoven, and the seldom-heard Bruch in D minor. Ysaye and Godowsky give a joint recital in Carnegie Hall in the holiday week.

Liszt, who used to say, "I can wait," when everybody was eager to hear him play, but when no one wanted his compositions, would be delighted if he could come back and see the growing demand for them now. The German publishers are vying with one another to supply good popular editions. Among the latest offerings to tempt serious students are the miniature full orchestral scores of the Mephisto Waltz and the first and second Hungarian rhapsodies for only a mark and a half each, and of the "Faust" symphony (which the New York Philharmonic will play soon) for six marks. These are published in Leipzig by J. Schuberth & Co.

Art

CONGRESS OF ARCHÆOLOGY.

Rome, October 26.

The Third International Congress of Archæology, which held its sessions in Rome from the 9th to the 16th of the present month, but which, with the excursions to Naples, Pompeii, and the surrounding country, lasted a full week longer, has been in every way, even down to such a detail as the weather, a notable success. The American delegates were Profs. A. L. Frothingham of Princeton, G. M. Whicher of New York, and J. C. Hoppin of Washington. Many universities, academies, museums, and other learned bodies were also represented. The small English and American attendance, due to distance and the early beginning of the academic year, is much to be regretted.

The enormous field covered by the science of archæology made it necessary for the Congress to divide itself into twelve sections. In the sections on Oriental and pre-Hellenic archæology, Sir A. J. Evans contributed a sketch of a new edition of the classification of the Minois epochs. He now goes back to the division of the Minoic civilization into three periods, based upon the three styles of pottery that have been found. He observed that the stratifications afterwards found at Cnossos confirm such a division. He holds that communication between Crete and Egypt existed before the year 2000, and showed how the recent discoveries of Ægean remains in Egypt have gone to prove the synchronisms he had already maintained. Still another communication from Professor Halbherr of Rome on the Minoic stratifications was read in the author's absence. Now that the excavations at Hagia Triada have been completed, it can be definitely affirmed that the stratification there agrees with that established by Evans.

In the fifth section, on the history of classical art, the great sensation was Professor Frothingham's essay on the true origin and history of the Arch of Constantine, a part of which has already been published in the last number of the *American Journal of Archæology*. It has generally been supposed that the essential, structural portion of this arch was built in the time of Constantine, but that the architect took eight reliefs from the attic of the arch of Marcus Aurelius, four bas-reliefs from Trajan's arch, and eight medallions from the arch of Domitian or Hadrian, and affixed them somewhat clumsily to this arch. Professor Frothingham is convinced, on the contrary, that it was built by Domitian, and that after this Emperor's death in 97 A. D., in consequence of the *memoriæ damnatio* immediately pronounced upon him by the Senate, it was partly destroyed. We know that it was decreed that his name should everywhere be erased, and everything obliterated that suggested his memory. In fact, Dio Cassius says that his triumphal arch was thrown down. Professor Frothingham's theory is that it was not entirely destroyed, but that everything about it was effaced which could recall the tyrant's memory; that the attic was thrown down, damaging the main cornice in its fall; that the triumphal frieze under the cornice was torn away, because it was a reminder of Domitian, but that the eight medallions were left because they were nothing but *genre* hunting-scenes. It was then left in this condition, undecorated, for about a hundred years, but in the third century, when the city was poor and no arches were erected except that of the Emperor Gordian, it was used as a sort of generic triumphal arch for whatever emperor received a triumph, and to commemorate each triumph bas-reliefs were added. Finally, in 313 the arch was re-dedicated to a single emperor, Constantine, and its restoration completed. The proofs for this remarkable theory seem to be entirely sound and convincing, though naturally so revolutionary an opinion will need some time before it can overcome all others.

In the same section, number five, Dr. E. Boise Van Deman, fellow of the Carnegie Institution of Washington, read a paper on the development of brick-faced concrete construction, which indicated some of the results of her remarkable investigations, which are by no means ended, into the history and nature of Roman concrete building. Her plan is, by the careful study of the concrete itself, and of the mortar and bricks, tiles, or other facing materials, in monuments of which the date is known from other evidence, to arrive at what may be called a building-canon for every period; and, furthermore, having fixed these canons, to determine the chronology of buildings whose dates are either unknown or have been wrongly attributed. No such attempt had ever been made except by Middleton, in his "Remains of Ancient Rome," who, however, studied only brick facings, and those incompletely. Miss Van Deman has been able to show, for example, that in the various eras, as the Augustan, the Flavian, and that of Trajan, Hadrian, and the Antonines, with their sub-periods, the concrete itself, as well as the facing-bricks and the mortar in which they are laid, have certain well-marked characteristics that distinguish them from the work of other periods. The era of Trajan, Hadrian, and the Antonines is in this way shown to have marked the highest point in building of this kind, the periods before showing a gradual improvement, and those following a gradual decadence. But what perhaps is of chief immediate interest is that she can now prove that, as many have long suspected, the brick facing was used as a setting-frame for the concrete, and that wooden frames were not employed for this purpose, as Middleton and others have supposed. As to the relief arches so often found in the brick or tile facings, which also were a sore puzzle to Middleton, since, never being exposed to view, they could not be ornamental, and were, as he supposed, unstructural, Miss Van Deman is of opinion that they were decidedly of structural value, being used to reinforce the (facing) wall.

In the section on Christian archæology, number eleven, Prof. Orazio Marucchi, De Rossi's distinguished pupil, presented an important paper on the latest researches in the Roman catacombs, especially the discoveries that have been made in the last two years in the catacombs of Domitilla concerning the Christian family of the Flavii, that is, Flavius Clemens, consul in 95 A. D., cousin to the Emperor Domitian, and his wife, Flavia Domitilla. There has come to light a tomb-inscription of a certain Narcissus, slave of Agrippina Augustea, in which his wife, the same empress's slave, is also mentioned. Marucchi's conclusion is that this is the Narcissus mentioned by St. Paul in the Epistle to the Romans, 16:11, which would be in accordance with the high antiquity he ascribes to these catacombs. In their vicinity have also been discovered remains of the tombs of the martyrs Achilleus and Nereus, from which it may be inferred that their martyrdom took place in the second century at latest, and not during one of the latest persecutions, as some have supposed.

The labors of the Congress were enlivened and diversified by excursions to Cervetri and Ostia in addition to the final excursion to Naples and Pompeii, by a largely attended banquet, and by receptions offered by the Sindaco of Rome and the Minister of Foreign Affairs. The next Congress will be held at Algiers in Easter week of 1915.

H. E.

Casual addresses of a graceful and well-informed sort make up the bulk of Lord Redesdale's "A Tragedy in Stone and Other Papers" (Lane). With the restoration of the Tower of London the author was intimately concerned, and the title essay which briefly sketches the annals and architectural vicissitudes of the Tower is excellent good reading. Other essays are "Art and the Exact Sciences," "Leonardo da Vinci," "The History of Paper," "Apologia pro Horto Meo," a defence of exotics in British gardening. The more important and larger part of the volume is given up to reminiscences of Japan before the new era of Meiji. Here we especially like the vivid little paper "Feudalism in Japan," which is based on the author's actual observation of the brawling life of the last of the military daimios and samurai. Lord Redesdale writes with an amenity quite rare in these days and distinctly refreshing.

An interesting discovery has just been made in Rome. In the demolition of a portion of the old Palazzo Costa, close to the Church of St. Marcellus, many fragments of inscriptions have been found, among them one which has been attributed to Pope St. Damasus. This discovery caused the authorities to proceed cautiously with the work, and a careful examination brought to light, considerably below the actual level of the city, a building, the walls of which appear to date from the third century A. D. The general belief is that this building is an ancient Christian baptistery. A commission has been appointed to examine it, and the work of the demolition of the Palazzo Costa has been suspended.

Sir Reginald Lister, British Minister to Morocco since 1908, whose death at the age of forty-seven is reported from Tangier, was the author of an authoritative work on Jean Goujon, the French sculptor and architect.

Louis-Auguste-Théodore Rivière, the sculptor, who died in Paris Saturday, aged fifty-one, has several specimens of his work in Luxembourg Museum, including Phryné and Les Deux Douleurs.

Finance

AN "AFTER-ELECTION MARKET."

The passing of a Presidential election week without an "after-election boom" on the Stock Exchange marks the end of a rather long tradition. Prior to the election which ended the exciting free-silver-coinage campaign of 1896, the Stock Exchange had greeted the actual election news according to its mood of the moment, and for the most part it advanced or declined, as the case might be, in accordance with such other and non-political influences as had prevailed before the voting. But beginning with 1896, each of the four Presidential elections which preceded the present year has been followed by a furious rise on the Stock Exchange when the news was known—a rise so impetuous that speculators sat up all night in Wall Street and began to buy American stocks in London before even the London Stock Exchange had opened, and seven or eight hours before the New York Exchange had begun business for the day.

The election of 1912 provoked no demonstration of the sort. No one could say, even two or three days after November 5, whether the Stock Exchange was pleased or disconcerted with the news. The one unmistakable fact was that the "after-election boom" tradition had gone its way with the oil-cloth capes, the exceedingly ill-smelling kerosene torches, and the processions of patriotic but footsore business men up Broadway, without which it used to be thought that a President could not be properly elected. It has apparently departed for the same reason as they—because the community made up its mind that there was no sense in them.

Having watched for two months the "curb odds" of 4 to 1 on Wilson, and having awaited unsuccessfully an "election scare" on the Stock Exchange, Wall Street seemed to have made up its mind on Wednesday morning that what happened the day before was precisely what it had expected. There were one or two tentative experiments on the Stock Exchange, first with an appeal to belief that everything would go well now that the vote had been counted, and next with an appeal to belief that ruin stared us in the face because the opposition had captured Congress. Each experiment attracted interest for an hour or two; then things settled down, and the Stock Exchange gave itself up to desultory discussion as to how Roosevelt got Pennsylvania, why California took four days to find out whom she had voted for, and whether Taft could hold Idaho.

In short, this appears to have been one of those occasions when the simple-minded Stock Exchange looks forward to a given event as certain to alter the whole financial position, only to find itself, after the event, confronted again with the same old considerations as before. Fortunately, those considerations are in the present instance such as excite agreeable emotions. A week, moreover, in which Wednesday reports the largest monthly iron production in the country's history, and in which Friday adds 150,000,000 bushels to a corn crop whose previously estimated size broke all records, cannot be said to have been limited, in the matter of interesting news, to the events of Tuesday.

Sometimes it is advisable to turn one's eyes elsewhere than to the Stock Exchange, in order to see what is happening. The largest crops of corn, oats, rye, and hay in the country's history; the second largest crop of cotton; the third largest crop of wheat; good prices for all these crops; a high-record output of steel and iron; urgent demand for both of them by consumers; monthly earnings on the large railway systems which surpass all precedent for the period, and a volume of general business which, measured by the country's total Clearing House exchanges in October, broke all monthly records—the bearing of this on earning capacity, investing capacity, and capacity for industrial progress, is obvious enough. But people are somewhat apt to overlook its bearing in certain other directions.

It has very positive relation to such lately disquieting phenomena as social discontent, demand for haphazard legislation, clamor for the upsetting of established institutions of government, and enthusiasm for every new and half-baked political invention. How much the new prosperity had to do with the vote of November 5, is no doubt debatable. But as to what influence it will exert on politics and the public temper during the next twelve months, we have a right to judge from the unvarying past experience of governments with the effect of hard times and good times on political history.

There is left, of course, the tariff question. That is an old friend with many faces; we seldom fail to renew acquaintance with it, just before and just after a national election, and the Stock Exchange has been only human in beginning to talk, in a somewhat desultory way, of what we shall do if the tariff revision programme of the new Administration should "unsettle business." But circumstances alter our attitude towards such matters, and Wall Street is not fond of beating the air merely for purposes of sentiment. Perhaps—the general condition of things financial and industrial being what it is—we shall find Wall Street, after insisting for a while that if anything is done with the tariff, it will "spoil the trade revival," suddenly betaking itself to the more agreeable argument that the prosperity of the present season is too sound and strong to be shaken by fractional changes in the import duties, and that, with legitimate demand in almost every American industry running beyond available supply, the business community will be better employed in keeping up with such demands than in indulging in sorrowful recollections of 1894.

Just Ready

Some English Story-Tellers

By Frederic Taber Cooper

A book of the younger novelists: Conrad, DeMorgan, Hewlett, Phillpotts, Kipling, Locke, Galsworthy, Bennett, Hope, Sinclair, Ollivant, Hichens, etc. *With portraits.* $1.60 *net.*

The Dial called his "Some American Story-Tellers" "an invaluable source of information . . . interesting."

Germany and the German Emperor

By G. H. Perris,

Author of "Russia in Revolution," etc.

A profound, far-reaching study of the modern German character as an evolution of German political history. $3.00 *net.*

Henry Holt & Co., 34 W. 33 St. New York

THE ENGLISH HOUSEWIFE in THE SEVENTEENTH and EIGHTEENTH CENTURIES

By ROSE M. BRADLEY.

With 11 full-page Illustrations.

8vo. $3.50 net

Describes the home life of English housewives in this period, and the influences which have brought about changes in housekeeping, styles of furniture, social customs, etc. The author has had access to some hitherto unpublished journals and account-books which throw added light upon the manner of living and the expenses incurred by private individuals.

Longmans, Green, & Co.

The MAN WHO CAME BACK

By JOHN FLEMING WILSON

This is the story of the primrose paths trod by a reckless young prodigal, spoiled by great wealth and dissipation and cast off by his father, who "strikes bottom" in a Shanghai slum. It is the story, too, of how a wanton of the music halls recalls him to himself, and of how, thanks to her, he resolutely "came back."

12*mo. Illustrated by Bracker.* 75 *cents net.*

THE CAT

Being a collection of endearments and invectives lavished by many writers upon an animal much loved and much abhorred. Selected and arranged by **Agnes Repplier,** author of "The Fireside Sphinx," etc. Illustrated by **Elizabeth F. Bonsall.**

Prefixing her selections with an essay instinct with the charm of one of the most delightful of familiar essayists, Miss Repplier has here brought together the finest passages in literature devoted to the cat. 16*mo. Illustrated.* $1.00 *net; postpaid,* $1.08.

STURGIS & WALTON CO.
31-33 East 27th Street, New York.

THE LETTERS OF ULYSSES S. GRANT

Edited by His Nephew

JESSE GRANT CRAMER

With portraits. $1.75 *net. By mail* $1.90

In this volume have been gathered together the letters that Grant wrote to his father and his youngest sister during the anxious months preceding the Civil War and during strenuous years of campaigning. It is a human document of rare value—a revelation of character as well as a record of military achievement.

LETTERS AND MEMORIALS OF

Wendell Phillips Garrison

Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net, postpaid.

Houghton Mifflin Company
BOSTON NEW YORK

A LIST OF UNUSUAL BOOKS

FICTION

One of the Multitude — By GEORGE ACORN

With an introduction by Arthur C. Benson

"Just such a heart-stirring and thought-evoking chronicle as that with which Mr. George Meek, under the sponsorship of Mr. H. G. Wells, arrested the attention of the English-reading world two years ago."—*The Dial.*

$1.25 *net. Postage* 11 *cents extra.*

The Vanishing Man — By R. AUSTIN FREEMAN

A detective story of which a hardened reader of detective stories for sixty years states: "Of course Conan Doyle has some wonderful yarns, but is there anything that can compare with this?"

$1.25 *net. Postage* 13 *cents extra.*

The Squire's Daughter — By ARCHIBALD MARSHALL

Author of "Exton Manor," etc.

English country life, and the characteristics, foibles, peculiarities, and personalities of what are called "County people," written by an English novelist who follows very successfully in the steps of Anthony Trollope.

$1.25 *net. Postage* 15 *cents extra.*

NON-FICTION

On Emerson, and Other Essays — By MAURICE MAETERLINCK

Of interest, not alone as searching yet sympathetic criticisms of great philosophers by a fellow-philosopher, but still more by reason of the light they throw on the development of Maeterlinck's own philosophy, are these essays on Emerson, Novalis, and others.

$1.25 *net. Postage* 11 *cents extra.*

A Miscellany of Men — By G. K. CHESTERTON

Every new volume of Chesterton's essays seems more brilliant, breezily humorous, and astonishingly clever than the last. Nor must one hastily conclude that the author is not profound because he is constantly witty and frequently funny. On the contrary, he reasons admirably and sees keenly and justly. And this combination of snap and sparkle with underlying solid sense makes him peculiarly attractive to clever people.

$1.50 *net. Postage* 14 *cents extra.*

Dancing and Dancers of Today

By CAROLINE and CHARLES H. CAFFIN

The modern revival of dancing as an art, with particular emphasis on notable modern dancers, and a discussion of the history and development of the various forms of dancing they represent.

With many illustrations from photographs of famous dancers. $4.00 *net. Postage* 31 *cents extra.*

Reminiscences of a Diplomatist's Wife — By Mrs. HUGH FRASER

A Continuation of "A Diplomatist's Wife in Many Lands"

Another book from that same accomplished sister of Marion Crawford, who has already given the literary and artistic world two delightful volumes of sensible and witty gossip.

"If everyone enjoys Mrs. Hugh Fraser's 'A Diplomatist's Wife in Many Lands' as much as I have," said the noted critic, Miss Jeannette L. Gilder, "the book will be one of the most popular of the season." Enough readers have enjoyed it to make it one of the most popular books of its kind for two seasons.

Illustrated. $3.00 *net. Postage* 25 *cents extra.*

The New China — By HENRI BOREL

"The best of its class, which gives a series of pictures of the changes that have taken place in the oldest empire in the world is THE NEW CHINA, by Henri Borel."—*Boston Transcript.*

Illustrated. $3.50 *net. Postage* 17 *cents extra.*

Publishers **DODD, MEAD & COMPANY** New York

"I have read your last book with solid satisfaction and it shall be one of my pleasures to make as many people read it as I can reach. It is full ripeness and mellowness—worth tons of ordinary socialist prattle on that subject," writes John Graham Brooks to Charles F. Dole, author of "The Burden of Poverty." *Postpaid* 55 *cents.* B. W. HUEBSCH, 225 Fifth ave., New York

---

On the Art of the Theatre

By EDWARD GORDON CRAIG

8vo, boards, with illustrations, $2.00; by mail, $2.14

The most important book about the theatre published in years.

Charles H. Sergel & Co., Chicago

THE GREAT ART GIFT-BOOK OF THE YEAR

ART By Auguste Rodin

(Translated from the French of Paul Gsell by Mrs. Romilly Fedden.) With over 100 illustrations in photogravure and half-tone. Buckram, $7.50 net; three-quarter levant, $15.00 net; carriage additional. A book which takes its place at once as the most important art book in years. It covers practically the whole range of art, and abounds in memorable analyses of the works of the masters of painting and sculpture, ancient and modern. *Send for descriptive circular.*

Small, Maynard & Co., Publishers, **Boston**

Magazine excerpts on all subjects supplied. Let me know what you are interested in. H. Williams, 105 E. 22d St., N. Y.

From the Fall List of **E. P. DUTTON & COMPANY** Publishers New York

THE NEW NOVEL BY

Mrs. Henry de la Pasture (LADY CLIFFORD) The Honourable Mrs. Garry

Author of "Peter's Mother," "The Lonely Lady of Grosvenor Square," "Master Christopher," etc. $1.35 *net; postpaid,* $1.47

"The shining merit of this story from a gifted and trained pen lies in the fact that its complicated and engrossing plot springs direct from character and environment. . . . There is more in this story than consummate craftsmanship. It has a living quality. . . . It is a story worth while in a day of much arid fiction."—*New York Tribune.*

BIOGRAPHIES RICH IN PERSONALITY

Michael Angelo
By ROMAIN ROLLAND. With 24 plates in monochrome. Just ready. *8vo.* $2.00 *net; postpaid,* $2.13.

THE LAST FRONTIER: The White Man's War for Civilization in Africa

By E. ALEXANDER POWELL, F.R.G.S.,
Late of the American Consular Service in Egypt.

"Morocco, Algiers, Tripolitania, Equatoria, Rhodesia, the Sahara, the Sudan, the Congo, the Rand, and the Zambesi; . . . with your permission, I will take you to them all, and you shall see, as though with your own eyes, those strange and far-off places which mark the line of the Last Frontier."

This promise Mr. Powell gives in his foreword and makes good in eleven vivid chapters. *Splendidly illustrated with photographs.* 8vo, $3.00 *net; by mail,* $3.28.

A Camera Crusade Through the Holyland

By DWIGHT L. ELMENDORF

The author writes as well as he lectures; that is all need be said of the first third of this book which is text.

But the last two-thirds are the most beautiful clear full-page photographs—100 in all—of the significant scenes of the Holyland. No one could come nearer to seeing the region without going there than by seeing these pictures. There is no book anything like this in that respect; no such collection of pictures. A list of biblical passages applying to each is given on the page opposite each.

$3.00 *net; postpaid* $3.38.

New Trails in Mexico

By CARL LUMHOLTZ, M.A.
Author of "Among Cannibals," "Unknown Mexico," etc.

Dr. Lumholtz has a very deep love of nature, and his own beautiful descriptions are enhanced by two color plates and many illustrations. But he also has a thorough and large practical knowledge, and his exposition of the conditions of soil, the opportunities for agriculture and mining, is enhanced by two splendid maps made by himself.

Part of the country which Dr. Lumholtz journeyed through had never seen a white man. *With numerous illustrations, including 2 color plates and 2 maps. Large 8vo.*

Price $5.00 *net; by mail* $5.49

Italian Travel Sketches

By JAMES SULLY
University College, London.

A record of many years of wandering in Italy by a well-known English writer and scholar. *With over 20 full-page illustrations by P. N. Boxer.* $2.00 *net.*

True Tales of Arctic Heroism in the New World

By Major-General A. W. GREELY, U.S.A.

Partial List of Contents: The Loyalty of Philip Staffe to Henry Hudson—Franklin's Crossing of the Barren Grounds—The Discovery of the Northwest Passage—Sonntag and Hans Hendrik—Rae and the Franklin Mystery—The Shipwreck of the *Hansa*—Parr's March from the Great Frozen Sea—The Missionary's Arctic Trail—Tyson's Marvellous Drift—Relief of American Whalers at Point Barrow, etc.

With illustrations and maps. $1.50 *net; postpaid* $1.65.

The Wilderness of the North Pacific Coast Islands

By CHARLES SHELDON
Author of "The Wilderness of the Upper Yukon."

The vivid narrative of Mr. Sheldon's experiences while exploring and hunting for wapiti, bear, and caribou on Vancouver, Queen Charlotte, Montague, and Admiralty Islands, off the coast of British Columbia and Alaska. His adventures, especially that with the big bear of Montague Island, are as thrilling as they are novel. *With illustrations from photographs and five photogravures from drawings by Carl Rungius.*

$2.00 *net; by mail,* $2.19.

The Arctic Prairies

By ERNEST THOMPSON SETON

Illustrated with the Author's sketches, photos, and maps.

$2.50 *net.*

PROFESSORSHIP—A gentleman, for several years professor of chemistry at a State university, and who has since had experience in chemical industries, desires to return to University work as professor of pure or applied chemistry. Abundant evidence as to qualifications, professional standing, and exceptional teaching ability can be produced. Graduate of leading universities at home and abroad. . Address: "Spectemur," care *The Nation.*

Published November 12.

Kühnemann's Schiller

By Eugen Kuhnemann, Professor of Philosophy in the University of Breslau, Germany, Translated by Katharine Royce, with an Introduction by Josiah Royce.

In two volumes—the set, $3.00.

Three distinctive features mark this work. First, it is an effort to reinterpret the permanent significance of the poet Schiller, not only for German literature, but for the literature of the world. Second, it carries out extensive, comparative studies of the relation of Schiller's dramas to dramatic poetry. Third, it contains a careful and novel account of the influences which determined Schiller's development as an artist and as a man. The book will appeal to students of comparative literature or to any one who wishes to become intimately acquainted with Schiller's mind.

IMPORTANT BOOKS

HEREDITY AND EUGENICS. By JOHN M. COULTER, WILLIAM E. CASTLE, EDWARD M. EAST, WILLIAM L. TOWER, and CHARLES B. DAVENPORT.

A book intended to present the recent developments of knowledge in reference to evolution, heredity, and eugenics, and related subjects. Five of the leading investigators in this field have collaborated in its production, and the result is a work which will appeal to the general public, because it presents the latest conclusions in a popular and extremely interesting manner. The authors are eminently fitted to discuss that branch of the subject covered by their respective contributions to the work.

312 *pages*, 8*vo*, *cloth; postpaid* $2.70.

THE MECHANISTIC CONCEPTION OF LIFE. Biological Essays by JACQUES LOEB, Head of the Department of Experimental Biology, Rockefeller Institute for Medical Research.

This volume consists of nine chapters written on different occasions, and mostly in response to requests for a popular presentation of the results of the author's investigations. The layman is led into the wonderful realms of biology, where he is made to see with understanding eyes things which heretofore have had no meaning for him, or about which he has at best speculated and thought with but partial comprehension.

238 *pages*, 12*mo*, *cloth; postpaid* $1.65.

AGRICULTURAL EDUCATION in the PUBLIC SCHOOLS. By BENJAMIN M. DAVIS.

In this book Professor Benjamin M. Davis has attacked the problem of the co-ordination of all the agencies now at work on the problem of agricultural education. He had performed a service which will be appreciated by all who have any large knowledge of the problem and of the difficulties which the movement encounters. He has made an effort to canvass the whole field and to give a detailed exposition of the forces employed in building up a rational course of agricultural education. He has presented more fully than anyone else the materials which define the problem and which make it possible for the teacher to meet it intelligently. The annotated bibliography at the end of the book will do much to make the best material available for anyone desiring to get hold of this material through independent study. The book serves, therefore, as a general introduction to the study of agricultural education.

170 *pages*, 8*vo*, *cloth; postpaid*, $1.12.

The Nation

NEW YORK, THURSDAY, NOVEMBER 21, 1912.

The Week

President Taft, as empowered and directed by Congress, has fixed the rates of toll to be charged vessels using the Panama Canal. In this he has been guided by expert advice, and the rates, being virtually the same as those soon to be in force on the Suez Canal, cannot be deemed unreasonable. Whether they will, as Prof. Emory Johnson believes, make the Panama Canal self-supporting after twenty years, is open to doubt. There are too many uncertain elements in the problem. The amount of shipping that will seek the Canal, the cost of maintenance and of administration, cannot at present be accurately determined. As the estimates of the expense of building the Canal were pushed up from time to time, we suppose that most people came to the conclusion that it can never be made to "pay" as an investment. Nor do we think that the country has been deeply concerned about that. To have carried the vast enterprise through to success, and to have opened this waterway to the world's commerce, will be a national achievement into the cost of which patriotic pride will not inquire too narrowly.

But the nation has another interest in the matter which the President does not mention in his proclamation establishing the Panama tolls. We refer, of course, to the question of exemption from tolls of our own coastwise traffic. Money losses in the operation of the Canal the country can face with equanimity, but if its honor is seriously impugned, that is a matter which ought not to let patriotism sleep. The question whether such a discrimination is not in plain violation of a treaty will not down. Business men as well as public officials see its critical importance. This was shown by the recent action of the New York Chamber of Commerce in voting down a report which sought to dispose brusquely of the contention that the Hay-Pauncefote treaty called for absolutely equal treatment for all ships, including our own. This dispute about the due legal interpretation of a treaty is eminently one to be referred to the Hague Tribunal. The United States is expressly committed to the policy of so submitting such questions. If Great Britain asks that the controversy about Canal tolls be sent to The Hague, how can President Taft possibly refuse? In view of his record, we do not believe that he will. But what will the Senate do?

It is generally conceded that President-elect Wilson was wise in announcing an early extra session of Congress; but the new Administration will have no easy task on its hands. Its difficulties will be three in number: it must so order its programme that its majority at the extra session will agree on the tariff legislation. It must not do too little. It must not do too much. That the party would find its position awkward if it made mere pretence of revision, must be apparent to every one. It is committed to thorough revision, not only by its platform but by the speeches of its candidates. But, on the other hand, it is also committed, both by platform and candidates, to proceeding with its revision in such manner as to injure no legitimate industry. And even if this course had not been prescribed, common sense and political experience would commend it. The situation may thus seem to be unpleasantly involved. We do not so regard it, however, and for two good reasons. In the first place, the new Congress will be fortunate in having already before it the four tariff-reduction bills—affecting the steel, cotton, wool, and chemical schedules—all of which were drawn with care by the House committee in the present Congress, all of which passed the House, and all but one of which passed the Senate. Here is a ready basis for the work of the extra session. Nothing will hinder the remodelling of any of these measures, and the remedying of such defects as may have arisen from the fact that the tariff bills of 1912 were not expected to run successfully the gantlet of a Republican Senate and a Republican President. Furthermore, when thus resubmitted, these bills are reasonably sure to command the votes of the insurgent Republicans in the upper house.

If the party leaders were to be asked why the extra session should not immediately proceed to revise the rest of the tariff schedules, common sense and political experience would give the answer. No such revision, whatever its character and purpose, ought to be proposed without the most careful preliminary study of the problem. Nor can it, on the other hand, be safely put through except with constant view to the probable revenue from the altered duties, in its relation to the needs of government. But the new Secretary of the Treasury will not take office until the fourth of March; his budget of public revenue and expenditure will not be submitted until the ensuing December, and it will even then have to be judged in the light of the general plans of the appropriation committees. A comprehensive and general plan of tariff revision, as early as March or April, would therefore be subject to inevitable handicap. When to this consideration is added the fact that only with the assembling of the extra session will the Congressional committees be appointed, and the further fact that the committees which must prepare the tariff bills will consist in an unusual degree of men new to that exacting task, the wisdom of not attempting to do too much in the extra session should be manifest.

The "greatest political miracle of the age," according to the New Orleans *Times-Democrat*, occurred in Louisiana on Tuesday of election week, when in some places more votes were cast on Constitutional amendments, many of them of little importance, than for President. In one New Orleans precinct every voter cast his ballot in favor of nine of the nineteen amendments, and in another every voter but three voted for the entire batch. Such unanimity arouses suspicion in the mind of the *Times-Democrat*, which attributes it to a meek following of instructions from ward bosses. Ten of the nineteen amendments were carried, no less than four of which exempt some form of property from taxation. One of these is a glaring illustration of the details with which we load our State Constitutions; it extends the tax-exemption time of the Pan-American Steamship Company. The amendment receiving the largest vote was one providing for the levying of a tax for the purpose of paying Confederate pensions. Among the amendments rejected were one allowing women to serve on school and charity boards, and one providing for the recall.

The Supreme Court's decision in the Bathtub Trust case is of great importance not only in relation to the particular question involved, but also as furnishing strong confirmation of the hold of the law in general on the problem of monopoly. What the Court has done in this case with a plea in defence of immoral monopolistic practices based upon alleged rights of patentees will all the more surely be done with pleas that have no such pretext behind them. The "rule of reason" expounded in the Standard Oil and Tobacco Trust cases is once again shown to be a rule of common sense, looking to the substance of the acts complained of, and not to their mere form. The favorite argument of the enemies of the anti-monopoly law—that if truly enforced it would make impossible thousands of contracts and arrangements which every one knows are an indispensable incident of modern business—already begins to wear the air of an antiquated, indeed an obsolete, notion. The kinds of conduct which are obnoxious to the prohibitions of the law, as it has been interpreted by the Supreme Court in decision after decision, are rapidly becoming plain enough for any person of ordinary honesty and intelligence to recognize without difficulty.

The meaning of the announced abandonment, temporary or permanent, of its proposed New England extension by the Grand Trunk Railway of Canada, is not yet clear. But the business men of such cities as Providence and Boston have drawn their inference at once, to the effect that it means surrender of the Grand Trunk management to pressure from the New Haven Railroad, whose monopoly of New England transportation facilities was threatened by the new undertaking. The Grand Trunk, which originally connected Montreal and the Great Lakes, and which is now building westward in Canada to the Pacific, was already connected by leased lines with Portland, Me., and, by ownership of the Central Vermont, had an outlet at New London, Conn. Its projected new line, chartered in 1910 as the Southern New England, was to run from Palmer, Mass., a junction point of the Central Vermont and the Boston & Albany, to Providence, R. I. A spur of the same line was to run direct to Boston, and another new line was to connect Boston with the north-and-south Grand Trunk line in Vermont. One-third of the Providence extension had been already graded, and some $2,000,000 had been spent. Clearly enough, an independent railway system with such connections meant competitive conditions on a considerable scale.

The version of the abandonment of work given out by Grand Trunk officers may possibly be conclusive. Montreal newspapers quote the president of that company as saying that no fresh offers have been made by the New Haven, and that no negotiations even for a "traffic agreement" are under way. It is also perfectly true that a railway company which places its loans in Montreal or London would not find this a convenient moment, with all the European markets upset by the Balkan affair, to raise large amounts for new construction. Nevertheless, the New England chambers of commerce are justified on the face of things in their misgivings. Charles M. Hays, that thorough railway man who, as president of the Grand Trunk, was able to impose his own larger views on timid London directors, went down with the Titanic; and the suspicion was natural that the New Haven management would seize that occasion, especially when it was followed by an unfavorable market for the Grand Trunk's loans, to renew its efforts at repressing a formidable competitor. The real situation, whatever it is, cannot be long disguised. In advance of conclusive information, all that need be said is that the blocking of this solitary movement for independent transportation service in New England, at a time when the public mind is stirred up in an unusual degree over questions of free competition and monopoly, would have a most unhappy effect.

Signs are increasing that city noises are at last becoming too much for even American nerves. Something has been accomplished in New York towards reducing the screech of boat whistles, but that old offender, the trolley car, still pursues its clattering way. An Alderman in a Western city is audacious enough to propose to get rid of the worst of its uproar. Looking back over the great improvement in transportation in recent years, he says there is no reason why we should not silence the noise of street cars. The one thing needful, in his opinion, is merely to fix attention upon the problem. When we really care for quieter streets, we shall find methods of obtaining them. What has been attained in eliminating smoke and smell from automobiles ought to be an encouragement to those who are undertaking anti-noise crusades. It is but a short time since a foul odor and a blinding vapor were apparently an essential part of the motor-car. To-day we actually arrest people for driving cars that "smoke," and Hiram Maxim, jr., has gone his father one better by inventing a motor-boat silencer.

Somewhat disquieting is the account of tenant-farming in the great Southwest which Charles W. Holman gives in *La Follette's Weekly*. According to him, the standard of living of the tenant farmer has steadily deteriorated and the problem of existence has grown more difficult as the system of wide landlord holdings has spread. Statistics are adduced to support this view. Thus, in Texas, Mr. Holman declares, the ratio of tenanted to owned farms has gone up decidedly. In 1900 tenants cultivated 174,991 farms; owners, 174,639; while in 1910 the figures had risen to 291,106 and 194,993, respectively. The South as a whole also shows growth of the tenant system. In 1880 tenants cultivated 36.2 per cent. of the total farms, while in 1910 they were working 53.1 per cent. Mutual misunderstandings between landlord and tenant; the desire of the owner to get a larger return from his acres, accompanied by his unwillingness to follow crop rotation or other modern methods, and a consequent feeling of futility and lethargy on the side of the cultivator, have combined to make the lot of the under-fed, overworked, and ill-housed tenant farmer a hard one. Some of Mr. Holman's suggested remedies are impracticable, but his picture of the actual conditions appears to be drawn without great exaggeration.

The old-fashioned doctor who fought disease with the aid of the pharmacopœia is apparently having a rather hard time of it. Long ago he gave up the centre of the stage to the surgeon with his marvellous instruments and daring operations. On other sides he is beset by the serum-therapist, the psycho-neurologist, the hygienist, the dietitian, the sanitarian, and the assorted flying squadrons of faith-healers. White pills and brown mixtures in bottles have fallen into sad repute. The physician who resorts to them falls under the suspicion of being something of a fogey or something of a quack. But, in justice to the old-fashioned general practitioner, it may be pointed out that a great many of the new fashions in the curative art impress one as being the old methods under new labels. To give anæsthetics nowadays is not enough; one must give an anæsthetic without frightening the patient. "Anoci-association" is the name for this formula of ether + psychology; but "anoci-association" is strangely reminiscent of the classical "bedside manner," and psycho-therapy is not unrelated to the familiar sugar pill.

A fund for the erection of a memorial to Charles Lever, in the British cemetery at Trieste, where the novelist, who was consul there, died forty years ago, is proposed by the British chaplain at that port. To the younger generation, the genial Irishman is only a name, if so much as that; but there are many old fellows to whom this suggestion will recall memories of pleasant hours in the company of a spirited and manly writer. Lever does not abide with us like Thackeray or Dickens; he was distinctly of the lesser breed of novelists and entertainers. But for this very reason, some of us experience a certain pang in thinking of the days when he helped to make life pleasant, which we do not feel in relation to the mightier masters. The age in which the Harry Lorrequers and the Charles O'Malleys and the Arthur O'Learys sufficed to attract and amuse persons quite as sober and serious as we all are to-day was an easier, a more livable, age than ours for the reading world; whether we estimate the loss as great or trifling, there is no question that the loss is there. The simple, hearty doings and sayings of true men, loving and hating and jesting and fighting; these, with no oppressive burdens of self-consciousness, and no thought of the bearing of their acts upon the salvation of the universe, sufficed to make the farrago of Lever's books, and we took them at their face value and were grateful. They also serve who thus lighten the burden of the day for thousands.

Rows in the House of Commons are no novelty. The Liberals, seven years ago, were guilty of much the same sort of boisterous breaking up of the session as the Conservatives indulged in last week. The rules are inefficient in the matter of dealing with disorder, and the Speaker can do little more than appeal to the gentlemen of England to leave off acting like rowdies. If they will not, his only recourse is to suspend the session. Such proceedings seem almost unintelligible to Americans, who are accustomed to see their presiding officers clothed with full power to preserve order, even to the point of calling in the police, if necessary. The English parliamentary tradition would be aghast at such extreme measures. At the very moment of denouncing the Liberals for weakening respect for the House of Commons, the fine flower of Tory chivalry feels privileged to turn it into a Bedlam. But sanity will soon be restored. The Conservatives have had their fling, have once more expressed their scornful contempt for the Ministry, and have displayed their splendid "fighting spirit." Presently, no doubt, the business of the House will be resumed. On a test vote, the Liberals showed that they had a majority of 109, and the absurdity of maintaining that such a majority shall not be allowed to determine the action of the Commons is too glaring.

One of the scandals of English politics has for years been the bestowal of peerages, baronetcies, etc., upon men who have made large contributions to the party campaign chest. Both Conservatives and Liberals have followed this practice, which in essence is not very different from our former custom of sending rich men to the Senate, or rewarding a man who has come down handsomely for election expenses by making him an Ambassador. But it must be confessed that the conferring of such "honors" by the Liberal party has an incongruous look beside its current denunciation of the House of Lords, and gives Tory critics a chance to make fine play about a "Radical Plutocracy." The case is made worse by the fact that a great many wealthy supporters of the Liberal party have been getting their recognition in recent years. The London *Nation*, though friendly to the Government, complains that the distribution of these honors has "never in the history of party" been so "lavish as during the last three or four years." It admits that some of the men singled out are worthy, but frankly states that of some others, "notably of a recent Privy Councillorship, the less said the better." Naturally, the Tories are saying more rather than less.

Gen. Savoff, chief in command of the Bulgarian army, has inevitably received the lion's share of praise and fame for the wonderful campaign which the troops under him have made. It is reported that this causes a certain soreness in some Bulgarian military quarters. There it is pointed out that Gen. Savoff had been in retirement since 1907, when he resigned as Minister of War, and resumed active duty only when the recent orders for mobilization were issued. From this it is inferred that he could have had little to do with preparing the plans for the offensive campaign which he has so brilliantly executed. But this does not necessarily follow, as the Bulgarian staff must have been for years at work on the plans which have just been carried out. Be this as it may, no one denies that Gen. Savoff has shown high skill in handling large armies, together with correct and rapid military intuition, and the ability to inspire his men with the determination necessary to strike blow upon blow. Savoff is now undergoing the inevitable comparison with Napoleon. One of his military maxims, the only one we have seen quoted, certainly sounds like modernized Napoleonic. It is: "Speed is trumps." This has surely been illustrated by the swift march of the Bulgarians to victory after victory. Gen. Savoff seems, also, to have acted upon that saying of Napoleon: "The general who keeps fresh troops for the day after a battle is nearly always beaten. You must give your last man to the battle, for the day after a complete victory there are no more obstacles before you."

CALIFORNIA AND THE PRESIDENCY.

For many days after the election the vote of California was still see-sawing between Roosevelt and Wilson. The process was followed with a mild interest throughout the country; but of excitement over the matter there was not a trace. Yet one shudders at the thought of the situation that would even now be confronting us if the election in the nation had been close, and the decision of the Presidency turned on California's thirteen electoral votes. There are few things in the immediate past for which the country has more reason to be grateful on this coming Thanksgiving Day than for the fact that the verdict of the election was emphatic and unmistakable, and especially that nothing turned on the settling of a close count in any State.

But, while the situation in California is of no practical importance in regard to this year's Presidential contest, it is of very great interest in its bearing on the advantages and disadvantages of our method of electing the President. The most conspicuous peculiarity of the existing system is that a bare plurality in any State suffices to cause the entire voting weight of the State to be cast into the scales on the side of the winner of that plurality. Situations of the utmost acuteness have arisen on this account; the most notable being that which ended in the casting of New York's 36 electoral votes for Cleveland against Blaine, in 1884. Exclusive of New York, the electoral vote stood 183 for Cleveland and 182 for Blaine, and the final count of New York's popular vote gave the State to Cleveland by a plurality of only 1,149 in a total vote of 1,167,169. That situation, moreover, is of a kind that is not only likely, but almost certain, to recur. In every election since 1884, with the single exception of 1888, there has been an immense electoral preponderance in favor of the winning party; but whenever the parties are nearly evenly matched, there is a chance that the contest may turn upon the electoral votes of some one State, or some group of two or three States, in which the popular vote is extremely close.

That this contingency points to a real and serious danger cannot be denied; and at first sight it might be thought that a system under which the votes of the States were not cast solidly, and under which the result was determined by the actual preponderance of the popular vote—either directly or through some method of State percentages—would remove that danger. But the fact, as a little reflection will suffice to show, is quite the opposite. The danger, be it understood, is not at all that of a failure to record "the popular will"—all methods are but expedients for roughly determining that. The danger is that of a contested election—contested not only on the score of downright fraud, but also on account of the decision of those innumerable cases of legitimate doubt about which absolute impartiality on the part of election officials cannot be expected. Well, the danger of bitter contests of this kind, far from being diminished, would be most seriously aggravated under a system in which the division of the vote in every State, instead of that in only one or a very few States, should become of critical moment in any close election. It is quite true that the vote is not likely to be so close in the country as a whole as in some single critical State; but under the other system, where the piling up of large pluralities in every State was the object of pursuit, a thousand disputes would assume importance where only a score are now of any consequence. Attention could not be effectively centred on the danger-points until too late; and instead of one Presidential count out of many being the occasion of critical tension, it would probably become the rule, rather than the exception, for the results of our national elections to be in greater or less measure clouded by doubt and protest.

There are many other considerations which confirm the conclusion that the existing system of solid votes by the States is, in spite of its faults, better than any that has been proposed in its place; but there is one that happens to be of peculiar importance. The conditions in the South may not be entirely satisfactory; but the country is evidently going to let that sleeping dog lie for a very long time; and even if a change should be made in this regard, the considerations we have in mind would continue to apply with almost equal force. The point about the South is that it habitually gives its vote solidly for the Democratic party, and that nobody disputes the result. But here is a case of what is often to be found in the domain of human affairs—that the part is greater, more difficult to handle, than the whole. The North and West acquiesce without reserve in the throwing of Georgia's total vote for the Democratic candidate, under a system in which every State disposes of its total vote as a unit; but once let the result depend on whether Georgia divides in the ratio of 13 to 1 or of 10 to 4, and it is impossible to imagine the rest of the country indifferent to the means by which that division—and the like in ten other States—is effected. And what is true in this radical fashion as regards the South is true in lesser measure of other parts of the country. No one can say to what extent the nation has been saved from contentions of the most ominous character through this incidental feature of our system of State autonomy.

THE PHILIPPINE OUTLOOK.

Hard upon the heels of the rejoicing in the Philippines over the success of the Democratic party, and the announcement that the bill for Philippine independence will be pressed to passage in the House, we have the inevitable prophecies of dire consequences. Unnamed army officers are quoted as pointing to Aguinaldo's appearance in the celebrations as being of sinister significance. We are told that already American capital is alarmed at the prospect of our withdrawal from the islands. The Filipinos themselves are, as usual, lost to shame. Are they not at this moment plotting how they are going to distribute the offices? Aguinaldo's return to public life is interpreted to mean that "he will be in the front ranks of the aspirants for public honors"; and Manuel Quezon, one of the Filipino delegates to Congress, is also accused of "carrying on political campaigns with a view to strengthening his position with his people at home." Knowing how reprehensible the public holds any American who aspires to office, we are sure that mere mention of this misconduct of Messrs. Aguinaldo and Quezon will suffice to damn them forever.

As to the flow of American capital into the islands, it went with knowledge that we had loudly proclaimed our intention of remaining there only as trustees. There was no promise to stay forever to protect investments. It is true that the present Governor-General, Mr.

Forbes, has done his best to lure "big business" into the islands, and that there are companies now forming to exploit their resources. But that cannot stand a day in the face of the Democratic pledges "to recognize the independence of the Philippine Islands as soon as a stable government can be established, such independence to be guaranteed by us until the neutralization of the islands can be secured by treaty with other Powers." Never did a political party make a more solemn or more deliberate pledge—now for the fourth time reiterated—nor one more clearly in accord with the highest traditions of this Republic.

That opportunists in plenty will protest against the Democratic policy we have no doubt. Government officeholders, particularly those in the islands, will explain at length that the Filipino is not and never can be made ready for self-government—at least, so long as they themselves are drawing salaries. All the old arguments so familiar in 1899 and 1900 will be brought out, and we shall once more be told how splendid it is that the sun never sets on "Old Glory." One ancient argument, however, the very language of the Democratic plank effectually disposes of. If the simple plan of neutralization is carried out, no one can revive the Japanese and German bogies. As every one in jingo circles knows, we had to make that bad bargain with Spain in 1899, or one of those two nations would in our stead have purchased that war and the lasting enmity of the Filipinos. Fortunately, there has been a marked change in the temper of the people since that time. The public knows now that annexation of the Philippines did not mean that we should get rich over night, or that, with the hoisting of the flag, Filipinos would be consumed with a desire to buy American goods. Most people of conscience are, moreover, beginning to have doubts about the manliness and desirability of holding millions of men and women under our control against their will. Still less, after our own experiences of recent years, do they wish to turn them over to the tender mercies of exploiting Trusts.

Two serious arguments will, however, be used to impress those who have thought only superficially on this matter. How about the wild tribes? And how about the possibility of these people governing themselves? The facts about the non-Christian tribes are that they constitute but 600,000 out of 7,600,000 people; they dwell in the mountain fastnesses, and, says Judge James H. Blount in his new book, "The American Occupation of the Philippines," "cut little more figure, if any, in the general political equation, than the American Indian does with us to-day." To those who have any doubts on this question we most heartily recommend this excellent volume from the pen of one who was an officer of volunteers in the war and subsequently a judge. He has not the slightest question as to the ability of the Filipinos to set up satisfactory governments. As far back as 1907, he wrote as follows:

> If three strong and able men, familiar with insular conditions, and still young enough to undertake the task, were told by a President of the United States, by authority of the Congress, "Go out there and set up a respectable native government in ten years and then come away," they could and would do it, and that government would be a success; and one of the greatest moral victories in the annals of free government would have been written by the gentlemen concerned upon the pages of their country's history.

Judge Blount has since seen no reason to change his mind; on the contrary, he is firmer than ever in this view. Under the promise of independence, he declares, a "very fair electorate of at least one-third, possibly one-half, of the adult male population, could be built up." The setting up of prospective Filipino States would, he says, "electrify the Filipino body politic," as would the mere definite promise of independence. But without that definite promise, nothing can be gained. Least of all would it be fair to deny self-government to millions because of a fraction of the uncivilized among them. We must, as Judge Blount says, make clear to all concerned, and particularly to the American grafter and Filipino demagogue, "that the government of a remote and alien people is to have no permanent place in the purposes of our national life."

PHILOSOPHICAL MR. GOMPERS.

At Indianapolis the trial of forty-five labor-union officials, indicted as a result of the McNamara disclosures, is now under way. At Rochester the annual convention of the American Federation of Labor, Samuel Gompers presiding, is now in session. The defendants at Indianapolis are men affiliated with the Federation of Labor. The Federation is supposed to have spent nearly a million dollars in the McNamara defence. Evidently, Rochester was under the moral necessity of taking cognizance of what was going on at Indianapolis. This is the way Mr. Gompers did it, in his opening address:

> This organization of ours is just as you find it. We are human. As humans we sometimes err. But our organization is a mighty power for human progress. In all other avocations it will be found that the highest and best is held up as a type, but in the labor movement it is the derelict who is selected as our representative type. Against this we protest. For high motives, for altruism, for the righting of wrongs, for the winning of rights, for human progress, there is no other body in the world, man for man, that will compare with the American Federation of Labor.

To catch the full force of this proud claim, compare Mr. Gompers with Mr. Ortie McManigal. Re-read the story of Mr. McManigal's pleasant little jaunts about the country in the pursuit of "jobs." Re-read the story of the Los Angeles explosion as told by J. B. McNamara to McManigal. After planting the infernal machine in the *Times* building, "J. B." wrenched off a gas jet in the basement:

> McNamara: Because when the explosion occurred, I wanted the whole building to go to hell.
>
> McManigal: And you knew there were so many people in there, too?
>
> McNamara: What's the difference? I was to make a good clean out and I did it. But I am sorry so many were killed.

In view of the high motives, the altruism, the righting of wrongs, which animated J. B. McNamara and Ortie McManigal, it is surprising that up till now the Nobel prize for idealism has not been divided between these two men.

Hypocrisy is not the word to describe Mr. Gompers's attitude at Rochester. Hypocrisy implies a *prima facie* capacity to deceive, whereas Mr. Gompers's statement would not deceive a child, no, not even if the child were as innocent as a labor-union official with dynamite stored about the premises, all unknown to him. Mr. Gompers was simply indulging in disgusting effrontery. Being human, the American Federation of Labor is liable to error. But the erring consisted in the pursuance of a policy of terrorism extending over years and carried out in cold blood. The Federation must not be judged by its "derelicts." But the derelicts in the McNamara disclosures were the directing officials of labor unions, many of whom are still holding office. In whatever city Ortie McManigal turned up for a "job," he was put into communication with the business-agent of the local union, from whom McManigal received orders and directions. And at the ironworkers' headquarters in Indianapolis a close watch was kept on McManigal's activities. Money appropriations were made, so that McManigal might devote himself single-heartedly to his altruistic mission. There seems to have been a fixed scale of remuneration. The fact that McManigal's paymaster "held out upon him," giving him $125 per "job" instead of the $200 appropriated to that purpose, may be brought to Mr. Gompers's attention as another instance of human frailty.

What Mr. Gompers might have said is that organized labor as a whole is not in favor of dynamite as a method of winning strikes. What he might have said is that the great majority of the rank and file in the American Federation of Labor is opposed to murder in industrial warfare. That would have been true. Violence has been a feature of labor conflicts, officially unsanctioned, but tolerated nevertheless, or even secretly encouraged. But there are degrees of violence. Violence will be practiced in the course of bitterly-fought strikes. At critical moments in such contests, passion may run even to the length of murder. But there is a vital difference between a crowd of riotous teamsters and 'longshoremen engaging in battle with strike-breakers, and a committee of union officials sending forth its emissaries of death as part of a deliberately planned campaign deliberately carried out. On broad human principles we may be sure that the rank and file of the American Federation of Labor would not approve of such tactics, because no group of two million civilized people would approve of them. Terrorism always emanates from a small minority in whose philosophy the end justifies the means.

So Mr. Gompers might justly have asserted of the ordinary member of the American Federation of Labor, that he is opposed to McNamarism and McManigalism. But that would have meant to condemn the present system of labor leadership. As it is, the prestige of Samuel Gompers is to-day badly shattered. To public opinion outside of organized labor he stands out as the head of a "conservative" labor movement which is now foully smeared with anarchy. To the members of organized labor he stands out as a leader who has allowed the odium of anarchy to be saddled upon them without the compensating prestige that comes from assuming a frankly revolutionary attitude. To throw bombs for the purpose of overthrowing the "capitalist" system is a comprehensible mode of procedure. But to pursue the conciliation of labor and capital by planting dynamite, is mad futility. With the stigma of McNamarism upon it, the American Federation of Labor under Gompers is an object of fear to the conservative citizen, and an object of derision to real revolutionists like the Socialists and the Industrial Workers of the World.

THE PROFESSOR AND THE MACHINE.

Professor Jastrow, of the University of Wisconsin, who, like Professor Cattell, of Columbia, has long been one of the leading spokesmen of the doctrine of professorial independence, gives in the *Popular Science Monthly* for November a somewhat rambling, but on the whole decidedly impressive, survey of the question. The article has a striking collocation of opinions from many sources, which serves to reveal how far the evil of excessive systematization, undue control, and unnecessary concentration of power has been felt by serious observers of our universities. The title of the article—"The Administrative Peril in Education"—is a catchword that ought to stick. Whatever particular harm or offence there may be in this or that *error* of administration, it is not errors or failures or inefficiencies that constitute the vital trouble. For it is the soul of university life, rather than the body, that the "administrative peril" touches; and the damage to that soul is done not by defects of administration, but by the exalting of the administrative ideal above the ideals of intellectual distinction and of personal individuality and freedom.

Criticism of the administrationism that pervades our universities most often takes the shape of an attack upon the dominance of the university president. In truth, this is not of the essence of the matter; but it is natural that it should attract the most attention. On this head, there is many a telling stroke in Professor Jastrow's paper, both from his own hand and from that of others. A combination of the two is presented in this passage:

> "When the wisdom of letting a man lord it over an aggregate of employees instead of conferring with a company of scholars is questioned, the answer is the efficiency with which the autocrat can get things done" (J. McK. Cattell). Efficiency undefined and unattached is either the most meaningless or the most dangerous of terms. . . . Even so directly utilitarian a thing as a signpost is efficient only when you know where you want to go and where not; the term should never be permitted to appear in educational discussions without a chaperon.

From many quarters, academic and other, are quoted judgments like this of the Springfield *Republican:*

> No single thing has done more harm in higher education in America during the past quarter-century than the steady aggrandizement of the presidential office and the modelling of university administration upon the methods and ideals of the factory and the department store.

Among the manifestations of the temper bred by this aggrandizement, one is peculiarly interesting: it is "an association, composed of the presidents and deans of a score of the foremost universities, which is sufficiently naïve or presuming to call itself 'The Association of American Universities.'"

But after all, as we have said, this undue exaltation of the presidency is not the essential matter. It is but the outward and visible sign of something that lies far deeper. Indeed, it is a curious fact that this very paper of Professor Jastrow's betrays the way in which the idea of the all-importance of administration, or at least of managing policy in some form, has permeated our university world. For, though nothing is plainer than that the writer has fully seized upon the essence of the matter, he shows an unconscious gravitation towards the prevailing point of view in the extent to which he dwells upon the question of the seat of administrative power, as compared with the question of the limits which should be set upon the range of that power, by whomsoever exercised. Probably no reform is more urgent than that of giving the faculty its proper place in the settlement of university questions, and it is natural that much of Professor Jastrow's argument should be directed to this subject; but it is nevertheless noteworthy that he says nothing at all about the danger of the democratic faculty government becoming in its own way inimical to individuality, to personal freedom, to the prerogative of intellect in the university. He is deeply concerned about the dignity of the profession; and doubtless this would be enhanced by raising the faculty to a position of headship, instead of inferiority, in the university government. But no improvement in its mere administrative status could effect that elevation of the professorate which would come from the removal of administrative pressure, irrespective of its source. It is not more scientific management, or "team work," or coördination, or subordination, but more individual freedom, that is needed to raise the tone of the professorate, and to attract into it strong minds and high natures.

Professor Jastrow himself is keenly aware of the real need, although he has not brought it out clearly in this article. How we are to advance towards the ideal held in view by him, and by the many writers whom he quotes, is a difficult question to answer. One of the serious obstacles to be encountered springs from that merging of the university with the college which, while probably a necessary outcome of our educational history, has given rise to much confusion of counsel. But progress in the right direction will be furthered by discussion; for the one thing most needful is that all who are interested in the higher education should become aware of the existence of the question, and of its seriousness. As Professor Jastrow puts it:

> The one paramount danger, the most comprehensively unfavorable factor affecting ominously the prospects of the higher education, is *the undue dominance of administration:* in policy, in measures, in personal relations, in all the distinctive interests of education and the welfare of ideas and ideals. What is imperilled most directly is the academic career: its worth, its service, its security, its satisfactions, its attractiveness to the higher types of men.

FLIRTING WITH FAME.

Upon whom will the literary spotlight in England next fall? Just now it appears to be flashing a bit aimlessly among old favorites. A new play by Shaw and revival of his old ones have put the public in a flutter, but nothing like the original flutter; Conan Doyle is out with what his publishers call an improvement upon Sherlock Holmes; Mr. Wells has just had his say on the most important institution in life, "Marriage"; and a new work is advertised by A. C. Benson. Yet from all this flurry there emerges the definite impression that Mr. Bennett has at length stepped out of the limelight and that his place will probably be taken by some one who has never been there before. Meanwhile there have appeared, within the past month or so, three books from the same pen. A glance at Who's Who reminds us that their author began writing nearly two decades ago, that he has experimented with several literary types, and, to judge by his present rate of issue, that he probably has a trunk full of unpublished manuscripts ready to be put forth the moment the public shall give the word. What more promising candidate for literary radiance has England to offer? We are not really prophesying, we are not exploiting, we are simply pondering over one who is just now assailing the public with his ideas—Hilaire Belloc.

Mr. Belloc has to his credit, in the immediate present, a highly diverting mystery story, "The Green Overcoat"; "The Four Men," being mainly a symposium shared in by "Myself," Grizzlebeard, a Poet, and a Sailor, on an imaginary walk through Sussex; and a book of essays, "This and That and the Other." A look at his past marks him as a versifier, a novelist, and a writer of miscellaneous articles, with a bias for history and the out-of-doors. Like Mr. Benson, he is an academic, having been for the past year or so head of the English department at East London College. He has already shown a many-sided activity, and on occasion has contrived to be in the forefront of public discussion, as a member of Parliament and especially in his defence of Catholicism. But the fact that he is so much better known in England than in this country makes it clear that he has never quite attained genuine popularity. One can get his flavor by turning to his latest essays, which we fancy were collected from the usual newspaper column. There is the smartness which seems to be required of the London set. If Chesterton could demonstrate how admirable a creature is a bore, Mr. Belloc has closely reasoned praise for the dupe. With him, too, pure logic squints at life's foibles. Assuming ethical indifference for the purpose of satire, he points out the most advantageous way to lie, to deceive; or to gain useful acquaintance with the great:

> Another very good trick, which still possesses great force, is to repudiate any personal acquaintance with the celebrity in question, and treat him merely as some one whom one has read of in the newspapers; but next, as though following a train of thought, to begin talking of some much less distinguished relative of his with the grossest possible familiarity.

But Mr. Belloc at this game is much more human than his predecessors. What saves Mr. Chesterton's essays from the appearance of mere jugglery is his steady plea for orthodoxy; Mr. Bennett's smartness is tempered by common sense. Mr. Belloc, on the other hand, partakes of a spirit of indulgence, which reveals the close contact with life and suggests not infrequently the remonstrances of Thackeray. The latter, we know, had somewhat the French manner, and it may be that Mr. Belloc's French parentage on his father's side speaks in this way through him. In a word, he runs easily to farcical situations, helping out the wit of pure logic by a buoyant humor. So in the spirit of the higher criticism he edits one of his own works, recovered supposedly from oblivion in the thirtieth century. By an elaborate comedy, with Shakespeare as hero, he pictures deliciously the present-day attentions of publisher and society to rising authors. "My daughter tells me," writes one great lady, "how much she admired your play, 'Macduff,' and very much wants to see you."

A pretty feeling for nature runs through Mr. Belloc's work, with which fancy and philosophy pleasantly mingle. On this side he is Mr. Benson without his great seriousness. With a moving simplicity he makes no religion of nature, but accepts her joyfully where she meets him:

> If any man owned that valley, blessed be that man, but if no man owned it, and only God, then I could better understand the benediction which it imposed upon me, a chance wanderer, for something little less than an hour. . . . I was not so foolish as to attempt a prolongation of this blessedness: these things are not for possession: they are an earnest only of things which we may perhaps possess, but not while the business is on.

As will be seen, he is not a Romanticist, and indeed elsewhere comes out strongly for the classical standard of control, for the proportioned and reasoned sum of all human emotions. Nature of the country, town, or city takes its place in that general sweep of history and tradition which for him is the backbone of life.

Whether Mr. Belloc ever catches the public ear with the insistence of some others is not a matter of great moment—except, of course, to him. He is, at any rate, an interesting figure in English literary life; and, if he may be taken as typical of it, will serve to bring out the differences between such life there and here. Of American essayists who have the cleverness to win genuine popularity, to whom may we turn for anything like his combination of qualities? Smartness in this country is apt to carry with it that extreme commitment to modernity which loses touch with the lessons of the past.

WIVES OF LITERARY MEN.

Mrs. Andrew Lang has been writing about the "Trials of the Wife of a Literary Man." It is mostly that lady's social and public relations that are discussed. Doubtless the fireside companions of some of the irritable tribe of writers have their personal domestic tribulations, but the wife of Andrew Lang could scarcely have been one of these. Unless he was very different in his married life from what he was as the public and his friends saw him, he could not have been a man "gey ill to live with." Mrs. Lang does, indeed, speak as one who knows from experience when she refers to the duty of the wife of a literary celebrity to be a sort of "amateur Providence" to him, reminding him of his engagements, etc.; but this intimate side of the matter she passes over lightly. Her witty comments are expended upon other aspects of the life of a writer's wife, which she plainly believes to be not all beer and skittles.

It carries with it, to be sure, many social opportunities, but also how many social embarrassments, how many disconcerting situations, how many awkward moments! The wife receives an invitation, we will say, to spend a week-end at some great country-house with her husband. Instantly the feeling arises in her mind that she is asked merely as a necessary encumbrance. It is the genius who is really wanted, and his frump or bore of a wife is included only for the sake of politeness. She is as anxious as the Lady Clare to be loved for her own true worth, yet she has a horrid doubt lest she be graciously accepted only as the woman who cooks and sews for her husband, and who therefore has a claim upon his hosts. And the best rôle for her to attempt to play under such dubious and trying circumstances is a vexing puzzle. Shall she set up for a blue-stocking? Or shall she sardonically make herself out more of an ignoramus than even her entertainers believe her to be? Shall she smile sweetly and efface herself? Or shall she set out to be vivacious and take the lead in conversation? She has to consider not only other people, but her husband. His reputation is, in a way, in her keeping, and she also knows that his comfort and peace of mind may depend for the moment upon the way in which she conducts herself in general company. She may be very gayly and successfully assuming a part, when his reproachful eye will meet hers to make them both ill at ease.

One of the severest trials of the wife of a literary man must arise out of the foolish talk she is forced to hear about him. Some of this she overhears, all "unbeknownst," and can laugh to herself quietly about it. But in person she has to face the compliments, often left-handed, and the stupid remarks and silly questions which some people are forever pressing upon the wives of famous men. Don't you find it a wonderful privilege to live in daily companionship with such a towering intellect? How does he ever manage to discover such wonderful thoughts? Do you talk over the plots of his novels with him? Did he take that lovely character of Griselda partly from you? He surely has thousands of admirers. It must be great fun to read their letters. Do you ever let anybody come in to watch him while he is writing? Confronted by such impertinences and banalities, what is a woman married to a literary man to do? Probably her wisest course would be to imitate Mrs. Carlyle, who, when one of the servants asked her if "Master" was not the greatest man in England, replied: "We fondly hope so."

Mrs. Lang goes upon the supposition that the literary marriage she deals with is one of true minds. The wife is fitted to understand if not actually to help the husband in his chosen pursuits. But it is well known that there have been two views about the desirability of this. The matter was discussed by P. G. Hamerton, in that once popular book, "The Intellectual Life." He presented two alternatives to the literary man in search of a helpmeet. Let him either look for a wife of high intelligence, able to sympathize with him and encourage him and coöperate with him in his work, or for one who will know nothing whatever about his writing, and will stand apart from it and let him go his own way, giving, meanwhile, slave-like attention to his comfort. This last plan has had the practical commendation of some great names. Rousseau and his unaccountable Thérèse have been often mentioned in this centenary year. Not a few have been wholly unable to explain, except on the ground of the vagaries of genius, how Goethe—the man who wrote the letters to Frau von Stein—could have been content to live all those years with his unintelligent Christiane. Such a union as that of the Brownings would be voted by most people to be vastly nearer the ideal. But even in instances like that the wife's trials—of the kind Mrs. Lang refers to—would not be wholly absent. Possibly the literary man as husband also has his.

FRENCH NOTES.

Paris, November 1.

"Sources d'Idées au 16e siècle" (Plon), by Pierre Villey, is a small but useful, as well as original and authentic, study of the history of French thought. "If France in the sixteenth century was the scene of so profound a revolution, intellectual and moral, it was because new ideas came rushing in from every side and penetrated brains and upset them." This book is to show whence the ideas came. The author's competent acquaintance with that age has long since been recognized. Not the least sign of his keen insight is the use he has made of the translations which were channels to the flood tide of ideas. It is not scholars poring over foreign originals who can transform a nation's thought. Remy de Gourmont, one of our most notorious pursuers of ideas frivolous or profound, in the first series of his "Promenades littéraires," has shown how eighteenth-century translations from the English prepared French Romanticism in the nineteenth. In the sixteenth century of M. Villey, the new light came first from Italy, whose civilization was most advanced, and through Italy from classic antiquity.

Remy de Gourmont wickedly compares the enthusiasm with which that far-off time received the translation of

Ovid by Louis des Masures and of Anacreon by Remy Belleau with the heedlessness of all save specialists in our day, when the newly discovered "Athenian Republic" of Aristotle is translated, or the "Mimes" of Herondas or important fragments of Menander. We know it all beforehand, and the revelation dies with us, while we read our newspapers; but Ovid's luscious verse and the trifling songs of Anacreon cleared minds of mediæval and Reforming rhymes and prepared an avid public for the poets of the Pléiade, and, when the sonorous voice of Spain and Portugal of the Conquistadores was next heard, for Corneille, and so on, to Racine and a new classic century. It is, of course, the irruption of Greece and Rome into the modern world that has really counted. We are still all of us children of the Renaissance more than of the Reformation, which suspected it of Popery, or of the French Revolution, which flattered itself with rekindling the antique Republican flame. M. Villey keeps to his sixteenth century and France; but his book opens up new perspectives in history, where ideas have their epic story just as things have had their tragic tears.

Those who have the cult of Alexandre Dumas the elder are accustomed to attach a certain historical importance to the first volume of his "Mémoires," in which he narrates the heroic childhood and high feats of his father, first of the name. In the Place Malesherbes, Paris, between the monuments to the two Alexandres known to letters, there has now been placed the statue of this hero of arms. It revives certain memories to which the post-Revolutionary son was not alive, but which are not without an echo of edification from the old régime. It is known how this dynasty of supermen sprang from one of Louis the Fifteenth's somewhat dilapidated nobles. In 1760, Antoine Alexandre Davy, Marquis de la Pailleterie, sometime first gentleman to the Prince de Conti and colonel and commissary-general of artillery, sailed for San Domingo. There he married Marie Cessette Dumas, a mulatto woman, and began working a plantation of the west coast at La Guimodée, near Cape Rose. There was born to them, March 25, 1762, a son, Thomas Alexandre, the future general, the first Alexandre Dumas. The second Alexandre, a romancer accustomed to the vague language of Rousseau, describes this as a marriage "according to nature," on which an equally unprecise literary history has founded the tradition that the son of the decadent marquis was "natural" or illegitimate. Yet the French peerage, legally reconstituted after the Bourbon Restoration, and during the reign of Louis Philippe, steadily recognized the novelist himself as the legitimate inheritor of the title of Marquis de La Pailleterie. There was no reason in French law or creole prejudice why the marriage should not have been valid, and church influence which was powerful would have demanded it. Moreover, the plantation property seems to have come into the hands of the marquis through his wife, who was herself the legitimate heir of a French colonist married to a negress. The site of the property is still remembered in the island and there should somewhere be records to establish the truth without prejudice.

In 1780, after the death of his wife, the old marquis returned to France, and his quadroon son, Alexandre, mixed on equal terms with young courtiers like La Fayette, Lameth, Dillon, Lauzun. In his resounding duels with some of this gilded youth, no stain on his birth was thrown up to him; and the young noble whom he tossed from an equally noble lady's box at the opera into the pit had only pretended to mistake him for a lackey on account of his color. The terrible Marshal Richelieu, who was above eighty, insisted on serving in the ensuing duel as second to the son of the marquis to whom he had rendered a like service a half-century before. There was never any question of difference in rank. When the Revolution came, with its proscription of nobles, the young creole chose to serve in the armies under his mother's name; but his legal description under Napoleon and to his death in 1806 carried the name legitimately inherited from his father—General Alexandre Davy de La Pailleterie Dumas. Recent publication of documents of the time has cleared up his relations with Napoleon, who admired the son of thunder's exploits, but was unwilling to overlook his persistent ill-luck.

It cannot be said that research has not succeeded in lightening one of the heavy mysteries of modern history. The mystery is the fate of Louis XVII, the prisoner of the Temple. It has been lightened of the Naundorff incubus. Ernest Daudet, perhaps from his liking for Louis XVIII, of whom he knows more than any living historian, considers the death in the Temple certain. But it is also certain that the prisoner's sister, who was confined with him but kept strictly separated, did not think his survival impossible. And it is probable that Louis XVIII himself had no positive knowledge. Of all the many Pretenders, Naundorff was least likely as a lost Dauphin, and he has had the most lasting success. Round the claims transmitted to his descendants, there has grown up not only a vast literature, but something very like a speculative attempt to get at the Bourbon properties inherited by the ducal family of Parma. This went as far as the French Senate, which drew out a critical study of the case that should dictate the verdict of history—"La Pétition Naundorff au Sénat," by Georges de Manteyer. It is a wonderful work of patient, skilful research in obscure public records and unveils the real life of adventure and want and ambition of Naundorff. There still had to be explained his evident belief in his own stories (for they changed often). This has been undertaken as a case of pathological psychology by Doctors Sérieux and Capgras in "Le Messianisme d'un faux dauphin." A megalomaniac and mystic degenerate, he was obstinate in his belief that he was both Louis XVII and the Elect of God; and his folly was communicative. His wife, in her parallel hallucinations, saw five kings seated on thrones to deliberate about her husband. The facts of this medical consultation are historical, though the conclusions from them have not the weight of proof of Manteyer's study of records without hypothesis. S. D.

NEWS FOR BIBLIOPHILES.

A list of works illustrated by John Leech is highly needed; none of this draughtsman's bibliographers has presented an adequate summary of his book and magazine illustration, none avoided errors. I venture to offer some discoveries and corrections, made with reference to my own collection largely, which may be of service to the collector who still awaits a Douglas or a Reid for his Leech. Of the chronologies available in print the best is that of Mr. C. E. S. Chambers, which, published in 1892, the year following the appearance of Frith's Life, was designed to supplement that work. The lists compiled by Kitton, Dr. John Brown, Everitt and others, as well as the tables given in the Dictionary of National Biography and the British Museum Catalogue, yield to that of Chambers in respect both of fulness and of accuracy; and I shall use Chambers, therefore, as a working-text for the emendations which follow. I have taken no account of those books of which the publication in parts anticipates the year of publication as accepted, or of editions other than first which have not an individual aspect.

1835. On Leech's early work, information is scarce. His original essay in print appears to have been the "Etchings and Sketchings, by A. Pen, Esq.," published 1835. As lithograph this piece consorts with Leech's other efforts in this *genre* during the same year, of which Chambers cites the two series of individual colored plates published by W. Spooner, "Droll Doings" and "Funny Characters." Related with the Spooner sets, both in style and in general subject-matter, is the "Humorous Sketches," a set of plates published by W. Soffe, not catalogued by any bibliographer. These three series form an item of the late Harry E. Widener's library, so far as I have been able to learn the most complete set, of which Mr. Widener furnished me a syllabus shortly before his death. That a further series, to be called "Boarding School Exclamations," was projected by Leech appears from the subscription "Boarding School Exclamations No. 1," by the artist's hand, to the original sketch in my possession of Plate No. 19 of the "Funny

Characters" set, and some such series may exist in print. Another lithograph unlisted by bibliographers is "The Human Face Divine and De Vino," published by W. Spooner, (probably) in this year. These 1835 lithographs are, throughout, colored, although some are to be found in both states.

1840. "The Bachelor's Walk," Peter Styles, Gentleman (not mentioned in any bibliography).

1840. *Bentley's Miscellany.* A bibliography of Leech's work in *Bentley's* is wanting. This is more serious than in the case of most periodicals which Leech served, partly because of the extent of his work herein (1840-9, 1853-4), and partly because several of Leech's more important collaborators anticipated their first editions in the pages of this magazine. Thus, just as the first edition of "Oliver Twist" and the Cruikshank plates is antedated by the *Bentley Miscellany* issues, so Leech may be found before the first editions of "Ingoldsby," "Richard Savage," and "Mr. Ledbury." The following titles embrace the serial novels for which Leech executed drawings in *Bentley's:* "Stanley Thorn," Henry Cockton, VIII-IX; "Richard Savage," Charles Whitehead, X-XII; "Mr. Ledbury's Grand Tour" ("Mr. Ledbury's Adventures at Home and Abroad," "Adventures of Mr. Ledbury and His Friend Jack Johnson"), Albert Smith, XII-XIV; "The Fortunes of the Scattergood Family," Albert Smith, XV-XVI; "The Marchioness of Brinvilliers," Albert Smith, XVII-XVIII, "Brian O'Linn," W. H. Maxwell, XIX-XXI; "Aspen Court," Shirley Brooks, XXXIII-XXXV. Of individual pieces further which Leech illustrated for *Bentley's* there are not less than fifty-eight, including a story by J. Fenimore Cooper (XX, 429).

1840. "Comic English Grammar," Percival Leigh (ascribed to Gilbert à Beckett by F. G. Kitton, "John Leech: A Biographical Sketch," p. 64; by Graham Everitt, "English Caricaturists," p. 407).

1840. "The Ingoldsby Legends," Three Series, 1840, 1842, 1847. The first issue of the first series has p. 236 blank, and an appendix in verse follows p. 338. A quarto edition of "Ingoldsby" was published in 1864 with a new set of Leech's drawings on wood.

1840. Lithographic Cartoons, not in bibliographies: "Is this the General Post, Sir?" and "The Regicide Pot Boy," published by R. Tyas, June 13-20.

1840. *The London Magazine, Charivari,* and *Courrier des Dames.* Vol. II, No. 8, has a frontispiece signed: "Jack Leech done it."

1840. Parody on the Mulready Post-Office Envelope. This *jeu d'esprit* bears the Leech-bottle and the following text: "This design has (most respectfully of course), been submitted to Government by an aspiring Artist Mul—led—al—ready." There is a variant of the parody, without letters and differing in the minor figures.

1841. "Portraits of the Children of the Mobility," Percival Leigh. Eight plates, given as seven in Kitton.

1842. "Richard Savage," Charles Whitehead. Vol. III in some issues of the first edition has an extra plate, "Ludlow's Madness," facing p. 300, which is not carried in the index.

1843. "A Christmas Carol," Charles Dickens. First issue of first edition has green end papers and "Stave I," afterward "Stave One."

1843. "The Comic Album, a Book for Every Table" (Chambers, 1845). Contains plate signed "Leonardo da Vinci delt."

1843. "Jessie Phillips," Mrs. Trollope. Three-volume edition published in 1843 (not in bibliographies); one-volume edition 1844; each a first edition respectively.

1843. "The Wassail Bowl," Albert Smith (in Chambers ascribed to Douglas Jerrold).

1844. "The Comic Album, a Book for Every Table" (Vol. 1, 1843).

1844. "The Comic Arithmetic." There is much confusion over this little work. Kitton and Everitt list "The Comic Arithmetic" in their Leech Chronologies, and Dr. John Brown cites "The Comic *Cocker*" in his. Crowquill, not Leech, illustrated the book, which was republished under the latter name in 1850, together with "The Comic English Grammar" and "The Comic Eton Grammar" (originally "The Comic Latin") in one volume entitled "Paul Prendergast; or, the Comic Schoolmaster." Leech illustrated the English and Eton Grammars, parts i and iii of this work, and the Arithmetic has been ascribed to him not improbably because of its contiguity herewith.

1844. "The Comic Blackstone." Mr. A. W. à Beckett in "The à Becketts of *Punch,*" p. 82, records that Leech made one of the illustrations of this book by G. A. à Beckett. Contemporary advertisements accord the illustrations solely to Cruikshank.

1844. "Nursery Ditties," Mrs. Lullaby (not in the bibliographies).

1844. "Our Fido and His Adventures." Probably unpublished.

1845. "The Chimes," Charles Dickens. First edition in America, Lea and Blanchard, Philadelphia. Leech's woodcuts in text of the English edition appear as full-page illustrations. Title (by Maclise) lithographed, of English edition engraved.

1845. "The Fortunes of the Scattergood Family," Albert Smith. J. H. Slater, in "Early Editions," p. 264, collates incorrectly Leech's etchings as, in number, seven, six, and one respectively for the three volumes instead of six, six, and two.

1845-6. "The History of St. Giles and St. James," Douglas Jerrold. *Shilling Magazine,* Vols. I-IV. This novel with Leech's plates, not ascribed in Chambers, was republished in the collected works of Douglas Jerrold, 1863.

1846. "The Cricket on the Hearth," Charles Dickens. Omitted by Chambers and Kitton.

1846. "Mrs. Caudle's Curtain Lectures," Douglas Jerrold. Colored lithographs by Leech to the number of at least five supplement the book, although published separately.

1849. "Toil and Trial," Camilla Toulmin. *Railway Reading,* limp cloth, published together with "The Iron Rule" and "A Story of the West End," in one volume. (Contrast second edition, 1850, in which is substituted Mrs. Harvey's "Double Claim" for these companion pieces.)

1850, *circa.* "A Holiday Book for Christmas and the New Year" (not in bibliographies).

1852. "Comic Tales and Sketches," Albert Smith. A new edition, without date, embraces the same author's "Pictures of Life at Home and Abroad," originally published in 1853.

1852. "The Great Highway," S. W. Fullom. Second edition in one volume of the three-volume first edition in this the same year.

1852. "Picturesque Sketches of London, Past and Present," Thomas Miller (not in bibliographies).

1854. "Pictures of Life and Character," *Punch.* The correct dates of the five series are 1854, 1857, 1862, 1863, 1869.

1857-8. "Cyclopædia of Wit and Humor," William E. Burton, editor (not in the bibliographies).

1857. "Merry Pictures by the Comic Hands." Includes Leech's cuts in "The Comic Latin Grammar," printed with new titles.

1858. "Blaine's Encyclopædia of Rural Sports." An edition which incorporated the three-volume first edition in one volume was published in this the same year.

1859. "Nature and Human Nature," Thomas C. Haliburton.

"Wise Saws and Modern Instances," *do.* Neither of these Sam Slick items is to be found in the bibliographies.

1859. *Once a Week.* Leech's work appeared in the first five volumes, 1859-61 (Chambers, 1859-64).

1861. *Punch's Almanacs,* first series (not mentioned as an independent work).

1862. "Sketches in Oil." Catalogue of exhibit at the Auction Mart Gallery (not in the bibliographies).

1863. "Life and Times of Oliver Goldsmith," John Forster. Fourth edition of "Life and *Adventures,*" 1848.

1865. "Hunting." Twenty-one colored plates, 34x22, after oil sketches.

"Sports and Pastimes." Ten plates of the above. J. H. Slater catalogues the latter in "Illustrated Sporting Books," pp. 116, 191.

1872. "Exhibition of Outlines by the late John Leech" (not in the bibliographies).

1880. *Punch's Almanacs,* second series.

1886. "The Marchioness of Brinvilliers," Albert Smith. Reprint containing all the *Bentley* illustrations (Chambers, 1888).

1892. "A Little Tour in Ireland," S. Reynolds Hole. Large paper, limited edition; first edition 1859.

N. D. "The Path of Roses," Frederick Greenwood (not in bibliographies).

Further, of biographical and critical material, as well as of bibliographical, sources are available for a much more extended synopsis than any which has been printed. STANLEY KIDDER WILSON.

Correspondence

SENATOR HEYBURN, OF IDAHO.

TO THE EDITOR OF THE NATION:

SIR: Many Southern journals are severely criticising Senator Heyburn, of Idaho. One of Solon's laws for Greece was "not to speak ill of the dead." Why should we not prefer to remember the good and forget the evil in a person who may have erred in what he believed to be right? Senator Heyburn was born May 23, 1852, in Delaware County, Pa., and was thus only nine years of age when the South seceded. His parents were Quakers, a people whose religious principles are opposed to war for any cause. He was brought up in a school fanatically antagonistic to the institutions of the South, both political and religious.

With such surroundings, was it not natural that he should imbibe the principles and prejudices of his parents and people, which could have been eradicated from his mind only by his coming South and mingling with its people?

Senator Heyburn was a strong character, with a cultivated intellect, a ready and impressive debater, quick at repartee, with courage and confidence in his own ability. He was a foeman worthy of the steel of the most formidable antagonist on the floor of the Senate. Only such accomplished statesmen as Hon. John Sharp Williams, with the better cause to defend, could cope with him in debate. Evidently a close student, he was always prepared to argue on any question that came before the Senate, and was a smooth, impromptu speaker, who never faltered for the right word, and never revised anything in his speeches after they had been caught by the stenographers.

Let us excuse his one grievous fault—the error of his career in the Senate—that he was not great enough with all his gifts to overcome the prejudices engendered by the environment of his youth. These had crystallized in his breast a burning hatred to the Southern soldiers, which so blinded his judgment that he could not realize their worth after fifty years of loyalty to their oath of allegiance to the Government, which, with a strong arm, had crushed and destroyed their homes and laid their land desolate. Their fathers had left them a heritage in the past of statesmanship in peace and daring in battle (for the old flag which had never met a foreign foe without a blood offering for Old Glory), yet Senator Heyburn could not welcome his brother of the South to a seat in our father's house, the Capitol of our nation.

Is it not better to be charitable to the dead who can no longer defend their character? I prefer to remember the man who had the manliness to come forward and offer me his hand as a token of friendship after I had replied in the way that cut him deepest to his tirade of abuse against the Confederacy, and to his imputation on the character of our best beloved chief, Gen. Robert E. Lee.

I would in a spirit of love for frail humanity plant a flower on Senator Heyburn's grave that should fill the atmosphere with a fragrance of sweetest love, that should dispel every odor of hate from his memory. *Requiescat in pace.* James Gordon,

Ex.-U. S. Senator for Mississippi.

Okolona, Miss., November 5.

THE RESTRICTION OF IMMIGRATION.

To the Editor of The Nation:

Sir: There are several samples of incorrect reasoning in your editorial on "Metaphysical Standards of Living" (*Nation*, November 7). To take a single example, you say: "The non-metaphysical mind insists on asking, Where has the American workingman vanished to? Evidently, he must have vanished either up or down." This sounds like a sample of what Burke called "the smartness of debate." A thing may vanish by becoming non-existent.

But what is to be gained by such quibbles? Why not face the issue squarely, and take sides definitely upon it? There are two questions upon which the issue of restricting immigration depends. The first is, Would the restriction of immigration make unskilled labor scarcer and harder to find, or would it not? The second is, Is it, or is it not, desirable that unskilled labor should be scarcer and harder to find than it now is?

As to the first question, there is not likely to be much difference of opinion. The opponents of restriction generally use as one of their arguments the need of more unskilled labor. That indicates pretty clearly their belief that restriction would interfere with the supplying of that need; that is, that it would make unskilled labor scarcer and harder to find. As to the second question, there is likely to be a difference of opinion. Opponents of restriction doubtless think it undesirable that labor should be scarcer and harder to find. As a restrictionist, I, for one, wish to say clearly and emphatically that I think it desirable that unskilled labor should be very much scarcer and harder to find. I realize, of course, that this means a certain curtailment of production, and a retardation of the rate of increase in national wealth. But I think that the advantages would outweigh the disadvantages.

So long as labor of any kind is abundant and easy to find, so long will the laborers have to hunt for work, and take what is offered. Being unable to choose their jobs, they will have to work under dangerous and unsatisfactory conditions. Then we shall be wasting our time on such palliation as factory inspection and a thousand and one other schemes for protecting the laborer. When labor is scarce and hard to find, then the laborer can choose his job, and the employer will, without legal compulsion, see that conditions are made attractive, and we shall be rid of most of this flood of "social" legislation. The writer is, further, of the opinion that a state of society where the employer has only to hang out a sign, "Man Wanted," and wait for men to apply, in order that he may choose, is less desirable, on the whole, than a state where the laborer has only to hang out a sign, "Job Wanted," and wait for jobs to come in order that he may choose the one he likes best. Under the first condition, the term wage-slavery has a meaning sufficiently near the truth to make revolutionists. Under the second state, no one could use such a term with a straight face. T. N. Carver.

Cambridge, Mass., November 8.

HONOR AMONG ARTISTS.

To the Editor of The Nation:

Sir: It would be well if something analogous to pure food laws could be brought to bear upon artists. There is altogether too much shoddy work issued over the signatures of artists who have had higher standards and fairer ideals. The chief offenders in this respect seem to have chosen the covers of popular magazines as their peculiar field. The perpetrators of these covers may be the first, I fear, to cry, "By what standards shall our art be judged, and who, pray, are to be the critics?" That difficulty is not insurmountable, as is shown by the work of such illustrators as Maxfield Parrish, J. C. Leyendecker, A. I. Keller, and Howard Pyle, which is often excellent and which offers a convenient standard.

The progress of the modern illustrator is often as follows: He works hard and conscientiously, persevering, in spite of obstacles and rebuffs, until his work is recognized as possessing good qualities, and then the publishers are ready to exploit it. They flood the market with widely advertised reproductions of his drawings. The demand is then established. Too frequently a year will mark a decided change in the quality of the work. The "characteristic" elements of the drawings increase, but the excellencies fade away and are gone. We are surfeited with the mawkishly sentimental and sickly sweet productions of men who have done first-class work and would still do it if a healthful stimulus were applied by the publishers. C. F. Kelley.

University of Illinois, November 14.

THE LOEB LIBRARY.

To the Editor of The Nation:

Sir: Ever since I heard of the project of the Loeb Library, I have eagerly and impatiently looked forward to its issue. My disappointment has been proportionately keen in finding the English version of Euripides to be in verse.

Surely, the library is intended for the lover of literature, who, though a decent classical scholar, has not sufficient learning or sufficient time to read Greek and Latin unaided, and its purpose must be to enable him to get a first-hand knowledge of the classics without recourse to grammar and lexicon. To serve this purpose, what is needed is a sufficiently literal, yet idiomatic, prose translation, written in smooth, harmonious, but unmetrical English. I mean such a translation as is found in the Dante of the Temple Classics. I look upon the text of the "Inferno" and the "Purgatorio" in those little volumes (the translation of the "Paradiso" leaves much to be desired) as models of what such a bi-lingual edition should be.

Surely, none of the arguments have place here which are pertinent to verse translations of classical authors unaccompanied by the original text. If the reader of the poets of the Loeb Library has not sufficient knowledge of Latin and Greek to get the rhythm, the verse quality, of his author, this edition is not for him; it can serve only a shallow pretence of learning. There are plenty of good verse translations ready to his need. If, on the other hand, the reader can get the metrical value in the original, he cannot afford the inevitable loss in closeness of rendering entailed by a translation in verse.

There is the further consideration of the continual jar which must follow the transition from great poetry to fairly good verse.

If there are others who feel as I do, I wish that they would join with me in deprecating the use of verse translations in any of the volumes to come.

Elizabeth Knight Tompkins.

New York, November 9.

To the Editor of The Nation:

Sir: Every lover of literature will join in the welcome given in your editorial of November 7 to the Loeb Classical Library, but surely it may be permitted to express a regret that the volumes are so unattractively printed. The paper is sometimes imperfectly opaque, and the type is not attractive. Certainly there is no excuse for using such a poor fount of Roman letters, and even for the Greek letters there are beautiful founts, such as the one designed by Mr. Selwyn Image, the use of which might perhaps have been obtained for publications so disinterested in purpose. As presumably one of the objects of this series is to attract readers, and as one of the most important lessons to be learned from the ancient civilizations is that the smallest details of life may be artistically ordered, this failure to print the books beautifully must be considered a great opportunity wasted. FRANK WRIGHT.

Cambridge, Mass., November 10.

Literature

CHANNING'S HISTORY.

A History of the United States. By Edward Channing. Vol. III: The American Revolution, 1761-1789. New York: The Macmillan Co. $2.50 net.

The third volume of Professor Channing's great undertaking, which for two years past the publishers have been announcing as "forthcoming," has at last arrived. If there is any reproach in this "at last," it is not intended for the author. In an age of specialists, when, as Leslie Stephen says, an event takes longer to describe than to occur, one can but admire the courage of any historian who proposes single-handed, and hampered by the scholar's conscience, to write a comprehensive history covering the last four centuries. Every page of Professor Channing's book bears witness that he has the scholar's conscience. It is true he does not profess to have "exhausted" the sources. He frankly confesses that it is impossible for one man to master "even a tithe of this material." But he has mastered a good part of it. In respect to the printed sources, his scholarship is eminently sound and discriminating. How sound and discriminating it is, one does not perhaps perceive at first, carried along by the easy narrative, by a certain charm in the style, so direct and lucid, so unlabored, so pliantly responsible to the exact pressure of the thought it is designed to convey. But in the end, aware that all this ease and precision comes of much information well meditated, one is inclined to marvel at the rapidity with which Professor Channing proceeds with his task.

The Revolution has most often been regarded as nothing more than a contest for home rule which ended in rebellion and independence. Historians have aimed to exhibit the causes of this contest, to estimate the justice or the expediency of the British policy on the one side, the justice or the necessity of colonial resistance on the other, to explain how it was that attempts at conciliation failed, and how, in the resort to arms, the colonists were able to succeed against so formidable an enemy. Until recently, American writers have not sympathized with or very well understood the imperial interests which determined British policy. They have accordingly been rather partial to the revolutionists. English writers until recently have not understood imperial interests very well, either, but they have said what they could for British policy, and have been willing enough to discount the value of patriot rhetoric. But during the last twenty years a good deal of material which throws new light on imperial interests has been exploited by both American and English scholars, while at the same time the shifting of international alliances has contributed to establish more friendly relations between the people of the two countries. The result is that American historians have become so keen to understand the old colonial system as a whole, and English historians have become so generous in their estimates of our heroic age, that it is no longer possible to determine the conclusions of a writer on the Revolution by his nationality; and, in fact, one can now get good Whig doctrine, and occasionally a little refined and acceptable Whig *blague*, from Sir George Otto Trevelyan, while most excellent Tory sarcasms are to be had in abundance from Mr. Sidney George Fisher.

Professor Channing seems not to have been greatly impressed by this exchange of amenities. He is a Whig still, with an occasional sarcasm, but without any *blague* at all. As he tells it, the story of the Revolution is wonderfully free from inaccuracies and exaggerations of the sort to which American writers were once prone. In presenting the arguments used by the colonists to justify resistance, he gives them fairly and for what they are worth, but he gives the arguments on the other side, too. The famous theory about taxation and representation is carefully analyzed, and we learn how it was understood in England as well as how it was understood in the colonies. That the colonists systematically evaded the acts of trade and navigation is not glossed over. The measures of Grenville are not interpreted as embodying a brand-new policy designed to enslave the colonists, but only as an effort, for the most part, to make the old policy effective: to say that the measures of Townshend "re-established the colonial system" is to hit the mark admirably. The "Massacre" is dispatched in a few lines; the worthless story of Almon about the "political trick" concealed in the tea legislation is not repeated; the Quebec act is interpreted as the sequel of the Proclamation of 1763 rather than as a part of the coercive measures of 1774. Many examples might be given to illustrate Professor Channing's freedom from anti-British prejudice. On the other hand, he has not been seduced by a certain prevailing fashion to regard the Revolution as a tawdry affair staged by smugglers and justified by cheap rhetoric. For example, he understands the principles of the Declaration, and in a few sentences he defines these principles, as they were understood in the eighteenth century; and so understood, it may be said in passing, they have not even yet lost all significance.

Freed from exaggeration and prejudice as the story certainly is, it is still, in its essential meaning, the story with which we are familiar. "Commercialism, the desire for advantage and profit in trade and industry, was at the bottom of the struggle between England and America; the immutable principles of human association were brought forward to justify resistance to British selfishness." This is the thesis. In the main it is defensible. But attributing "selfishness" to the British alone leaves one with the impression that only the British were selfish; that it was right for the colonists to seek advantage and profit in trade, but wrong for Englishmen to do so. And the narrative as a whole does not remove this impression; the colonists, we are led to suppose, were united in meeting an unjust attempt at exploitation by legitimate resistance, and so won independence. And they won it, apparently, because they were justified: "The modern American student sees in the third George no mere tyrant, no misguided monarch, but an instrument of a benign providence bringing, through pain and misery, benefit to the human race." It is doubtless comforting to feel that one's own country has been set down in the heavenly decrees as a most favored nation. Still, it is possible to believe that if a benign providence had made the third George as intelligent as it made him honest, some of the pain and misery might have been avoided, without prejudice to the human race. Perhaps this point of view might have appealed more strongly to Professor Channing if he had regarded the struggle for home rule as a conflict between diverging interests, selfish or not as one likes to suppose, but surely as selfish on the one side as on the other; and one is apt to think that he would have so regarded it if he had understood the needs and institutions of the British Empire as sympathetically as he has understood the needs and institutions of the thirteen colonies.

The desire of the colonists for home rule, Professor Channing understands very well. But there is another aspect of the Revolution, not so important, perhaps, as the contest for home rule, but still very important, which he seems not to understand at all, or at least not to have made much of. This may be called the class conflict within the colonies themselves. By the middle of the century there existed in nearly every colony a little aristocracy, based principally on wealth, a group of closely related families, aping the English gentry, getting their clothes cut in London, and having, on their walls, oil portraits of their great grand-parents, whose Christian names they knew. These families, familiar with the Governor, intrenched in the Council, controlling the Assembly through their "interests," much as the English aristocracy controlled the House of Commons, dominated colonial politics and society. Hanging to the skirts of these people were many others, well-to-do, seeking recognition, and getting as much of it as they were worth. But altogether outside of this aristocracy and its hangers-on there was another class, already formed and rapidly increasing in numbers, with different interests and ideals—small farmers in the back-country, which was being rapidly settled by German and Scotch-Irish immigrants, unfranchised artisans and workmen in the cities, debtors, ambitious young lawyers with a talent for harangue, dissenting ministers whose Princetonian Presbyterianism had been touched by the latter-day spirit of Geneva. By 1760 the conflict among these classes for control of the colonial governments had already begun: it was the conflict between "East" and "West," between franchised and unfranchised, rich and poor, between common-weal and special privilege, which, in one form or another, has characterized American history ever since.

Now, inasmuch as Professor Channing makes little or nothing of this aspect of the period, the conflict with England appears, in his narrative, much simpler than it really was. He says that the colonists were united in desiring home rule; and that is essentially true. But, then, what is the meaning of the opposition of tide-water to upland in Virginia, of Quaker to German in Pennsylvania, of merchants to mechanics in New York? What is the significance of the bitter struggle between radical and conservative for control of committees and congresses? Why did some people —Professor Channing mentions one of them, "Edmund Pendleton, who was naturally a conservative"—wish to nullify the Stamp Act by not carrying on any business which necessitated the use of stamps, while others wished to nullify it by carrying on business precisely as if no Stamp Act had been passed? Was it indeed merely a difference of temperament, a polite disagreement over the method of resistance? The truth is that the conservative class, which included those who later became loyalists, was between two fires; it feared the rising democratic spirit in the colonies almost as much as it feared the encroachments of the English Government. It sought therefore to control the movement for home rule, and so to conduct it as to maintain its privileges against British interference without extending them to the unfranchised classes in the colonies. It was difficult to do this. The mob was very useful in nullifying a Stamp Act; but it was difficult for the conservatives, having grown eloquent about the rights of man in their petitions to the King, to explain the rights of property to their brothers at home. The dilemma of the conservatives was the opportunity of the radicals—all those, that is to say, who had little to lose and much to gain. The radicals desired something more than home rule for the rich and the well-born; they therefore used the home-rule issue to break the power of the colonial aristocracy.

And this opposition of interests and ideals, which entered into and complicated the question of home rule, became the very substance of American history after the war was over. But Professor Channing's neglect of this aspect of the Revolution makes his treatment of the period from 1783 to 1789, excellent as it is in many ways, somewhat unsatisfactory from the point of view of origins; just how the issues of these years—the formation of parties, the financial troubles, social insurrections, the establishment of a new Constitution—grew out of the class conflicts of the earlier period, is not made quite clear. From 1760 to 1830 the persistent issue in our history was the conflict of democratic and aristocratic interests and ideals. Perhaps this was the primary issue even in the Revolution; it certainly was in 1789 and in 1828. The Radicals won much in the Revolution; they lost a good deal in 1789, and won something in 1800; but when Andrew Jackson, the backwoodsman of Scotch-Irish descent who could fight better than he could spell, broke the power of the Virginia dynasty and destroyed the United States Bank, then for the first time the frontier democracy came into its own.

CURRENT FICTION.

Cease Firing. By Mary Johnston. Boston: Houghton Mifflin Co.

Miss Johnston here carries on her story of the Civil War from the point at which "The Long Roll" left it. Many of the same figures appear. Richard Cleave, who was under a cloud when we parted with him at the end of the earlier narrative, is here restored and glorified in due course. Judith Cary and the title of General are not too good for him. Maury Stafford, the villain, gets his deserts also. But this straightening out of the Cleave affair is incidental. Another young pair take the centre of the scene for romantic interest. Judith Cary, it will be recalled, has a brother Edward. Serving as a private in the Confederate army, he finds his Désirée on a Louisiana plantation. Her father and brothers are with the army, and she is left in charge of the great estate and a hundred slaves. It is night. The river is rising. Already there is a break in the levee. By the light of a blazing tar-barrel, beautiful Désirée is superintending the work of reconstruction: if the levee gives way the whole plantation will be ruined:

> She was standing high, beneath her heaped logs, behind her the night. She had clasped around her throat a soldier's cloak. The wind raised it, blew it outward, the crimson lining gleaming in the torchlight. All the red light beat upon her, upon the blowing hair, upon the deep eyes and parted lips, the outstretched arm and pointing hand, the dress of some bronze and clinging stuff, the bent knee, the foot raised upon a log higher than its fellows. The out-flung and lifted cloak had the seeming of the floating drapery in some great canvas, billowing mantle of heroine, saint, or genius.

She *is* a heroine, and this is evidently the nick of time for the hero to appear. He did. Edward Cary, separated from his regiment, happened on the scene—"saw her and loved her." Miss Johnston is in the habit of making rather more use of the long arm of coincidence than a writer of narrative needs. Fate parts the lovers, but arranges Edward's return to the plantation at the very moment when the sapping of the river brings about the total collapse of the mansion which, he supposes, holds Désirée. In the end, when Désirée (having been murdered by some drunken Yankee soldiers) is on the point of death, fate brings Edward, himself mortally wounded, to her side. In all this business of "heart interest" Miss Johnston follows the broad romantic tradition—is still the Miss Johnston of "Audrey" and "To Have and to Hold." Her style is inflated, and there is little or no natural dialogue in her pages. The speech of her people is bookish, strained, often hysterical. Such merit as these pictures of the Civil War have is the merit of brilliantly colored panorama. Gen. Lee is the central figure in this stretch of canvas, as Gen. Jackson was in the earlier.

The Collectors: Being Cases Mostly Under the Ninth and Tenth Commandments. By Frank Jewett Mather, jr. New York: Henry Holt & Co.

If the owner of this prettily made book will turn to page 49, he will find this sentiment: "I confessed my innermost ambition, the creation of a criticism learned and judicial in substance, but impressionistic in form." The words are from the mouth of the imaginary reciter of one of the stories in the book, but no reader of Mr. Mather's signed articles in the Art section of the *Nation* need be told how precisely they express the spirit and style of his own critical writing in that field. Now we have the same play of learning and fancy applied to fiction, with results that are as novel as they are entertaining. Each of the stories has some bit of strange art lore as its theme—the forgery of Corots in New York by a starving artist who is half-visionary and half-charlatan; the cherishing of a false Giorgione by a great art critic and the strange appearance of the picture in a Spanish castle; the tangle of a German professor's mind between love and Lombard runes; the temptation and fall of a collector who is poor and married; the intrusion of a coveted Crevelli between the union of two rare hearts; the rivalry of two friends over deep-buried pots of Italian lustre; the selling of a forged coronal. But withal, the author's knowledge of art and deep initiation into all the intricate ways of collector and dealer are kept subordinate to the story. In that elusive region of the soul where æsthetic sense and moral feeling merge together he has discovered a fascinating field for analysis and sympathy which, as it appears in these tales, has scarcely been touched before in fiction.

The style of the book verges sufficiently towards the "precious" to suit the subtlety of the theme, yet without falling into artificiality or effeminacy. Only once or twice an annoying solecism has crept in which could well have been avoided.

The Long Portage. By Harold Bindloss. New York: Frederick A. Stokes Co.

This is in substance much like Mr. Bindloss's earlier stories. It deals, that is, with the illumining experience of the conventional Briton in the unfamiliar Northwest. We do not say the unconventional Northwest, because it is perfectly clear that the wilderness, the rough life of the frontier, is as strictly ruled by conventions as the smoothest of English country-house existences. It is as purely a matter of obligation that one should starve and freeze and toil painfully for small immediate rewards in the one field of activity, as that one should stuff, and bask, and idle to one's heart's content and soul's disease in the other.

The hero in this instance is a Canadian of the second generation, who, brought up to the rigors of frontier life, has finally "made his pile" as a miner. He visits England for the first time on a quest undertaken to vindicate the memory of a fellow-frontiersman. A villain is involved in the person of a country gentleman, and a heroine in the person of the young lady of the old school whom that country gentleman designs to marry. He is really guilty of the dishonor which he has foisted upon our hero's dead friend. The story culminates in a sensational gathering of all the persons chiefly concerned on that far Northern portage, the scene of the reputed crime—which is not really a crime at all. The heroine, who loves the hero, there contrives to find cause for engaging herself to marry the villain. But it is the easiest matter in the world for his creator to rid us of him by drowning him at the moment when he is caught trying to conceal the evidences of his guilt, such as it is. And, of course, that makes everything pleasant for everybody concerned, and fits the heroine of the old school to become the happy bride of the hero of the new.

Azalea. By Elia W. Peattie. Chicago: The Reilly & Britton Co.

This is a charming little story of a girl in the Blue Ridge Mountains. It is for youth, and it stands the only true test of such reading. The elders will like it. Mrs. Peattie writes with authority of the wild Carolinas. She paints lovingly the beautiful scenery, understandingly the mountaineers, whether they are the simple, pious folk who farm their acres or the moonshiners who may defy the Government, yet have hearts for their fellow-beings. In telling the tale of a child saved, but so as by fire, from the hard life of a travelling show, she contrives to picture vividly the region, its landscape, figures, and atmosphere. Sombre, even tragic, episodes are introduced, but none which is unwholesome. The air is that of the mountains whence cometh help.

THE CLASSICS.

Loeb Classical Library. Edited by T. E. Page and W. H. D. Rouse. Ten volumes. New York: The Macmillan Co. $1.50 net each.

It is proper to say at once that this first instalment of the Loeb Library promises well in a general way for an undertaking which is magnificent in conception and which may, if carried to the end, accomplish a great work. The design, as is well known by this time, is to print the whole body of classical and early Christian literature, Greek and Latin, with an English translation on opposite pages. It appears from the volumes now before us that a few textual notes will be given and occasionally an explanatory note; the latter office, however, is chiefly performed by full indexes, and for these every reader will be highly grateful. Brief, but sufficient, biographical and bibliographical introductions are added. The scheme of the editing is excellent; the needs and taste of the gentleman scholar have been well considered and adequately provided for. And the books are superb cribs! But the fact cannot be overlooked that the physical make-up is not entirely satisfactory. In the Latin volumes before us the page is fairly good, the paper opaque and the type clear; but four of the five Greek volumes are printed on paper so thin that the type shows through in a manner distressing to the eyes. At any cost to the purchaser, the Greek authors in the future should have fewer pages to the volume, and, as a consequence, thicker paper. The size will, we think, meet with general approval. These are real books, but they are still small enough to be conveniently carried about. One could wish that the binding were a bit less flimsy.

We have dwelt at some length on these physical qualities, because they are really, in a publication of this kind, of the first importance. The books are not intended primarily for professional students of Greek and Latin, and for other readers a clearly printed page will probably mean more than a perfectly accurate text and translation—though these things, too, are desirable.

The ten volumes now issued include Terence (2 vols.), Propertius (1 vol.), St. Augustine's "Confessions" (2 vols.), Euripides (2 vols., to be complete in four), The Apostolic Fathers (1 vol., to be complete in two), Philostratus's "Life of Apollonius of Tyana" (2 vols.); and ten more volumes are promised for December. For the St. Augustine, the editor, Dr. Rouse, has wisely made a reprint of Watts's translation of 1631, with various corrections; the result is excellent. The prose version of Terence, by J. Sargeaunt, of Westminster School, has caught the spirit of the original capitally; it is in idiomatic English, yet follows the Latin close enough to serve as lexicon and phrase book. In reading through one of the plays we have been particularly struck by the translator's skill in conveying the sense of plainly spoken passages without offence to modern taste. Quite as good is Prof. H. E. Butler's prose rendering of Propertius. We are tempted to copy out a few lines of the *Qualis Thesea,* to show his skill in dealing with what is perhaps the sweetest love-poem in the Latin tongue:

> Hanc ego, nondum etiam sensus deperditus omnes,
>   Molliter impresso conor adire toro;
> Et quamvis duplici correptum ardore iuberent
>   Hac Amor hac Liber, durus uterque deus,
> Subiecto leviter positam temptare lacerto
>   Osculaque admota sumere avara manu,
> Non tamen ausus eram dominæ turbare quietem,
>   Expertæ metuens iurgia sævitiæ;
> Sed sic intentis hærebam fixus ocellis,
>   Argus ut ignotis cornibus Inachidos.

Not yet were all my senses drowned, and I strove to approach her where she lay, and lightly pressed against her couch. And although a twofold frenzy had laid hold upon me, and the two inexorable gods of wine and love urged on this side and on that, with gentle touch I tried to pass mine

> arm about her where she lay, and with outstretched hand take passionate toll of kisses; yet I had not dared to break in upon my mistress's rest (for I feared the bitter chidings of that cruel tongue, so oft endured by me), but fixed my gaze upon her with tireless eyes, even as Argus glared on the strange hornèd brow of the daughter of Inachus.

This is all good, but the touch in rendering the difficult phrase *oscula . . . manu* is finer than would be expected.

Of the Greek volumes we must speak briefly. Prof. Kirsopp Lake's work on the Apostolic Fathers has been something more than translation. The difficult problems of text and authorship have been treated briefly but authoritatively. F. C. Conybeare's version of the "Apollonius" follows the windings of Philostratus's style with great cleverness and with exquisite knowledge of Hellenic Greek. We think that a fuller system of punctuation in the Greek text would have made it less fatiguing to read, and we have noted several misprints. The letters of Apollonius and the diatribe of Eusebius are added. The Euripides reproduces the verse translation of A. S. Way, with some revision bringing it to conform more closely with the original. Mr. Way's version is in itself good, but we are convinced that for the purpose of this edition a prose rendering is more desirable.

The Provincial American and Other Papers. By Meredith Nicholson. Boston: Houghton Mifflin Co. $1.25 net.

Those who inhabit the great wilderness west of the Alleghany Mountains will find a good word of cheer in Mr. Nicholson's essays. On the other hand, certain readers of the *Atlantic Monthly*—to which most of the papers were originally contributed—must have learned with a shock of surprise that one can exist and even be happy far from the refinement and luxury that characterize society in the older commonwealths, such as Vermont, New Hampshire, and Maine. Of course, to men who take their daily walk by Boston Frog Pond or down the Great White Way, it will always seem a strange and a terrible thing to live in Indiana. In the mushroom towns of the Middle West one must dispense, to be sure, with many of those features of a riper civilization which constitute the charm of New England villages. While the cousin on the Atlantic Coast revels in the roads that his great-great-grandfather made, in his one-horse shay, in his wood stoves, dug wells, and kerosene lamps, the Western provincial must put up with the drawbacks of a new country—with paved streets, motor cars, hot-water heat, city water, and electric lights. Yet the buoyant choragus of the Indiana school raises no complaint against the destiny which has cast his lot in the midst of the vast plain that extends in unbroken solemnity to the foot of the Rockies. He intimates that, while Columbia is rearing her foundlings in the metropolis, it is in the giant cradle ribbed by two mountain ranges that she is rocking the genuine children of the republic.

In his wide neighborhood one does not restrict one's acquaintances to the Sons and Daughters of the American Revolution. One is bred in the tolerant catholic spirit of the American nation, and cannot understand why all the protestant Smiths should not unite in one grand institutional church. One takes a broad outlook and nourishes great designs, brags with his fellow citizens in public, and in private laughs at them and at himself, boasts that he leads the world, and pats himself on the back when he has improved the methods of skimming milk or invented a more rapid buttonhook. Nor is the felicity of the provincial grounded solely upon his material triumphs. Even in Indiana there are memories and traditions; there are exclusive literary clubs and men who take their cue from Matthew Arnold; there is political uplift and poetical progress; there are the bones of heroes and *lacrimæ rerum;* there are imperishable footprints of Eggleston and Lew Wallace, of Benjamin Harrison and Hendricks, of James Whitcomb Riley and Booth Tarkington and George Ade. Why should an Indiana novelist cry out on the strumpet Fortune? Even in Indiana one may construct castles of card-board, and people them with marionettes, and become a "best-seller," and be translated into French, Italian, German, Danish, Swedish, and Norwegian. Who would not wish to be a provincial?

Tramps through Tyrol: Life, Sport, and Legend. By Frederick Wolcott Stoddard. Boston: Little, Brown & Co. $2.50 net.

Gates of the Dolomites. By L. Marion Davidson. New York: John Lane Co. $1.50 net.

The growing interest in the Dolomite region is reflected in the two volumes before us. Mr. Stoddard's account, while covering the whole of Tyrol, is devoted very largely to those unique peaks which affect the beholder as no other mountains do. In his words,

> the Dolomites amaze and enthrall. They are totally unlike any mountains one has seen before, or will ever see again. No two dolomites resemble each other, and it is impossible to describe, intelligently, their infinite variety of form and color. Towers, battlements, obelisks, pinnacles, and the ruined masonry of ancient castles and fortresses appear to surmount the sheer walls, with their fissures and cañons, which rise at times several thousand feet high. Varying lights produce strange transformation scenes among the Dolomites; the ravine becomes a pinnacle, and the battlement melts into a rocky chasm.

His descriptions of the picturesque valleys enclosed by these wonderful peaks are as attractive as his illustrations, and he has caught the peculiar charm which impresses towns like Bozen and Cortina upon the memory of the traveller. Any one who has looked upon the statue of Walther von der Vogelweide, on the principal square of Bozen, and has seen the Dolomites from the incomparable Erzherzog-Heinrich promenade in Gries (Bozen's suburb) must have felt that Switzerland offers no similar combination of scenic beauty, poetic charm, and, let us add, physical comfort in walking. Only in Austria can you find rose-embowered paths, which zigzag so gently up mountain slopes a thousand feet in height as to give one a sense of walking on the level. Mr. Stoddard has an equally keen eye for the wilder aspects of Tyrolese landscape, whose dangers hold no terrors for him, and he depicts throughout the land and its people with a skilful pen. His account of the Dolomites is a welcome addition to the literature of a region which, first disclosed in 1864 by Gilbert and Churchill, and since made better known by Amelia B. Edwards—among many others—has not yet been sufficiently explored by the Alpine tourist.

Mr. Stoddard's plea for the pronunciation in English of "Tyrōl" with the German o, in place of the uneuphonious "Tyr-ol," is well worth heeding, and he ought to be universally followed in his omission of "the" before the name of the country. It is to be regretted, however, that even he occasionally adds to the prevailing confusion due to speaking of "the Austrian Tyrol," by referring to "Italian Tyrol" (p. 194) instead of Trentino. Generally accurate as the book is, it is not free from minor mistakes. "Amras" for Ambras occurs repeatedly, as does "Krona" for Krone. "Field-Marshal Baron von Pidoll," referred to in the preface, is only a "Feldmarschall-Lieutenant" (there is no field-marshal in the Austrian army), nor are there "Grand Dukes" in Austria, while, on the other hand, there *are* barons in the ranks of the aristocracy, the contrary apparently being implied in the statement on page 22. The admirable map in Mr. Stoddard's volume deserves a special word of praise.

Miss Davidson's book is a minute, chatty, and very useful account of the various approaches to the Dolomites, but the story of her wanderings lacks literary skill, and the proof-reading is so defective as to interfere seriously with one's enjoyment of her glowing accounts of what she has seen. So much enthusiasm for the majestic Grossglockner seems incongruous with the constant misspelling of its name, alternately as

"Grosse Glockner" and "Gross Glöckner," and there are scores of such blemishes as "Salzbourg," "Innsbrück," and "Harpinger" (for Haspinger). The illustrations are inferior to those in Mr. Stoddard's book, but the best of all these reproductions of mountain scenery and village life do not equal in naturalness and simple charm the old-fashioned wood-cuts in such works as "Die österreichisch-ungarische Monarchie in Wort und Bild" (Volume "Tirol und Vorarlberg").

Spenser's Shepherd's Calendar in Relation to Contemporary Affairs. By James Jackson Higginson. Columbia University Studies in English and Comparative Literature. New York: Lemcke & Buechner. $1.50.

The present volume embodies the most searching analysis that has yet been made of the various problems which are raised by Spenser's poem, and if the results are more largely negative than the author is willing to admit, this is due to the meagreness of the data rather than to any want of industry or acumen on his part. The book, however, is marred by the writer's singular ignorance of a fact of capital importance in the poet's life during the period under consideration—namely, that he was in 1578 private secretary to John Young, Bishop of Rochester. We should have thought that all Spenserian students were familiar with the most important finds of our generation relating to the poet—those which were described by Dr. Israel Gollancz in a paper read before the British Academy on November 29, 1907. One of these finds was Spenser's own copy of the "Faerie Queene" containing, among other things in the author's handwriting, an early draft of the first sonnet in the "Amoretti"; the other was a collection of books of travel bound together which formerly belonged to Gabriel Harvey, one item in the collection, "The Traveiler of Ierome Turler," bearing on its title-page in Harvey's handwriting the following statement: *Ex dono Edmundij Spenserij, Episcopi Roffensis Secretarij, 1578.* Before this simple fact the whole elaborate structure of Mr. Higginson's interpretation of the tale of the Shepherd Roffy or Roffynn, his dog Lowder, and the Wolf, in the September eclogue virtually crumbles to pieces. The discovery makes it plain that Grosart was right in identifying the shepherd with Young, Bishop of Rochester, who had previously been Master of Pembroke Hall (Spenser's own college) at Cambridge. The key to this obscure allegory then must be sought in Young's life and not in Lord North's attempted spoliation of Bishop Cox.

Ignorance of the above-mentioned phase of Spenser's career again vitiates to a considerable extent the author's discussion of the poet's biography during the years 1576-1580, for this discussion is based on the assumption that Spenser remained in the vicinity of Cambridge from the time that he left the University until he made the acquaintance of Sidney or Leicester. Still further, Spenser's relations to Young have a direct bearing on Mr. Higginson's theory in regard to the poet's supposed bitter hostility towards Anglicanism. The fact that Spenser was a Puritan in his views—at least, in his early life—is not open to serious question; but would a thoroughgoing Anglican like Young have appointed the poet to so confidential a position as that of private secretary, if the views of the latter had been so extreme as our author assumes? It is to be remembered that Young had been master of Spenser's college through the whole seven years of the poet's residence there, so that he could not possibly have been ignorant of Spenser's opinions in matters of religious doctrine and church government. These considerations weaken measurably the force of Mr. Higginson's otherwise very plausible argument regarding the May and September eclogues, that the identification of the objects of the poet's attacks with the Catholics, which we find in E. K.'s commentary, was merely a blind, these attacks being really aimed at the Anglican clergy. It seems to us most probable that Spenser was not denouncing the Anglican clergy *per se*, but merely those who perpetuated what he and his fellow-Puritans conceived to be the characteristic abuses of the old Catholic régime. We meet with such invectives against corruptions of the priesthood in every period of the history of the Christian Church, and it is to be remembered that at the time that the "Shepheard's Calendar" was written the distinction between Catholic and Anglican was not so sharply defined as later on.

As regards the interpretation of the February eclogue, the fable of the Oak and the Briar, as a covert attack on Burghley for his share in the execution of the Duke of Norfolk in 1572, we confess that this interpretation does not seem to us to stand on any better footing than the somewhat similar one of E. A. Greenlaw, which the author rejects. To start with, one may ask, if, as Mr. Higginson supposes, Spenser was afraid to circulate after September 27, 1579 (the date of the Queen's proclamation against John Stubbs on account of a pamphlet criticising the French marriage), his disguised attack on Burghley contained in "Mother Hubberd's Tale," why should he not have been afraid, on December 5, to license such an attack on the same minister in his February eclogue? Apart from this consideration, we see no analogy whatever between Spenser's fable and the Norfolk affair. In what sense did the most powerful man in the kingdom, who continued Elizabeth's chief Minister for more than twenty-five years after Norfolk's downfall, resemble the weak briar which withered after the husbandman had felled the oak against which it complained? The truth is that there is no tittle of evidence that the fable of this second eclogue has any allegorical significance whatever. Mr. Higginson urges against Mr. Greenlaw that where Spenser's satire is ecclesiastical, the object of attack is not left in doubt. But in the "Shepheard's Calendar" the only certain satire is directed against the Church, so that if in the February eclogue no satirical intention is indicated by the poet, and such an intention is indeed expressly disclaimed by his commentator, there is no reason to believe that any is present. One notes in this case, as throughout the work, a tendency which, under German influence, is becoming dangerously common in the productions of American scholarship—namely, to accept elaborated fancy as fact.

Despite the above strictures, we do not wish to deny that this is a treatise of decided ability. The biographical part, especially, possesses, on the whole, an unquestionable value. We may not agree with the writer that Rosalind was merely a patroness of the poet, or that Spenser, Sidney, and their friends ever really organized a literary club, but we believe that he has defined accurately the relations of the poet to Sidney and Leicester. Of particular interest is his convincing argument that Leicester had nothing to do with the poet's appointment as secretary to Lord Grey de Wilton in Ireland. The book, in fine, is one which all Spenser students should welcome.

Historical Sociology. By Frank Granger. New York: E. P. Dutton & Co. $1.35 net.

Professor Granger calls his latest work a "Textbook of Politics." Sociology is the theory of human fellowship, and politics is becoming more and more its bond servant. A primary need of the student of sociology is to acquaint himself with the best means of determining the facts of his science. Speculations based upon insufficient data are, we are told, the bane of modern politics, because, owing to the greater readiness of modern executives, they often lead to action. And action without careful consideration of the whole of the facts leads to consequences which are usually in part disastrous.

The course of modern politics precludes our dismissing such statements as these as mere truisms. Professor Granger, indeed, is not unwarranted in asserting that "we must rediscover for ourselves the significance of the obvious." His present work is a real aid in accomplishing this task. It is agreeable reading; it is far from being a vehicle for preconceived ideas; it is crowded with observations, many of them exceptionally acute, gathered from all ages and all climates. Much that he says brings to mind the statement of a distinguished American some years ago, that the task of science is largely to reverse the appearance of things.

Sociology is both a synthetic and a positive science. On the one hand, there is the positive increase in knowledge which takes place when discoveries are made. On the other hand, our knowledge is increased when we set in better order what is already known, and draw conclusions from it. Indeed, the value of the study of sociology is only vindicated when we can use it to draw new and fruitful conclusions. To confine one's self to the positive side of sociology is the mark of a rationalist. He arranges facts and forms inferences from them in their isolation from man, and thus leaves out the special factors which are introduced by man's individual character. Since man not only lives in the world, but makes it and judges it, no merely positive interpretation of social life can be adequate. For it leaves out of account all judgments of value. Sociology sets up a standard of value, therefore, by which it measures things. As metaphysics sets up the standard of the "real," as logic sets up the standard of the "consistent," so sociology sets up the standard of the "conscious individual." Sociology, then, is the study of social facts in the light of mental and moral science; that is, in the light of our knowledge of man as a conscious and moral being.

The present work is concerned not only with the constitution of the groups which go together to make up the huge societies of men which we call nations: it also considers the chief motives which lead to changes, to reforms, and revolutions. That is, it falls naturally into two parts, one treating of sociological statics, the other of sociological dynamics. Professor Granger's hope is that, by explaining the past, we may be able, using the same methods, to forecast some of the probable events of the future.

He takes care to add, however, that, though reform and change are part of life, they are at any moment the lesser part. And attention is called to the fact that, unfortunately, it was the characteristic of Comte, and of some of his English followers, notably Herbert Spencer, to dwell upon general resemblances almost to the disregard of specific differences, this method being really the essence of what Comte called the positive philosophy. If stress is laid rather upon the process of generalization than upon the opposite process of specification, you will be sure to go from what is less general to what is more general, until you find yourself with theories so wide that they are painfully thin and unfruitful. On these lines Spencer gradually reduced all phenomena to examples of the persistence of force, leaving no room for genius in his scheme.

Genius may be regarded as the first great modification which we must make in the notion of evolution, so far as it is applied to human society. It is not true, declares Professor Granger, that heredity involves a narrow range of variation as we pass from each generation to the next. The characteristic of each individual reproduces the characteristics of the parent in proportions that may differ very widely in each family. And the range of variation is so great that, from time to time, there arises what is equivalent to a fresh type. Man is the highest of living beings. And at the same time he exhibits the greatest range of variation. This may be expressed by saying that the difference between one human being and another is often equivalent to the difference between one species and another. The term "genius" is the name for this difference carried to a very high degree. The attempt of some sociologists to explain human society, without taking account of genius in this sense, renders barren much that passes for serious work.

Here we have the fundamentals on which the present interesting and suggestive work is built up. Into the structure is wrought material of a highly diversified character. Yet the prevailing note is one of unity. Though we are not told in Wordsworth's phrase that "the child is father to the man," such an implication meets us throughout this book—we feel that the generations of mankind are bound each to each by natural piety. Transformation is the product of genius, using the term as defined by Professor Granger. Genius, as he aptly declares, works upon the margin which separates the known from the unknown, the already done from the possible future, the tradition from the inspiration which nobly embodies the desires of a people. Hence genius is always surprising those who are merely content with the past.

The importance of this interpretation of genius to sociology is nowhere more clearly seen than in the study of the art of war. Napoleon's maxim, that the only right way of learning the science of war is to read and re-read the campaigns of the great captains, shows how his mind worked on the boundary line between the tried and the untried: how each problem came before him already partly solved, so that he could concentrate himself upon the unsolved parts of the problem. Even more to the point is this: "Our national lack of system means that genius has to devote itself to details which ought to be delegated to others, and cripples our commanders, so that they usually fight at a disadvantage." The relation of genius to its circumstances is, in a word, the key to the understanding of human history. The preacher of religion, the statesman, the social reformer in all his shapes, will be tested by their power of uniting a past which is worth keeping to a future which is worth making.

The work concludes with a note of hope. Though signs of degeneracy are plentiful, this can largely be checked by moral effort. The methods and results of eugenics are open to criticism, because, for the most part, they leave out of account the moral effort; that is to say, eugenics, as ordinarily interpreted, remains at the "positive" stage, and is therefore out of line with a complete sociological method. The Socialism of the doctrinaire followers of Karl Marx is open to the same criticism. Their incapacity to treat social life in its fulness—in its religion, its slowly acquired freedom, its wholesome traditions—makes them very doubtful guides. But there is hope in the synthetic method of treating the problem of human fellowship—not, however, in the synthetic method that would build up from the presumed foundation of things in the conservation of energy. Man in his actual life cannot be interpreted from barren economics such as that of Marx, which leaves out of account the history of human religion and human marriage.

Notes

Dr. Charles F. Thwing, president of Western Reserve University, has made a thorough revision of his work, "The Family," which he plans to publish early next year, through Lothrop, Lee & Shepard Co.

Prof. W. H. Schofield has prepared for publication a series of lectures which he delivered at the Sorbonne, while Harvard exchange professor, in 1911. The volume bears the title "Chivalry in English Literature," and will be issued by Harvard University on November 25.

The Columbia University Press has undertaken the publication of a new series, to be known as Columbia University Studies in English and Comparative Literature. It will supplant the present two separate publications, Studies in English and Studies in Comparative Literature. A forthcoming work in the new series is "Literary Influences in Colonial Newspapers. 1704-1750," by Elizabeth Christine Cook, Ph.D., promised for late in this month.

The Columbia University Press will also publish Sir Gilbert Murray's lectures delivered at the University last spring, "Four Stages of Greek Religion"; "Tiglath Pileser III," by Abraham S. Anspacher, and "Vasava Latta, a Sanskrit Romance by Subandhu," by Louis N. Gray.

Reginald Wright Kauffman has nearly completed his forthcoming book, "Judith Kent, Freewoman," which will appear shortly, with the imprint of Moffat, Yard & Co.

A new book by Harry Vardon, on "How to Play Golf," will be brought out by George W. Jacobs Co.

M. Rolland is just finishing his "Jean-Christophe," and will give to this concluding portion of the ten volumes the title "La Fin du voyage." The American edition, which Holt will issue, will be in one volume of three parts, called, respectively, "The Friends," "The Burning Bush," and "Journey's End."

"The Casual Ward: Academic and Other Oddments," is the title chosen by Mr. A. D. Godley, Public Orator to the University of Oxford, for a book of essays and verses. Smith & Elder are bringing it out.

What promises to be an attractive book is "The English Fireplace and its Accessories from the Earliest Times to the Nineteenth Century," which L. A. Shuffrey publishes shortly through B. T. Batsford.

Dr. Colin Campbell is the author of the forthcoming book, "The Miraculous Birth of King Amen-hotep III, his Coronation and Osirification," which contains, besides, a description of the New Year procession from Karnak to Luxor and back. Oliver & Boyd are the publishers.

Henry Frowde will soon add to the series of Oxford Standard Authors "The Pageant of English Prose," a companion volume to "The Pageant of English Poetry," and, like the latter, edited by R. M. Leonard.

A timely publication, in view of the recent award of the Nobel prize for literature, is Gerhart Hauptmann's new novel, "Atlantis," which is issued this week by B. W. Huebsch.

M. Pierre Loti's latest book, "Carmen Sylva and Sketches from the Orient," comes this week from the Macmillan press.

The second annual meeting of the National Council of Teachers of English will be held in Chicago, November 28-30.

Larousse Mensuel Illustré is a unique and valuable publication, the only encyclopædic periodical. The number for November contains a condensed summary of the events from September 12 to October 14, and much information by different contributors on a great variety of subjects of present interest, historic, literary, biographic, and especially scientific. A long article on wood-eating insects is illustrated by two large colored plates, and there are 153 pictures, including many portraits.

A volume of humor is almost certain to be more entertaining as a reference book than as steady reading. This is the case with "Artemus Ward's Best Stories" (Harper), which is edited by Clifton Johnson, with an introduction by W. D. Howells, and illustrations by Frank A. Nankivell. Mr. Howells confesses to misgivings over the enterprise, and contrasts the humor of Browne, to give him his real name, with that of another by remarking that Browne felt bound, first of all, to make you laugh, while Mark Twain might first wish to make you feel. Yet here and there he finds in the work of the lesser man "a sweetness, a gentleness, a fineness in the humor, and the quaint unexpectedness of its turns, which is not surpassed by anything that Clemens did." Artemus Ward "overjoyed his generation" at least, and rendered genuine service by the delight which he gave Lincoln in the President's harassed hours.

"Who's Who in Dickens" is, as further described on the title-page, "a complete Dickens repertory in Dickens's own words." The characters of the novels are listed alphabetically, with brief extracts to identify them. The book is compiled by Thomas Alexander Fyfe and published by Doran.

The appearance, simultaneously, of "A Study of Francis Thompson's Hound of Heaven" (Lane), by Rev. J. F. X. O'Conor, S.J., and "Francis Thompson, the Preston-born Poet, with Notes on Some of His Works" (Preston: Alfred Halewood), by John Thomson, witnesses to the steady interest in that late poet and essayist. The former volume furnishes the text of Thompson's most celebrated poem, together with a two-fold interpretation—literal and mystic. The latter small volume will be read, we fancy, not so much for its own flattering judgments as for the critical estimates of Thompson which are reprinted from numerous periodicals, and for instructive anecdotes. No one will soon forget the picture of Thompson, "clad—winter and summer alike—in a brown cloak, or ulster, and with a basket, like a fish basket, slung around his shoulders. In this he used to carry the books he had to review." One of his colleagues on the *Academy*, for which he wrote, tells of how unbusinesslike he was:

> His copy (always written on pages torn from penny exercise books) came pretty regularly, but it was almost impossible to get him to return proofs. Neither imploring letters nor peremptory telegrams availed. Then he would walk in, calmly produce from his basket or wonderful pockets a mass of galleys, and among them, as likely as not, two or three telegrams unopened.

Thirty years of service with sketch-book and pencil on the battlefields of three continents are summarized in the late Melton Prior's "Campaigns of a War Correspondent" (Longmans). Mr. Prior was not a correspondent strictly speaking. He drew pictures for the *Illustrated London News*, which is evidently a more hazardous occupation than writing word descriptions, since the search for draughtsman's detail brings a man closer to the firing line. At least it did in the case of Mr. Prior. His experiences began with the Ashanti campaign of 1873 and ended, so far as the present volume is concerned, with the war in Manchuria. Actually, the Russo-Japanese war brought him no experiences. With other war correspondents Mr. Prior was kept dangling at Tokio by a rigorous censorship during the first period of the war, and though ultimately allowed to go to the front was not allowed to see any real fighting. In disappointment he sailed for England. The present account is written in plain, unpretending fashion, and with more than the ordinary British imperturbability. Still, during the Zulu campaign, when his sketch book with weeks of labor in it was lost, Mr. Prior did throw himself on the ground and break into tears. It was in this campaign that Napoleon III's son lost his life. Mr. Prior and Archibald Forbes found the body after the Zulus had stripped it naked. He was with the Turkish armies in 1877-78, and grew very fond of the Sultan's people. What he has to say of Bulgarian atrocities during this war, as well as his experiences with the Christian rebels in Herzegovina, shows that rapine and massacre in the Balkans are not a monopoly of Islam.

The avowed purpose of "Tripoli and Young Italy," by Charles Lapworth and Helen Zimmern (London: Stephen Swift & Co.), is to justify Italy's course in making war upon Turkey. For the bulk of the work Mr. Lapworth is apparently responsible, and one readily gains the impression that he is presenting a semi-official brief on behalf of the Italian Government, which naturally seeks to place its cause in the most favorable light. In the opinion of Mr. Lapworth, Italy has been unjustly condemned by her critics. He contends that this was not a war of capitalists, but one based on an urgent political necessity involving Italy's very existence as a nation and as a Power to be respected. She had, he declares, either to establish her right in the Mediterranean or be encompassed by what he calls an "iron ring," forged by Germany and other Powers which sought territory in North Africa. He also asserts that Italy could no longer tolerate the persecution of her countrymen in Tripoli; that her right to the country had been acknowledged for many years by England and France; and there were good reasons to believe that Italy would be forestalled by another Power (meaning Germany) "if she hesitated a moment longer."

There has been a reawakening of the national spirit in Young Italy, says Mr. Lapworth. Social and economic reforms have been effected, and "the people feel that at last their country will take its rightful place as a great Power, and that there will now be room for the population to expand under the Italian flag without having to emigrate and serve under foreign taskmasters." There are chapters about Tripoli, its commercial value and future, if Italian plans do not fail; a discussion of political, economic, and intellectual Italy, and a presentation of her attitude towards the rest of Europe. The book is illustrated and has a map of Tripoli. Incidentally, the accusations of butchery and treachery on the part of the Italian soldiers are refuted.

The name of the author is sufficient guarantee of the authority of "Fire Prevention," by Edward F. Croker, ex-Chief of the Fire Department of New York city (Dodd, Mead). The value, in any case, of a volume in this field from his pen is enhanced by the fact that it was written for the general reader, who has been neglected by writers on this subject. While the bulk of the book is devoted to considerations of protection for lives and buildings in cities, due attention is paid to prevention of fire in dwellings and in small towns. The introduction is an unanswerable indictment of our present methods of construction. "If I had my way about it," Mr. Croker affirms, "I would not permit a piece of wood as big as a man's finger to be used in the construction of any building in the United States which had a ground area larger than 25x50 feet and was more than three stories in height." He is no less emphatic in regard to means of safety for persons employed in buildings. Future construction, he holds, must be of a type which will make the choice of instantaneous exit or death unnecessary. Fire escapes cannot insure safety. The building must be so constructed "that the flames may be confined to a limited area within which to burn themselves out, consuming only that part of the contents which cannot be removed to safety behind doors and partitions which will resist fire as effectively as the walls themselves." In both the range of its topics and their manner of treatment the book is a notable contribution to what almost deserves to be called a new science. It should be widely read, for its perusal must do much to bring about the improved conditions for which it pleads. It is well supplied with apt photographs of fire-fighting and apparatus, and has a good index.

A new edition of Elizabeth Robins Pennell's "Our House and the People in It" (Houghton Mifflin) contains fifteen illustrations by Joseph Pennell, and has in consequence undergone a transformation of title into "Our House and London Out of Our Windows." It is hardly necessary to say that these sketches are not only a delight in themselves, but they have an appropriateness which can be asserted of few pictures that are intended to adorn a tale. Most of them, as one would expect, show London as through a glass, darkly. The text is apparently unaltered. A redipping into it confirms the favorable opinion of this account of servants and acquaintances, good and bad, but mainly bad, expressed in the *Nation* November 24, 1910.

Prof. James Seth's new book, "English Philosophers and Schools of Philosophy" (Dutton) is the first number forthcoming of what promises to be an important series of The Channels of English Literature, and its purpose is to present English philosophy as literature. It has been remarked that, while French philosophers have been for the most part mathematicians and physicists, and the Germans theologians or university professors, the more conspicuous of the English philosophers have nearly all been men of affairs. Thus it happens that, not only is the style of English philosophy characterized by the absence of severity and technicality (in the words of Mr. Seth), but the interest is nearly always close to the immediate issues of life. And it is not too much to say that "English philosophy is entitled to be called literature in a sense in which the philosophy of perhaps no other nation has the same right to the name," or that it includes many names of those who deserve to rank among the masters of English prose. To a student of philosophy it is always incomprehensible how a course in English literature can omit, for example, such a vividly personal document as Berkeley's "Principles"; or how a student of English can appreciate the full power of his language who has not read Hobbes. If he desires a problem in the complication of motives—well, all philosophy, not French, is a complication of motives, and in English philosophy he may find a nice problem in Berkeley, a more evident but still very interesting one in J. S. Mill. In the field of literary criticism he will find nothing much finer than Martineau, nor, perhaps, Mr. Seth dissenting, a better illustration of the possibilities of combining grace and refinement with scientific precision in the use of the English tongue.

Of Mr. Seth's book it should be said that the purpose has been kept well in mind. The book is long enough for a leisurely treatment, not so long as to be burdensome. The style is finished and careful, and the text is skilfully interwoven with quotations by means of which, in the case of the more important philosophers, the reader acquires insensibly a taste of their style. More to the point is his catholicity of insight, which is the more commendable because the prevailing empiricism of English philosophy is hardly in line with his own point of view. He is clearly mindful of the fact that every system of philosophy, however impersonal in form, is the expression of a meaning deeply personal, and his book is an illustration of the statement that philosophy thus interpreted is literature. On the other hand, it is a gain to see that English philosophy is not so blankly empirical as it is commonly represented to be. And in the light of the past it is interesting to read his summary of present tendencies, as exemplified in pragmatism and "the new realism." "In all of them alike we may see the effect, somewhat paralyzing, of the great scientific movement of the latter half of the nineteenth century upon the philosophical mind of the English-speaking race."

"The Correspondence of William Shirley, Governor of Massachusetts and Military Commander in America, 1731-1760," has been edited by Charles Henry Lincoln and published in two volumes by Macmillan. During the last ten or fifteen years American scholars have devoted themselves with commendable zeal and excellent scholarship to exploiting the unprinted sources which throw light on the Imperial side of our colonial and revolutionary history. The result is to be seen in a rapidly increasing list of publications, both of documentary material and of monographic studies. To this new material, the correspondence of Shirley is a useful addition. The collection consists mainly of letters of Shirley to the Duke of Newcastle and to officials in other colonies; but some letters from Mrs. Shirley to the Duke of Newcastle, some from the Duke of Newcastle to Shirley, and some instructions to Shirley, have been included. Altogether the two volumes contain about 450 documents, most of which have not been printed before. The great majority of the letters have to do with the military events of the two wars in which Shirley was so actively engaged. So far as details go, they increase our knowledge of these events considerably, and they confirm what is already known of the difficulty of obtaining effective coöperation among the colonies for any scheme of general defence. They have rather less to say than might be expected about contraband trade, but they have a good deal to say about the neglected and very important subject of paper money, which is a subject that awaits an investigator. These letters make it clear that while the paper-money legislation of the colonies often discriminated against English creditors, there was a real need for such currency, a need which was recognized by Shirley and Colden, among others, and by the English Government itself prior to the adoption of Grenville's short-sighted policy. Shirley discusses at length the question of Indian policy. Of the necessity of dealing with the unoccupied lands from the point of view of Imperial defence and Indian relations, he was fully aware, and his letters as early as 1755 suggested the policy which was afterwards embodied in the Proclamation of 1763.

"Pure democracy," declares a former president of Princeton, in a volume recently come from the press, "cannot subsist long nor be carried far into the departments of State; it is very subject to caprice and the madness of popular rage. . . . The multitude are very apt to trust a man who serves them well with such power that he is able to make them serve him." The author of these unprogressive sentiments was not debarred by them from advancement in either New Jersey or national politics; but that was above a century and a quarter ago. The words quoted were written by President Witherspoon, sixth head of the College, member of the Continental Congress, and a signer of the Declaration of Independence, whose "Lectures on Moral Philosophy" have this year been reprinted with an historical introduction and notes by Prof. V. L. Collins (Princeton University Press). The volume represents the first fruits of a plan, initiated by the American Philosophical Association, to obtain the publication or republication of the writings of early American philosophers. It is proposed that the works selected by a committee of the Association be published by the institutions with which the authors were connected. The present book is the memorial of a somewhat untoward event in the intellectual history of America. President Witherspoon did much to strengthen Princeton, and to give to it a commanding educational influence throughout the Middle and Southern States; but he also made the Scottish philosophy of common sense the official Princeton doctrine. "On his arrival" from Scotland, in 1768, says Professor Collins, "he found the tutors and thinking men in the College eagerly supporting the idealism of Berkeley, and upon them he mercilessly fell with argument and ridicule until he had driven Berkeleianism out of Nassau Hall." For it he substituted the doctrine of Reid, "which, for the next twenty-five years, he was to hammer home, and so firmly intrench on the congenial soil of the New World that, in its general features, at least, it became not only the traditional philosophy of the Princeton School, but, in the opinion of many thinkers, preëminently the philosophy of America." But the doctrine of the Scotch School, however judicious and edifying, was scarcely productive of openness of mind or boldness in thinking; it operated, in the main, especially in its American form, as a sedative to the spirit of inquiry. "Common sense" has seldom been the motto under which the great triumphs of science or of speculation have been won. The dominance of the ideas introduced chiefly by Witherspoon meant the death of certain tendencies which had begun to appear at Columbia, at Philadelphia, and in Virginia and Kentucky—tendencies which, though they may not have been doctrinally more sound, had in them more of the breath of intellectual life. This little volume thus recalls the beginning of an influence which did much to keep the

American intellect lethargic, if not asleep, for more than a generation.

James Quay Howard, a writer, and for the past fifteen years one of the assistant librarians of Congress, died in Washington on Friday, aged seventy-five. Shortly after Lincoln's nomination Mr. Howard went to Springfield, Ill., where, after personal conferences with Lincoln, he obtained material for a campaign life, which was the first biography of Lincoln ever published. Later Mr. Howard wrote the official campaign life of Rutherford B. Hayes. He was also the author of a "History of the Louisiana Purchase," in which he gave Robert R. Livingston and not Jefferson the credit for the achievement.

Science

NATIONAL ACADEMY OF SCIENCES.

WORCESTER, Mass., November 13.

The autumn meeting of the Academy was held at New Haven on November 12 and 13. The beautiful new Sloane Physics Laboratory of Yale University furnished an excellent place for the meeting, and the arrangements provided by the local committee were admirable. About fifty members were in attendance and twenty-one papers were read, nearly all having to do with geological or biological subjects.

William M. Davis, of Harvard University, in a paper entitled "Physiographic Evidence in Favor of the Subsidence Theory of Coral Reefs," gave arguments for a theory which was proposed fifty or sixty years ago by Dana, but which has received scant attention by naturalists since that time. In the case of a mountainous island surrounded by a barrier reef it may be possible that the reef grows laterally without subsidence or by upward growth upon a sinking mass. By looking at the reef it may be impossible to distinguish between these two cases, and, in default of zoölogical evidence, Professor Davis suggests that the physiographic evidence obtained by looking at the mountain seems to show subsidence. The case of a mountain with a radial pattern of ridges alternating with bays giving a star shaped shore line seems to be beyond production by marine erosion, which would produce vertical cliffs. But ordinary erosion of the land would produce the radial valleys, and the submergence of the whole pattern would give the indented shore line. For instance, Greece has bays with a wash of gravel which has come down from the mountains. In coral islands the absence of wash shows a continuous sinking, as in the theory of Darwin and Dana. The question why the valleys are not continued under the sea is answered by the explanation that they have been filled up by the growth of the coral after submergence.

William B. Scott, of Princeton University, in a paper on "Restorations of Tertiary Mammals," gave an interesting explanation of the process, so mysterious to the layman, by which the palæontologist is able to reproduce the appearance of extinct animals. Having disposed of the popular idea that the naturalist from one bone can reconstruct the whole animal, he stated that any restoration must be founded on a virtually complete skeleton. The number of these is few, but is constantly increasing. It is a simple matter to put the muscles on the skeleton, as all leave indications on the bones. It is more difficult to decide whether the animal did or did not possess hair, and what its color was. Nevertheless, we now know that the color design is almost always such as to cause the animal to be invisible in its ordinary surroundings. This would generally be attained by longitudinal stripes which were often later broken up into spotted patterns. The fawns of all deer are still spotted, showing that deer were spotted until recently. As a result of these principles, Professor Scott showed numerous very life-like illustrations, which he compared with some of those produced under the direction of Professor Osborn, the two sets displaying decided similarity.

Henry F. Osborn, of the American Museum of Natural History, in a paper on "Geologic Correlation of Upper Palæolithic Faunas of Europe and America," described a recent visit to the palæolithic caverns of Italy, the south of France, and Spain. All these caverns contain most interesting drawings, about 4,000 in all, of palæolithic animals of the upper pleistocene, such as the mammoth, the lion, the horse, ass, and ibex. These caverns in the limestone are sometimes half a mile in depth, and are frequently entered with great difficulty through a very narrow opening. The outlines of these pictures were cut in the stone and the surface then colored, showing that, although the caves were formed by the action of water, they have been free from water since the drawings were made. In one newly discovered cave there have been found two small clay statuettes of bisons showing fingerprints of palæolithic man on the clay. These drawings, executed at least 25,000 years ago, were by no means of the rough sort made by children, but were most artistically executed and, as shown in a number of lantern-slides, produced a profound impression of the development of skill in man of that remote time.

Jacques Loeb, of the Rockefeller Institute, in a paper "On the Fertilization of the Egg of Invertebrates with Blood," described some of the ways in which artificial parthenogenesis may be brought about. An egg may be artificially fertilized by the production of a fertilization membrane formed on its exterior by the aid of acids, bases, glucosides, or other reagents used in bacteriology. The egg is put in the medium for a time, and when set back in sea water will develop, but a second treatment with the reagent is generally necessary. Among the agencies that may be used is blood, which even when diluted 500 times will fertilize the eggs of the sea urchin. The blood of any foreign species, particularly of mammals, is efficacious. At first only about one in ten of the eggs would develop, but it was found that the use of chloride of strontium or barium makes the egg sensitive to the action of the blood. It is important to note that the fertilization membrane can be called forth by the blood of a foreign animal, but not of the animal itself; otherwise all animals would be parthenogenic. The explanation of this is contained in the physical property of diffusion, that is to say, two different solutions can diffuse into each other through a membrane, while two similar ones cannot; thus, the foreign blood can diffuse into the egg, while the blood of the animal itself cannot. It is to be noted that the offspring of parthenogenesis is always male. The question arises whether what has been stated is true of other species as well as for the sea urchin. As a matter of fact, the refractory eggs of certain molluscs were successfully treated with ox blood, and Dr. Loeb concludes that in the blood of all animals there is a substance causing fertilization membranes and subsequent development.

Edwin G. Conklin, of Princeton University, treated the problem of "Cell Division and Differentiation"—that is, the question: How does the simple egg cell become the complicated structure of the adult? This is the meaning of the term differentiation. In the first place, it is shown that the egg is not entirely homogeneous, but that it contains a variety of materials capable of forming the different body structures, even before division begins, from which materials the different parts of the adult develop. In the process of division the cell first splits into two, each of which again divides, and so on, until there are hundreds of cells. If the egg does not divide, we do not get much differentiation. In the cell division we have the different materials segregated in different cells, the partition between the cells being impervious to the different substances. The nucleus of the egg also divides, sending out diffusing streams, which cause the different substances in the cell to mix. Those in the surface layer, on the contrary, do not mix, so that differentiation begins at the periphery. When a cell is formed with no partitions there is a large mixing, but when there is a partition the different substances cannot mix through it, and differentiation takes place. This is tested by preventing the cell division. Each nucleus then divides, but the partition does not form, and there is no differentiation.

Charles B. Davenport, of the Station for Experimental Evolution of the Carnegie Institution, in a paper entitled "Heredity of Skin Color in Negro-White Crosses," examines the question whether the mixture of negroes and whites is an exception to Mendel's law, since in this case we have a blending of the characteristics rather than separation of the characteristics of the parents in the descendants. The method of the investigation was to send tactful field workers to ascertain accurately the parentage, while the color of the skin is carefully determined by matching it to the hue of a color-mixing top. The skins of 700 offspring were measured, as also those of the parents. Inasmuch as the color changes with the age, it is necessary to make an allowance for this. Observations were made in Bermuda, where there are two classes of blacks, the descendants of the Senegambians being darker than those of the Gold Coast. It turns out that when two mulattoes are crossed the offspring varies much more than in the first generation, clear whites appearing as well as dark skins. In eighty-one offspring of mulattoes there were five whites, which is almost exactly the one-sixteenth demanded by Mendel's law if there are four factors for black. The whole population being plotted and compared with the calculated expectation gives a surprising agreement with the theory of heredity.

Franz Boas, of Columbia University, in a paper on "New Data on the Influence of Heredity and Environment Upon the Bodily Form of Man," continues in a different manner the study which he has hitherto made of the physical characteristics of the children of immigrants. Just as a tall father and short mother produce children who tend to be more variable than when the parents are alike, so by examining the population of any region where two types overlap we should expect to find increased variability in the intermediate region. In northern Italy we find a short-headed type, while in southern Italy we find a long-headed or Mediterranean type. Thus we have low variability in the north and south, with high variability in the central region. We also find the Mediterranean type on the Ligurian coast, which is near the Alps, where the other type exists, while between is the region of high variability.

Ernest W. Brown, of Yale University, presented a paper on "The Problem of the Asteroids." There are about eight hundred of these small bodies, mostly lying between the orbits of Mars and Jupiter, many of them too small to be seen unless their position is known with considerable accuracy. This prediction of position is a problem of great mathematical difficulty, and whereas most of the planets and their satellites give rise to mathematically similar cases of the problem of three bodies, the asteroids belong to several entirely different cases, and thus constitute, so to speak, the laboratory of the student of celestial mechanics. In most cases the orbit of the asteroid, which is not a closed curve, is not even very near to being a circle. If we find the average orbit of all the asteroids we see that they occupy a belt of a certain diameter, and that then there is a gap containing few asteroids, then another belt, a second gap, and then a belt. Comparing the period of Jupiter with those of the asteroids, Professor Brown suggests that there is a phenomenon similar to that of *resonance*, by which the cumulative action of Jupiter causes a large oscillation in the radius vector of the asteroid, and that this large oscillation gives rise to a change of period in the asteroid. Saturn may produce a similar phenomenon. The existence of the gaps is undoubtedly due to the same causes as those producing the gaps in Saturn's rings, which are known to be composed of swarms of small satellites.

Robert W. Wood, of Johns Hopkins University, contributed the only physical papers, three in number. In describing some results obtained with the most powerful spectrograph in the world, he showed the construction of the apparatus at his summer laboratory at East-hampton, where a large flat diffraction grating five inches square, ruled with seventy-five thousand lines in all, gives him a powerful resolution, while a lens of forty feet focus gives a high dispersion. The grating and lens are mounted on a column out of doors, while the slit and camera are indoors, and the tube is made of wood protected by a narrow roof. Samples of the work of the grating in the resolution of the green mercury line were shown, which compared favorably with the work of the echelon grating and the interference methods now so popular. It even seems likely that with gratings of the goodness of those now obtainable the grating may once more take its place as the most accurate instrument for wave-length determinations.

In a second paper on the possibility of photographing molecules, Professor Wood suggested that this apparently impossible result may be accomplished by the methods of ultramicroscopy. The principle of this method is that of illuminating a small body in a perfectly black field, all the extra light being carried away by total reflection at the surface of a prism on which the small body lies. By diffraction from the small object an image is obtained, and Professor Wood believes that a molecule might be photographed if a sufficiently long exposure were given. It will be necessary to find a substance which fluoresces strongly in ultraviolet light, and to secure the molecules in a solid solution, such as a layer of celluloid.

The members of the Academy enjoyed the hospitality of the local members at a dinner at the new Taft Hotel, and of Yale University at a reception given by President and Mrs. Hadley in the art galleries of the University.

ARTHUR GORDON WEBSTER.

Among the science books shortly to be published by the Columbia University Press are the following: "Graphical Methods," by Carl Runge, professor of applied mathematics in the University of Göttingen, and three volumes of the Studies in Cancer and Allied Subjects—Vol. I, "The Study of Experimental Cancer, a Review," by William H. Woglom; Vol. III, "Studies from the Departments of Zoölogy, Surgery, Clinical Pathology, and Biological Chemistry," and Vol. IV, "Contributions to the Anatomy and Development of the Salivary Glands in the Mammalia." Vol. II, "Pathology," has already been issued.

The Congress of Americanists, which met this year in London, has accepted the invitation to hold the next meeting in Washington, in 1914, probably in September; and a permanent committee has been formed to make preparations. The sessions of the Congress will take place in the new building of the National Museum. A second session, following that in Washington, will convene at La Paz, Bolivia.

"The Tyne," the opening article of the *Geographical Journal* for November, by A. J. Sargent, is a suggestive study of the geography of a region in which is shown the correlation of three sets of facts, the geological, topographical, and economic, and also the relation of man to his environment, which has led to an extraordinary concentration of industry. Dr. Carl Lumholtz gives an account of the Sonora Desert of Mexico and the Papago Indians. Notwithstanding the scarcity of rain, the soil is in places extremely fertile, and will doubtless "some day delight the eye with waving fields of grain and orchards of fruit." Prof. A. J. Herbertson, of Oxford, shows, with sketch-maps, the way in which the thermal conditions of the earth's surface can be represented for the use of geographers.

Among the noteworthy contents of *Petermann's Mitteilungen* for October are an account of a Danish expedition through Iceland by its leader, Capt. J. P. Koch, a report of his recent explorations in the Pamirs by A. v. Schultz, and the proposals for the construction of airship maps made by the cartographical commission of the International Aeronautic Federation. In the military department are described the new fortifications on the Italian-Swiss frontier and their significance, and the railway system and fortifications of Servia. There is also an account of a projected naval port on the southern coast of Korea. If the plans of the Japanese Marine Department are carried out, in ten years Chinhai will be the greatest naval port in eastern Asia.

William Ogilvie, astronomer and explorer, died last week in Winnipeg, Manitoba, at the age of sixty-six. He was appointed chief clerk and astronomer of the Canadian Department of the Interior in 1896. He was in the Yukon when gold was discovered; was commissioner of police there in 1887, and Governor of the Yukon Territory from 1898 to 1901. One book, "Early Days of the Yukon and the Klondike," bears his name.

Drama

Plays by Anton Tchekoff. Translated by Marian Fell. New York: Charles Scribner's Sons. $1.50 net.

The translation of these four plays of the Russian dramatist—"Uncle Vanya," "Ivanoff," "The Sea Gull," and "The Swan Song"—was presumably a labor of love, and so may prove, as is said to happen in the case of virtue, its own reward. It is not likely to create any great popular demand for his works in the English-speaking world. Not often is so much depressing and futile matter contained within the covers of one small volume. That the adaptation has been made faithfully, if with very little cunning, there is abundant internal evidence, but it is difficult to discover in it many traces of the delicate and original genius and the remarkable humor of which Miss Fell speaks so enthusiastically in her preface. In "The Sea Gull," indeed, which was recently reviewed in this journal, and need not now be further considered, there is some fancy; but "Uncle Vanya" and "Ivanoff," however truthfully they may reflect social and intellectual conditions among Russians of the middle class in the latter part of the nineteenth century, are, for the most part, realism of the dreariest kind, while, in construction and incident, they are drama of the crudest order. Personages come and go in the most arbitrary fashion, orate interminably in explanation of their feelings and conduct, and act, when they do act, in defiance of probability. Nevertheless, there are individual passages in the dialogue which are eloquently descriptive, and others which indicate keen insight into character and motives, making it easy to see how Tchekoff may have excelled as a writer of short stories. His dramatic genius, if he possessed it, was imperfectly developed when he wrote these works.

Neither "Uncle Vanya" nor "Ivanoff," in spite of occasional melodramatic violence, has any real theatrical value. Atmosphere, personages, and incidents would, on the European stage, appear tiresome and incredible. In the first we have a family dominated and enslaved by an elderly professor, inconceivably selfish and empty. Dolt as he is, he monopolizes the services of everybody about him, until life in the household is intolerable. His beautiful and faithful young wife, Helena, of whom he is inordinately jealous, is beloved by the hero, Vanya, and a doctor—representative of the younger Russian *intellectuels*—who is the more favored suitor. His ardor brings matters to a crisis, and Helena, to save herself, implores Vanya to devise some means of making her husband take her away from the house. The simplest plan that occurs to him is to murder the bore, but he is such a bad shot that he misses him twice. However, this gentle hint has its effect, and the professor promptly departs with his wife, leaving the others to "live their lives"—utterly drab and hopeless lives—in comparative repose. The piece is packed with petty or morbid detail, and, even admitting it to be photographically truthful in much of its coloring, is not any more artistic or instructive than it is entertaining.

The hero of "Ivanoff" is, presumably, offered as a type of an *intellectuel* rendered impotent by his own mistakes and the force of circumstances. Actually, he is a spineless, egotistic, contemptible driveller, whose incessant bewailings of his own worthlessness—which is altogether indisputable—soon become direfully monotonous. Having married a lovely Jewess for her money, which he does not get, he hastens her death by cruel neglect and infidelity, and then, after agreeing to marry an heiress who adores him, becomes so remorseful that he blows out his brains before the guests invited to the ceremony. Such a tale in the hands of a real dramatist might easily be made effective, if not highly tragic; but as Tchekoff has told it—in the vein of the social satirist—the interminable loquacity of the characters, their incredible behavior, and the awkwardness of the whole machinery, make it dreary and nonsensical. Such amateurish work if put forth by an English dramatist, would not engage serious attention anywhere.

"The Swan Song," in which an old actor, once eminent, but long ago relegated to the ranks of the buffoons, reenacts passages from former triumphs in an empty theatre, where he has fallen asleep after a drunken debauch, is a mere sketch, and is not wholly original in idea, but exhibits more of the true theatrical sense than either of the more ambitious pieces.

The first volume of Hauptmann's complete dramatic works, which B. W. Huebsch has in hand, will be published in a few weeks. It contains critical and biographical introductions and four plays.

Granville Barker has been very busy in London lately in preparing his production of "Twelfth Night"—on the same lines as "The Winter's Tale"—and of John Galsworthy's new play, "The Eldest Son." In "Twelfth Night" Hayden Coffin is to be the Clown, Feste; Evelyn Millard, Olivia; Arthur Wontner, Orsino; Henry Ainley, Malvolio, and Lillah McCarthy, Viola. If Mr. Barker had his way, he would play the comedy without a break, but as the piece falls naturally into three divisions, it will be so given at the Savoy. About a week after the first performance Miss McCarthy and Mr. Barker hope to present John Galsworthy's new play at the Kingsway.

Mrs. Pearcy Dearmer's new morality play, "The Dreamer," described as "a poetic drama of Joseph in Egypt," is to be seen for the first time at the King's Hall Theatre, Covent Garden, London, on the evening of November 28.

There was a large congregation at Southwark Cathedral, London, the other day, when Sir Sidney Lee unveiled the Shakespeare Memorial. The monument, which is the work of Mr. Henry McCarthy, consists of a Gothic shrine, within which lies, in semi-recumbent attitude, a life-sized alabaster figure of the poet. Sir Sidney gave an address in which he said that the greatest period of Shakespeare's career was identified with Southwark, and alone of all the buildings in Southwark to-day the cathedral was a living memory of his epoch. The links that bound Shakespeare's memory to that place were strong indeed. He resided at one time just outside its precincts, and his younger brother, Edmund Shakespeare, described in the register as "a player," was buried in the cathedral "with a forenoon knell of the great bell." The ghosts of the princes of Elizabethan drama haunted those aisles, and warm must be their welcome of that new presentment of the monarch of their craft.

In a curtain address at the Shakespeare Theatre, Liverpool, a week or two ago, Forbes Robertson paid a tribute to the work of the Repertory Theatre in that city, and appealed to the public to give that enterprise encouragement. He said that in the drama there was less centralization than when he first appeared in Liverpool, and the great cities of England and Scotland should be still more independent as time went on. He referred to the possibility of a repertory theatre becoming a municipal theatre, and said he felt very strongly that the time was coming when the drama should have the encouragement that the other fine arts had had in all the great cities.

George Ober, well known as a capable actor and manager of outdoor performances, died in Hastings-on-Hudson on Sunday. He was born in Baltimore, Md., sixty-three years ago, and in his youth played in the companies of Booth, Charlotte Cushman, Frank Mayo, E. L. Davenport, and Edwin Forrest. For ten or twelve years he was at the Madison Square Theatre, where he was a prominent performer in Hoyt's farces. Recently he had been engaged in outdoor performances of "The Rivals," "She Stoops to Conquer," and "As You Like It."

The death of Mrs. Lewis Waller, wife of the well-known English actor-manager, is announced from London. She was an actress of considerable intelligence and ability. As Florence West she won popularity both in London and the provinces. Her first appearance was in 1883 as Mary Belton, in "Uncle Dick's Darling," with the late John L. Toole. Thereafter she played many leading parts in London and elsewhere with general acceptance, but she never attained to a place in the front rank.

Music

Tchalkovsky's correspondence with Balakireff has been published by J. H. Zimmermann in St. Petersburg. Balakireff was the head of the Russian National School, and the preface states that he alone could persuade Tchaikovsky to accept criticism and be guided by it, to the extent of recasting or even destroying a work, the score of "Fatum," for instance, which was reconstructed after his death from the preserved orchestral parts.

The New York opera season, which opened at the Metropolitan on November 11 with Puccini's early work, "Manon Lescaut," will run along in well-worn ruts. Most of the operas to be sung belong to the usual Italian and German repertory, France being sparsely represented, although one of the few novelties promised is Leroux's "Le Chemineau." One of the operas Russians are proud of, Moussorgsky's "Boris Godounoff," is to be staged, and in January or February the operatic version of "Cyrano de Bergerac," by W. J. Henderson and Walter Damrosch, will be produced. The score was written ten years ago, but the composer has done the orchestration all over again, and added an entirely new fourth act. Mr. Damrosch has also given out the valuable information that he has used the whole-tone scale to typify the huge nose of Cyrano—not, however, as Debussy uses this scale, with serious intentions, but only in burlesque fashion, which is a comfort. There will be no novelties this season by prominent foreign composers. Humperdinck and Puccini have not done anything since they visited us; Debussy and Charpentier seem to be idling away their time (though there are rumors to the contrary); Mascagni and Leoncavallo write pot-boilers, while Richard Strauss is tabooed at the Metropolitan, although there is talk of producing there, next season, his new opera, "Ariadne auf Naxos," recently launched in Stuttgart. Apart from such interest as exists in the standard works of Wagner, Verdi, and Puccini, the centre of attraction will therefore be in the work of the great singers. Several of them will appear on Saturday afternoon in the first Mozart performance given at this house in several years—a revival of the "Magic Flute," which is to be staged with unexampled sumptuousness, the scenery being modelled after that which, a year or so ago, created such a sensation in Berlin. The performances of the first week indicated that nearly all of the favorite singers have returned from Europe in exceptionally good voice. A flattering tribute was paid by the audience on the opening night to a newcomer, Lucrezia Bori, of Spanish descent. She is strikingly like Geraldine Farrar in appearance, gesture, facial expression, talent for action, and, especially, in vocal quality and expressiveness.

When Mendelssohn Hall was handed over to the moving-picture men the givers of vocal and instrumental recitals scattered in all directions, seeking places that would be acoustically satisfactory and large enough without being as huge as Carnegie Hall. The Kneisel Quartet found a temporary home in the Hotel Astor, and other concert givers found temporary refuges in theatres. The completion of the new Aeolian building has once more provided a happy home for soloists and chamber musicians. They availed themselves of the opportunity so eagerly that almost every date for the season was taken in advance. Fortunately, the acoustic properties of the new Aeolian Hall have proved excellent. Several singers have already been heard there, as well as a pianist and the Kneisels, and the general verdict from all over the auditorium is that the music sounds well—better perhaps than in any concert hall New York has had. The hall was hardly intended for orchestras: it seats only 1,200. Nevertheless, the New York Symphony Orchestra makes its home there by way of experiment, with results better than they were last year in the Century Theatre, though not so satisfactory as they have been found for soloists and smaller instrumental ensembles. The honor of opening the new hall fell to Gottfried Galston, of Hungarian and Bohemian ancestry—a good combination for a pianist. He showed more brilliancy than depth in a set of twelve Chopin études, and gave a lucid performance of Beethoven's sonata, opus 106, which seems to be in fashion this year, though it is by no means a masterwork. Musicianship of the highest type was displayed in the playing of some of Bach's choral preludes as translated for the piano by Busoni. Later on it will be possible to play these preludes on the instrument for which they were written, as the hall is provided with a large organ, nearly completed, of which much is expected. Heretofore, New York has never had a satisfactory grand organ in a concert hall. It is likely that the innovation will call into existence organ recitals for which the public will pay, as it does for piano and other recitals.

The only opportunities New York will have to hear Fritz Kreisler, the incomparable violinist, this year will be at the second Boston Symphony Orchestra concerts, which will be given in Carnegie Hall on Thursday evening, December 5, and Saturday afternoon, December 7. Mr. Kreisler has just arrived in this country, and will be here until the end of December. He comes under exclusive contract with the Boston Symphony Orchestra, and will appear with no other organization of the kind in the East.

Despite the persistent opposition of Saint-Saëns, Gustave Charpentier has been appointed successor of the late Jules Massenet at the Académic des Beaux Arts. One of the Paris journals advocated the choice of Vincent D'Indy, who, however, wrote to the editor: "I am not and I shall not be a candidate, for many reasons which it would be useless to explain here."

Mme. Minnie Hauk Baroness von Hesse-Wartegg, the once-famous American opera singer, died in Munich on Saturday. Born in New York in 1852, of a German father and an American mother, she made her first public appearance at the age of twelve. Four years later she sang in "La Somnambula," and the same year appeared at Covent Garden, in Russia, and in Holland. Later she was heard repeatedly in Berlin and Vienna. She was the first Carmeu in America.

Joseph Wieniawski, whose death is announced from Brussels, was as good a pianist as his brother Henri (who came to America with Rubinstein and died in 1880), was a violinist. He was born at Lublin, Poland, in 1837. The two men played together in concerts in Russia and Germany. Joseph then went to Weimar to study with Liszt. From 1865-69 he was professor at the Moscow Conservatory, and subsequently he taught at the Brussels Conservatory. He wrote a piano concerto, a sonata, a number of mazurkas, and other short pieces.

Art

Prehistoric Thessaly: Being Some Account of Recent Excavations and Explorations in Northeastern Greece from Lake Kopais to the Borders of Macedonia. By A. J. B. Wace and M. S. Thompson. New York: G. P. Putnam's Sons. $6 net.

Thessaly, situated as it is between Bœotia and Macedonia, occupies the important position of connecting Greece with the north, so that all questions bearing on the relations between Greece and the Balkans can be determined only with reference to Thessaly Mr. Wace and Mr. Thompson, therefore, undertook a task of no little importance when they determined to explore properly that country. They were, of course, not the first in the field. Lolling, Tsundas, Stais, Arvanitopullos, and others had at various times excavated prehistoric sites in Thessaly; but Mr. Wace and Mr. Thompson have not only materially supplemented the work already accomplished, but have published all our present knowledge of the subject in admirably systematic form.

The first ten chapters of "Prehistoric Thessaly" are purely descriptive and contain full accounts of the authors' own excavations at Tneotoku, Zerelia, Lianokladhi, Tsani, Maghula, Tsangli, and Rakhmani; and a summary description of the discoveries of others. The remaining chapters deal with the chronology, history, and ethnology of Thessaly. In this respect the book is a typical example of what archæology, treated scientifically, can produce; for the theories advanced are based on no literary documents, but purely on the data provided by excavations. The authors point out that one of the most important points to be realized about Thessaly is its backward stage of civilization compared with the rest of Greece. While Crete was already in an advanced stage of civilization (middle Minoan period) and had long known the use of bronze, Thessaly was still in the stone age, without any apparent knowledge of the use of metals.

From the artistic point of view, the

excavations in Thessaly have made no important contribution. But, though this fact takes away from the æsthetic interest of the subject, historically it is of great value. For Thessaly appears to have played the part of a buffer state, helping to protect the civilized regions of Southern Greece from the more vigorous tribes of the northern Balkans. At the end of the prehistoric age Mycenæan culture at last reached Thessaly; but it was short-lived, for apparently the very opening up of Thessaly pointed the way to the northern invaders, who overran the whole of the peninsula, swept away the Mycenæan civilization, and initiated the new era known as historic Greece.

There is another question which is vitally affected by this fact of a backward Thessaly, and that is whether civilization spread from the Danube valley to the Ægean basin, or vice versa. The evidence of Thessaly, the authors hold, points to the probability that there was no one civilization that spread either from south to north or from north to south; but that the two cultures are parallel, related, of course, to each other, but not of a single origin.

The objects discovered during these Thessalian excavations consist of vases, stone axes, terracotta figurines, and miscellaneous objects, now deposited in the Museums of Volo, Almiros, and Athens. By far the most interesting finds are the potsherds, of which a great quantity were discovered. Each site had apparently its characteristic type of vase and scheme of decoration, so that altogether an extraordinary variety came to light. In their enumeration of the different wares the authors cite about sixty different varieties, divided according to periods and techniques into four chief classes, with various subdivisions. The sites themselves are in the shape of mounds, formed by the rubbish and the ruins of successive hut settlements built one over another and attaining sometimes a length of two hundred metres. Remains of houses were frequently discovered, but no one house type seems ever to have become universal in Northern Greece.

"The Engravings of William Blake, a Critical Study, together with a Catalogue Raisonné," by Archibald G. B. Russell, is promised by Houghton Mifflin Co. for Saturday.

"Mornings with the Masters of Art" (Macmillan), by H. H. Powers, treats the chief painters and sculptors of the Florentine Renaissance, Raphael being included. Towards the primitives Dr. Powers's attitude is, perhaps, a shade too condescending. The masters of the High Renaissance receive generous and discriminating praise. The comment is independent and vigorous, while the historical illustration is entirely adequate. A few errors may be noted. No modern critic ascribes the Franciscan allegories at Assisi to Giotto's early period. The frescoes of the Spanish Chapel are Florentine, not Sienese. Cavallini should have been mentioned as the author of the mosaic stories in Santa Maria in Trastevere. On the side of historic development there are serious gaps in this book. Yet, on the whole, it is an excellent introduction to the subject. For class purposes it might profitably be used along with Wölfflin's more critical and systematic analysis of Renaissance art.

"The Study of the History of Art in the Colleges and Universities of the United States," by Earl Baldwin Smith, is a compact register of all academic courses in the history of art offered in America. Since the date of foundation of each course is given, the pamphlet constitutes a brief history of the subject. It was prepared for the recent International Congress of Art History at Rome, but will also serve a useful purpose as a directory. It appears from the survey that only Harvard and Princeton offer reasonably full university facilities for research. Of the four hundred colleges in America, ninety-five give courses in the history of art. Sixty-eight have a special professor in the subject, and may be said to be adequately equipped. About one-seventh of American collegiate students have the opportunity of instruction in art history. This tabulation shows how much is yet to be done in gaining for the subject the academic recognition it deserves. But a study of the dates of foundation of the courses will also demonstrate a remarkable progress within the past decade. This useful little pamphlet is published at 50 cents by the Princeton University Press.

A special meeting of the British School at Athens was held, October 29, in the rooms of the Society of Antiquaries in London. The director, Mr. R. M. Dawkins, gave an account of the site of Datcha, the ancient Stadeia, on the promontory of Knidos on the western coast of Asia Minor. This was to have been the object of the School's excavations last spring, but the outbreak of the Turco-Italian war made it necessary to postpone the work; but it is hoped to carry out the excavations during the coming spring. The site has already yielded a number of antiquities, and there is every reason to suppose that below the surface are the remains of an important sanctuary or temple of the archaic period of Greek art. Mr. A. J. B. Wace briefly described the excavations of the School in Thessaly, and outlined the results of exploring journeys undertaken by Mr. M. S. Thompson and himself in Macedonia. At Halos, in Thessaly, some experimental excavations were made in the Necropolis. The principal results were obtained from a tumulus, one of a group of ten, concealing sixteen burnt graves, or pyres. The bodies had been burned on the spot, and then a cairn of large slabs about two feet high was heaped over them. Later the tumulus of earth was built over the group of pyres. With the dead were placed quantities of geometric pottery, iron knives, and iron swords and spears, or bronze brooches and bracelets. These pyres belonged to the developed iron age, and dated probably between 900 and 800 B. C.

The death is announced from London of the well-known architect, Richard Norman Shaw, R.A. He was born in Edinburgh in 1831. In 1858 he published a book of "Sketches from the Continent," and later edited, with T. G. Jackson, "Architecture, a Profession or an Art." For his recreation he has set down "collecting interesting old things—such as clocks, furniture, blue china, etc."

Finance

NEWS AND THE MARKETS' RESPONSE.

A fortnight ago, the two main topics of interest, to people discussing the future of the financial markets, were how the Stock Exchange would greet the results of the Presidential election, and what it would do in response to the next developments in the Eastern war. There were numerous predictions, including some—like prophecies of a wild "bull movement" here when the election news was received, and of another "European panic" when the allies drew near to Constantinople—which most people regarded skeptically. But the favorite theories undoubtedly were, first, that if stocks did not advance at New York in the day or two after November 5, they would break heavily on the coming "tariff uncertainties"; secondly, that Europe's markets would grow more and more apprehensive as the question of terms of peace intruded itself, but, thirdly, that if Europe were once to start buying back the American stocks which it sold to us last month, New York would itself begin buying heavily, and a swift recovery on our Stock Exchange would follow.

Here were three distinct and more or less conflicting predictions. The conditions on which the three were based have in every case been realized. In the actual result, all three predictions have turned out wrong.

Except for the brief and abortive bidding-up of stocks on the afternoon of Wednesday, November 6, there was no "bull movement" in sequence to the election news. Nevertheless, there has been no sweeping decline, and prices are still above where they stood on the day before election. The news dispatches have repeatedly, during the fortnight past, been filled with hair-raising intimations that the Powers were hopelessly at variance and that Austria was about to challenge Servia. But prices on the European Stock Exchanges advanced last week without any interruption under the lead of British and French public securities, which are now respectively 3 and 2¼ points above their low prices of October.

Nor was this all; for London has in the meantime been buying back American securities from the New York Stock Exchange; taking on balance, last week, upwards of 100,000 shares, worth, roughly, $10,000,000. Yet on each successive day of this movement London's buying was followed by such realizing at New York as checked the tendency to recovery. It is in order now to inquire why all of the confident and seemingly well-grounded prophecies of two weeks ago should have missed their shot so badly.

It is possible that Wall Street itself will never agree upon the answer, but there are some fairly convincing explanations which occur to mind. As regards the "post-election market," it is evident enough that the financial community had no stomach for the foolish election boom of 1908 and 1904, and that it did not relish, on second thought, the prospect of possible disturbance in business plans from tariff legislation. But when it began to "discount" such misgivings through a sharp decline in prices, it was at once confronted with the considerations that a good deal of general apprehension had been already discounted by the decline since the Eastern war began, that evidence of continued prosperity and trade activity continued to come in, and that the steel trade headquarters, of all places in the world, expressed equanimity over the tariff outlook.

As regards the seemingly unreasonable action of Europe's stock exchanges, during the critical hours when Continental Ministries, with Bulgaria's troops on the road to Constantinople, were matching ultimatums against one another, there are two things to say. One is, that the European bankers, who were hurriedly turning their gilt-edged securities into cash when they looked for a prolonged and expensive Balkan war, had reason on general principles to take them back on evidence that the war would be quickly ended. The other is that European high finance knew that Austria cannot fight alone, with its own race problem on its hands, and that the Balkan allies, who must have nearly exhausted their original supplies of money during their short but strenuous campaign, and who cannot easily raise more for a long campaign, would never tempt Europe to prolong the expensive fighting.

Perhaps what puzzled Wall Street most of all was the downward reaction of prices here, with heavy domestic selling, which on each successive day, last week, followed London's early and substantial purchases. Perhaps this event is best explained by recalling the story of October. Forty or fifty millions' worth of American securities were suddenly dumped by Europe on New York in the middle of that month.

When the share certificates arrived here, a week or two after October 12, they were not thrown helter-skelter into the open market for whatever they would bring, but were cared for by banking interests which could borrow the necessary funds. Now that financial Europe, having recovered from its fright, had begun to buy again in New York and was thereby sustaining prices on our Stock Exchange, it was the perfectly natural policy of such bankers to sell, so far as the market would take it, what was left of the stocks sent back last month by Europe.

But as to what the attitude of the markets will be in the next few weeks or months regarding the tariff controversy, the Balkan terms of peace, or the American investment outlook, the course of events this week can hardly be taken as conclusive. In all three directions there is a chance that actual news will change the face of things. Some actual announcement as to the new Administration's plan will soon be due. The real discussion as to the fate of Turkey has only begun. We are probably entering something like a secondary stage in the American trade revival—which, as it happens, will scarcely be said to have yet found anything like the usual reflection on the Stock Exchange.

BOOKS OF THE WEEK.

STUDIES IN

THE PSYCHOLOGY OF INTEMPERANCE

By G. E. PARTRIDGE, Ph.D.

Author of "The Nervous Life," etc.

A book for physicians, sociologists, and all interested in the care or cure of those addicted to drink, and in intemperance as a social problem.

Basing his conclusions mainly on a study of the mental state—the whole psychology—of the hard drinker, the author seeks help and cure for the intemperate along the social, educational, and psychological lines here laid down. A book rich in practical suggestions that draws on the latest scientific knowledge, and on original investigation.

THE DIARIES OF

William Charles Macready

1833-1851

Edited by WILLIAM CHARLES TOYNBEE

Author of "Vignettes of the Regency."

8vo. 2 vols. With 49 Full-page Illustrations, $7.50 net. Carriage, 50c.

This exceedingly valuable and interesting personal record of the stage career of one of the greatest actors contains a great deal of material hitherto withheld from publication. In a style full of candor, the author speaks of the stage rivals and illustrious contemporaries with whom he came into contact.

TYPEWRITING For Authors, 40c. per 1,000 words
Jack Liverpool, 7 BerwickPk., Boston

Pride of War

Translated from the Swedish of Gustaf Janson

Sets its author at once among the greatest writers of Europe. —*Athenaeum* (London).

It may be doubted whether the physical actualities of modern warfare have ever been so hauntingly portrayed by any author before.—*London Daily News.*

The peace propagandists will miss the most telling argument that has been made in their favor in a long time if they do not give to "Pride of War" a wide circulation.

—*New York Times.*

350 *pages. Cloth,* $1.30 *net; by mail,* $1.42.

FOOD
IN HEALTH AND DISEASE

By N. S. DAVIS, Jr., M.A., M.D.

Northwestern University, Chicago.

Octavo. Cloth $3.50 Postpaid.

The first part of this book reviews the underlying principles concerning the nutritive and other qualities of different kinds of foods, discusses briefly their relation to the digestive organs, and traces the changes that food must undergo before it can be appropriated to the needs of the human system. This is followed by detailed consideration of the proper diet indicated for the various conditions of health and disease, each condition being taken up seriatim with concise, plain directions, and diet lists.

A descriptive circular with list of contents will be sent upon request.

NOTABLE NEW BOOKS

Reminiscences of a Diplomatist's Wife

By MRS. HUGH FRASER

Author of "A Diplomatist's Wife in Many Lands."

Another volume of reminiscences of court and diplomatic life of four continents, from that same accomplished sister of Marion Crawford, who has already given the literary and artistic world two delightful volumes of interesting and witty gossip.

"If everyone enjoys Mrs. Hugh Fraser's 'A Diplomatist's Wife in Many Lands' as much as I have," said the noted critic, Miss Jeannette L. Gilder, "the book will be one of the most popular of the season." Enough readers have enjoyed it to make it one of the most popular books of its kind for two seasons.

Illustrated. $3.00 *net. Postage* 20c. *extra.*

A Miscellany of Men

By G. K. CHESTERTON

Every new volume of Chesterton's essays seems more brilliant, breezily humorous, and astonishingly clever than the last. Nor must one hastily conclude that the author is not profound because he is constantly witty and frequently funny. On the contrary, he reasons admirably and sees keenly and justly. And this combination of snap and sparkle with underlying solid sense makes him peculiarly attractive to clever people.

$1.50 *net. Postage* 14 *cents extra.*

Rhymes of a Rolling Stone

By ROBERT W. SERVICE

Author of "The Spell of the Yukon"
"Songs of a Sourdough."

Virile poems of the Sub-Arctic, by the author of "The Spell of the Yukon," a volume of poetry of which 150,000 copies have been sold.

A ROLLING STONE

THERE'S sunshine in the heart of me,
My blood sings in the breeze;
The mountains are a part of me,
I'm fellow to the trees.
My golden youth I'm squandering,
Sun-libertine am I:
A-wandering, a-wandering,
Until the day I die.

A book for men and women who love the big out-of-doors.

$1.00 *net; postage* 10c. *extra.*

THE BEST BOOKS FOR HOLIDAY GIFTS

New Fiction

"Friar Tuck is assured a large popularity," says the *Boston Transcript.*

FRIAR TUCK

THE BIG NOVEL OF 1912

Being the Chronicles of the Reverend John Carmichael, of Wyoming, U. S. A., as set forth and embellished by his friend and admirer

HAPPY HAWKINS

and here recorded By ROBERT ALEXANDER WASON

author of "Happy Hawkins," "The Knight-Errant," etc.

"Out of the West comes a Lochinvar of story-tellers to bear his readers once more 'beyond speed limits and grass signs to where life has ceased to be a series of cogs and—a man is still a man.' To those who like Western 'yarns' for their refreshing dissimilarity to their own environment and to those who still like to read aloud, 'Friar Tuck' is to be commended. Mr. Wason has the gift of naturally humorous expression and 'Friar Tuck' is assured a large popularity."—*Boston Transcript*

"'Thank the good Lord for Wason!' exclaimed one of Brooklyn's most noted divines a few evenings ago, as he read, with a deep sigh of regret, the last paragraph of 'Friar Tuck.' So say we all of us! A great story, a delight and a glory!"—*Brooklyn Citizen.*

"The book is unique, dramatic, and intensely human. It surpasses 'Happy Hawkins' and proves that Mr. Wason is one of those genuine humorists who have analyzed the wayward heart of man."—*Rochester Post-Express.*

"In all its qualities of soul and body, in its spirit and expression 'Friar Tuck' is most decidedly American—according to the word's best meaning."—*Chicago Inter-Ocean.*

MARY, MARY

By JAMES STEPHENS

The distinguished Irish poet here gives us his first novel, told in a new way, a way of genius. Charm and whimsical humor overflow on every page.

"The sort of story for which we have long been looking; it has brought a new grace to the season's fiction. It is one of the most exquisite books we have read in years."—*New York Times.* $1.20 *net; by mail,* $1.35

ZEBEDEE V.

By EDITH BARNARD DELANO

The humorous tale of a natural-born promoter who stirs a little Maryland village by taking unto himself a third wife. What she does with Zebedee V. Slocum makes the sunniest kind of story. Illustrated. $1.20 *net; by mail,* $1.35.

THE SECRET OF FRONTELLAC

By FRANK K. SCRIBNER

An absorbing mystery story of two enterprising Americans in a French chateau. Frontispiece. $1.25 *net; by mail,* $1.40.

The Novels of Ethel Sidgwick

PROMISE

$1.35 *net; by mail,* $1.50.

LE GENTLEMAN: An Idyll of the Quarter

$1.25 *net; by mail,* $1.40.

HERSELF

Frontispiece in color by Carton Moorepark. $1.35 *net; by mail,* $1.50.

"Miss Sidgwick possesses the true imaginative gift, as distinguished from the mere power of vivid reporting, which is the necessary qualification for continuing to produce work of permanent value in fiction."—*London Times.*

"Only a novelist of high powers could have created Antoine, old M. Lemaure, Jem Edgell, Alexander Fergusson, and Harriett Clench."—*New York Sun.*

The Great Art Gift-Book of the Year

ART

By AUGUSTE RODIN

(Translated from the French of Paul Gsell by Mrs. Romilly Fedden)

With 106 illustrations in photogravure and half-tone. Large quarto. Boxed. Buckram, **$7.50** *net;* three-quarter levant, **$15.00** *net;* carriage additional.

A book which takes its place at once as the most important art book in years. It is written in the form of conversation, and the greatest of modern sculptors discusses freely not only his own art, but also art in general, painting no less than sculpture, with a spontaneity and charm seldom found in books written more conventionally.

It covers practically the whole range of art and abounds in memorable analyses of the works of the masters of painting and sculpture, ancient and modern.

Important Non-Fiction

THE POPE'S GREEN ISLAND

By W. P. RYAN

"The best book on Ireland ever written by an Irishman." A survey of present-day Ireland of vital interest to millions of Americans. 8vo. $1.50 *net; by mail,* $1.65.

THE BAYREUTH LETTERS of RICHARD WAGNER

Edited and Translated by CAROLINE V. KERR

An indispensable book for the Wagner lover, telling the fascinating story of the great composer's struggles for the Festival Theatre at Bayreuth, treating of the years just subsequent to the period covered in the recently published autobiography. Illustrated. 8vo. $2.50 *net; by mail,* $2.70.

MASTER PAINTERS

By STEWART DICK

This most readable volume gives an interesting account of the lives of the famous painters of the world. 12mo. Illustrated. $1.25 *net; by mail,* $1.40.

WHO'S WHO IN THE THEATRE, 1912

Edited by JOHN PARKER

Biographies of over 500 actors, actresses, managers, playwrights, critics, etc., American, English, British Colonial and Continental; an invaluable work. 8vo. $2.50 *net; by mail,* $2.70.

THE EMPIRES of the FAR EAST

By LANCELOT LAWTON

A masterly study, by an English journalist and publicist, of Japan and her Colonial possessions, of China and Manchuria, and of the political questions of Eastern Asia and the Pacific. Two volumes. Boxed. 8vo. Per set, $8.50 *net; carriage additional.*

PLAY-MAKING

A Manual of Craftmanship

By WILLIAM ARCHER

"This book has long been desired," says the *Bookman,* "and there is no man in the world better equipped to write it. Students of the drama may derive from it a sane reckoning of where the truth of dramatic art lies. Further it is admirably what its title claims for it, and should be of genuine value to the playwright. Not often may we find a subject so well and comprehensively discussed."

"It is, moreover, as suggestive to the play-goer as to the play-maker," says the *Boston Transcript.* 8vo. $2.00 *net; by mail,* $2.15.

THE STORY OF NELL GWYN

By CECIL CHESTERTON

A fascinating and beautiful volume by a brother of Mr. G. K. Chesterton. 12mo. Illustrated in color and black and white. $1.00 *net; by mail,* $1.10.

FLOOR GAMES

By H. G. WELLS

The versatile English novelist here shows his skill in dealing with children. Every house should have a floor on which games can be played, he says, and he shows the games to play. Over 100 illustrations. 4to. $1.00 *net; by mail,* $1.10.

IN FORBIDDEN CHINA

By VISCOUNT D'OLLONE

The spirited account of the adventurous exploring expedition of the French Government into the highlands of Western China among an almost unknown and still unconquered people. The narrative has the charm of the unfamiliar. 146 illustrations, map, 8vo. $3.50 *net; by mail,* $3.80.

TRIPOLI THE MYSTERIOUS

By MABEL LOOMIS TODD

A charming and informing record of personal observation, especially timely. Profusely illustrated. 8vo. $2.00 *net; by mail,* $2.15.

HOUGHTON MIFFLIN COMPANY'S
Important New Books

Italy in the Thirteenth Century

By HENRY D. SEDGWICK. An important contribution to the field of Italian historical scholarship, as readable and interesting to the general reader as it is sound and authoritative. It will appeal strongly both to those specially interested in Italy and her development and to those interested in the larger aspects of the history of European civilization. In two volumes. Illustrated. $5.00 *net.* Postage 32 cents.

Humanly Speaking

By SAMUEL M. CROTHERS. Delightfully whimsical essays in which the author of "The Gentle Reader" travels, observes, and arrives at certain interesting conclusions. $1.25 *net.* Postage 12 cents.

A Dome of Many-Coloured Glass

By AMY LOWELL. "All of these poems have a pure lyrical quality that is most alluring and the variety in the verses is remarkable."—*Buffalo Express.* $1.50 *net.* Postage 6 cents.

The Autobiography of an Individualist

By JAMES O. FAGAN. Of the many new writers who have ventured into the field of sociological and economic discussion in the last few years few have attracted so much attention or won so wide and receptive a hearing as Mr. Fagan. His "Confessions of a Railroad Signalman" and "Labor and the Railroads" met with unusual interest, and this volume bids fair to prove one of the most significant publications of the year. $1.25 *net.* Postage 11 cents.

The Three Brontes

By MAY SINCLAIR. "Nowhere, not even in the book by Mrs. Gaskell, has so fine a novelist made so fine a biographer."—*G. K. Chesterton.* Illustrated. $3.00 *net.* Postage 18 cents.

Americans and Others

By AGNES REPPLIER. "A true essayist . . . 'Americans and Others' is a book of prose for which we may well give thanks."—*N. Y. Times Saturday Review.* $1.10 *net.* Postage 11c.

The Poems and Plays of William Vaughn Moody

At his untimely death two years ago it was clear to all of Mr. Moody's readers that a poet of first consequence had been lost to our literature. His complete works are now published for the first time in two volumes with frontispiece portraits in photogravure and a biographical Introduction by John M. Manly. Each vol. $1.50 *net.* Postage 14 cents.

Emerson's Journals

Vols. VII. and VIII. These two volumes comprise the period from 1845 to the early fifties. Among the illustrations are the portraits exchanged by Carlyle and Emerson in 1847, and those of several of his new friends. $1.75 *net* a volume. Postage 13 cents.

Poems of Frederic and Mary Palmer

One section of this volume is entitled "Old Lovers' Ways," and others contain verses on nature and various occasions, in Andover, Boxford, and Wellfleet. In them, situations which are ordinary and universal are shown as the home of romance and the gate to the divine. $1.00 *net.* Postage 8 cents.

The Rhodes Scholarships

By GEORGE R. PARKIN. Mr. Parkin, who is the Secretary of the Rhodes Scholarship Trust, has aimed in this able and interesting book to provide a permanent handbook of this perpetual Trust which will be both of service to prospective applicants for the Rhodes Scholarships, and to those that select them, and of interest to the general public. Illustrated. $2.00 *net.* Postage extra.

The Family

By JAMES Q. DEALEY. "It is a pithy, wise little volume, every sentence well pondered, and expressing ripe scholarship and sound judgment."—*E. A. Ross, Professor of Sociology in the University of Wisconsin and author of "Changing America."* 75 cents net. Postpaid.

Readings in American Constitutional History

Selected and Edited by ALLEN JOHNSON. A collection of material, not accessible in any other single volume, carefully grouped and edited so as to enable students to deduce the leading principles of American constitutional development. $2.50 *net.* Postpaid.

Capitalization
A Book on Corporation Finance

By WALTER H. LYON. "A practical manual for the use of young bankers and those who wish to learn the machinery of investment."—*N. Y. Sun.* $2.00 *net.* Postpaid.

Intimations of Immortality in the Sonnets of Shakspere

By GEORGE H. PALMER. "Add not a little both to our conceptions of Immortality and to our knowledge of Shakespeare. . . . An illuminating lecture."—*Boston Transcript.* 75 cents *net.* Postage extra.

"ONE OF THE WONDERFUL BOOKS OF ALL THE YEARS."—*Jacob A. Riis.*

Mary Antin's The Promised Land

"The life-story of an eager, observant, reflective, aspiring, and always original young woman whose formative years have been divided between the stifling restrictions of the 'Pale' and the glorious freedom of America."—*Percy F. Bicknell* in *The Dial,* Chicago.

"Told with a picturesqueness, a distinction, and a poetic touch that make it as interesting as the best fiction."—*William H. Maxwell* in *The Literary Digest.*

"A real book. . . . Let us say that it is a book which no American can afford to miss; and which no friend of beauty will care to put down."

—*New York Sun.*

Illustrated. $1.75 *net.* Postage, 15 cents.

Hygiene for the Worker

By **WILLIAM H. TOLMAN, Ph.D.**, Director American Museum of Safety, New York City, and **ADELAIDE WOOD GUTHRIE**, Department of Research, American Museum of Safety.

50 cents

This book is based upon actual shop conditions and discusses helpfully matters of personal appearance, cleanliness, and general care of the body, with suggestions for a regular morning and evening routine; the value of food and drink and a plain talk on the subject of alcohol and tobacco. In the belief that Tolman's Hygiene for the Worker will benefit employee and employer alike, the National Cash Register Company has ordered 1,000 copies for distribution among its workers. What the book will do for them it will accomplish in other places of business—manufactories, department stores, or any other institutions where numbers of workers are employed. Sound health means efficiency: improved health, increased efficiency.

PUBLISHED BY THE MACMILLAN COMPANY 64-66 FIFTH AVE. NEW YORK

THE GIRLHOOD OF QUEEN VICTORIA

A Selection from Her Majesty's Diaries between the Years 1832 and 1840

Edited by VISCOUNT ESHER.

2 *Vols. With* 34 *full-page Illustrations. Medium* 8*vo.* (*Uniform with "Queen Victoria's Letters."*) $9.00 *net* (*Express extra*).

The Diary kept by Queen Victoria in her girlhood is an intimate revelation of her interests, activities, and various accomplishments, and above all, of the growth of her mind and character. She records the conversations of Lord Melbourne with the care and accuracy of a Boswell, and from them we can see how the Prime Minister and Courtier was training his Sovereign day by day in the art of statesmanship.

Of the illustrations, some are reproductions of the Queen's own drawings, others are portraits specially painted for her, and never hitherto reproduced. This artistic embellishment to a unique book is a most attractive feature.

Arthur James Balfour As Philosopher and Thinker

A collection of the more important and interesting passages in his non-political writings, speeches, and addresses, 1879 to 1912. Selected and arranged by WILFRID M. SHORT.

With Portrait. 8*vo.* $2.50 *net.* (*Postage* 16 *cents.*)

The Life and Letters of Frederic Shields, A.R.W.S., 1833-1911

Edited by ERNESTINE MILLS.

A biography of the well known painter of religious subjects. *With Photogravure and* 40 *other Illustrations.* 8*vo.* $3.00 *net.* (*Postage extra.*)

Cardinal Manning, and Other Essays

By J. E. C. BODLEY

Corresponding Member of the Institute of France. *With Frontispiece.* 8*vo.* $3.00 *net.* (*Postage extra.*)

Railroads

By WILLIAM Z. RIPLEY, Ph.D.,

Ropes Professor of Economics, Harvard University. Sets forth the nature of the railroad problems of the time, commercial, fiscal, and political, in a way to appeal to the serious general reader as well as to the specialist. *In* 2 *Vols. Small* 8*vo.*

VOL. I. RATES AND REGULATION. *With* 41 *Maps and Diagrams.* $3.00 *net; by mail,* $3.20.

Boyd Alexander's Last Journey

With a Memoir by HERBERT ALEXANDER

The diary of the great African traveler, written up to within a week of his murder on his adventurous scientific journey a few months ago.

8*vo.* $3.50 *net.* (*Postage* 17 *cents.*)

A Survey of English Literature, 1780-1830

By OLIVER ELTON

A critical review in a historical setting rather than a mere history, by the Professor of English Literature in the University of Liverpool. The book is above all a series of personal impressions of artists and of their works.

In 2 *Vols.* 8*vo.* $6.00 *net.* (*Expressage extra.*)

Miriam Lucas

By CANON SHEEHAN

"Canon Sheehan has a fine capacity for presenting Ireland's people in all their humor, loyalty, wit and suddenness. Miriam Lucas is a noteworthy novel of modern Irish life." —*Syracuse Post Standard.*

Crown 8*vo.* $1.35 *net; by mail,* $1.50.

The New Book of Golf

Edited by HORACE G. HUTCHISON

"It is an authoritative book that will be read with interest by all golfers."—*N. Y. Sun.*

With 67 *full-page Illustrations. Crown* 8*vo.* $2.00 *net.* (*Postage* 12 *cents.*)

John and Irene

By W. H. BEVERIDGE

A selection of sayings from many times and countries concerning woman in all her aspects. The quotations are arranged by subjects, and are further arranged so as to illustrate a modern love story told in the Introduction.

Crown 8*vo.* $1.40 *net.* (*Postage* 10 *cents.*)

The Book of Saints and Heroes

Edited by ANDREW LANG

In Mr. Lang's 24th annual Christmas book the subject-matter is drawn from the wealth of mediaeval Christian legend. Each of the 23 chapters is devoted to the story of some saint around whose life a fabric of miraculous detail has gradually been woven, and older children will here be introduced to those whose names are familiar to us, and some whose names are not so familiar. A preface explains in a form suitable for youthful readers how all these ancient and famous legends first grew up.

With 12 *Colored Plates and* 18 *full-page Plates in Black and White by H. J. FORD. Small* 8*vo. Gilt top.* $1.60 *net; by mail,* $1.75.

Alpine Studies

By W. A. B. COOLIDGE

Contains some 20 articles, largely on Climbing matters, and describing many parts of the Alps from the Higher Maritimes to the Tyrolese Dolomites, especially the Dauphine and Bernese Oberland ranges.

With 16 *Half-Tone Illustrations.* 8*vo.* $2.50 *net.* (*Postage* 13 *cents.*)

Books and Bookmen

By ANDREW LANG

Pocket Edition. With a Preface specially written for this New Edition. *Fcap.* 8*vo. Cloth, gilt top,* $0.75 *net. Leather,* $1.00 *net.* (*Postage extra.*)

A Staff-Officer's Scrap-Book During the Russo-Japanese War

By General Sir IAN HAMILTON

New Edition in 1 Volume. With all the Original Maps and Plans, and a Frontispiece.

Large Crown 8*vo.* $2.10 *net.* (*Postage* 17 *cents.*)

ROYAL GARDENS

By CYRIL WARD, B.A.

Illustrated with 32 *full-page Color Reproductions from Original Water Color Drawings by the Author, and five Plans.* 4*to.* (11⅞ x 8½ *in.*) $5.00 *net.* (*Expressage extra.*)

Eleven of the most famous and beautiful gardens in Great Britain are here reproduced in full color. The chapters are so arranged that the accompanying plates present a full garden year from daffodils at Windsor Castle and spring flowering shrubs at Bagshot Park to chrysanthemums at Claremont, and autumn flowers at Sandringham; and the gardens herein depicted include examples of the whole art of garden design as practised in Great Britain during the last three or four centuries. There are also six articles written by head gardeners on their own methods, and on particularly notable trees, shrubs, and plants in the Royal gardens under their charge, that will be found useful by many garden lovers. A suitable holiday gift book.

The Nation

NEW YORK, THURSDAY, NOVEMBER 28, 1912.

The Week

Both Gov. Wilson and Mr. Bryan are hopelessly ignorant about the new Cabinet, as compared with the Washington gossips. The latter had it all arranged, with Bryan already appointed Secretary of State, and, furthermore, empowered by Wilson to fill all the other Cabinet positions. This last was evidently put forth as a supreme test of gullibility. If anybody believed that part of the story, he certainly would not stick at the rest of it. But the whole was an invention, as is proved by the explicit denials of the two principals. It served to pass the time for a single day, and also to elicit expressions of a strange feeling of apprehension in case Bryan should be named as President Wilson's "premier." This seemed to be partly a fear lest Bryan, as Secretary of State, might do something to derange the finances. It appears to have been thought that he would negotiate secret treaties for the international free coinage of silver, or something of that kind. But this was to forget that Mr. Bryan always scorned the idea of waiting for other nations, and proudly announced his determination to go his bimetallic way without their "consent." But the main cause of alarm was lest Bryan should be put in a position to "run" the new Administration. It was not perceived that he would be much more likely to attempt this outside than in, just as he undertook to "run" Mr. Underwood and the Democratic majority in the House, with results highly damaging to his prestige. Inside the Cabinet, Bryan would have to be loyal or quit. And anybody who thinks that Woodrow Wilson could be "run" by Bryan or anybody else, has yet a lot to learn.

In appointing Theodore Marburg as Minister to Belgium, Mr. Taft has given fit recognition of attainments and services in private station. Mr. Marburg is a serious student of, and writer on, economic and political questions, and has been one of the chief promoters, in this country, of the movement for the peaceful settlement of international disputes. He has spent much time in Europe, and pursued his studies for two years at the Ecole Libre des Sciences Politiques in Paris. His interest in art, as well as in the improvement of municipal government, has been of benefit to his home city, Baltimore; and in this and other ways he is equipped to represent the country creditably at Brussels.

Mr. Carnegie's proposal to provide, through the Carnegie Corporation, a pension of $25,000 a year for "future" ex-Presidents was intolerable. The truth is that some people are worrying more about the pecuniary affairs of ex-Presidents than are the ex-Presidents themselves. We think it was Mr. Cleveland who, after his retirement from the Presidency, referred to the so-called problem of what to do with ex-Presidents, and said that his solution of it was to let them alone. Mr. Roosevelt has expressed himself similarly. As a matter of fact, there has been no real difficulty on the score of ex-Presidents not being able to live with dignity. None of them has fallen into penury. If such a mischance should occur to any former President, there can be no doubt that Congress would come forward with a special act in relief. It already pensions the widows of ex-Presidents. Most men who leave the Presidency do so either with private means sufficient for their needs, or with health and powers enabling them to earn what they require. Americans are eager to think well of their ex-Presidents and to treat them well. But they know no better way to do this than to welcome them back into the general body of citizenship. It is a great honor to have occupied the Presidency. But to lay down that honor with simple dignity, and then in unaffected simplicity to take up the burdens of life and of civic duty, as one democrat among his fellows, this, too, is a high distinction.

Senator Root's strong talk in favor of a fair and honest course upon the Panama Canal tolls, at the Chamber of Commerce dinner, was received with hearty and unanimous applause. This manifestation of sentiment, on the part of an assemblage thoroughly representative of the business community of New York, is most gratifying. Upon the merits of the toll question itself, as related to the Hay-Pauncefote treaty, no man in the country can speak with greater authority than Mr. Root; but even if we were to waive the weight of that authority, as well as what to the ordinary mind seems to be the plain meaning of the treaty itself, there could still be no answer to the position asserted by the Senator on the subject of the arbitration of the question. If we were to refuse to submit it to the decision of an international tribunal, we should reduce to absurdity and contempt our whole attitude in reference to the promotion of the settlement of international disputes by arbitration. And, owing to the peculiar character of the subject-matter—a question of pecuniary detail—a worse taint even than this would attach to our conduct. "I say to you," said Mr. Root, "that if we refuse to arbitrate it, we shall be in the position of the merchant who is known to all the world to be false to his promises."

Speaking of the Anti-Trust law, at the dinner of the Investment Brokers' Association of America last Friday night, Mr. Frank Turnbull, chairman of the board of directors of the Chesapeake & Ohio Railway Company, emphasized an aspect of the matter to which singularly little attention has been paid. "All of us know," he said, "that hundreds of thousands of combinations would have been formed if it had not been for the Anti-Trust law and for the prosecutions under it." The expression "hundreds of thousands of combinations" may not best fit the case; but what Mr. Turnbull had in mind was the tremendous enlargement which the process of combination would have exhibited had it not been for the obstacle interposed by the Sherman act. It is impossible to estimate how much further we should have gone, by this time, on the road to monopoly, if the country had accepted the doctrine of the manifest-destiny people instead of doggedly sticking to its determination to block the process. And the gain that has come from this policy cannot be measured by its direct results upon industry or trade. Far more important than that is the effect upon the whole economic and political structure of the country; for it is unquestionable that, as Mr. Turnbull says, the movement towards state socialism would have been greatly accelerated if there had been no Anti-Trust law.

The death of Senator Rayner brings to a close a political career of a somewhat singular kind. While not an aggressive reformer, he resented and resisted the dominance of the Democratic machine in Maryland, and his election to the Senate nine years ago was won by an appeal to the people against the dictum of that machine. His fight "within the party" against the notorious Poe disfranchising amendment was one of the chief factors in bringing about the decisive defeat of that measure. Though a strict Constitutionalism was almost a religion with him, he was an early advocate of what are now called Progressive policies, having favored, during his service in the House many years ago, both the popular election of Senators and advanced measures in the interest of workingmen. In his recent career, his determined championship of the general arbitration treaties in their fullest scope is particularly notable. He will be missed upon the Democratic side of the Senate as one of the small group of men whose speeches, upon important occasions, were such as to attract national attention. The gap in the Democratic ranks in the Senate caused by his death is of peculiar importance from the mere standpoint of numbers, owing to the close division of the parties and the circumstance that the Governor of Maryland, who will have the making of the interim appointment, is a Republican. Moreover, in the leading question of the tariff, Senator Rayner would have been a great help in putting through the Democratic policies.

Our disregard for human life is brought to the front again by a report made to the Federal Bureau of Labor regarding lead poisoning in potteries, tile works, and the like. Compared with British establishments of this sort, our own, with less than half the number of workpeople, show almost twice as many cases of lead poisoning. Nor do these unfavorable figures tell the whole story, since, in the absence of legal requirements for the recording of such cases, it has been found impossible to make a complete census of them for the two years covered by the investigation. The salient point in the report is that foreign potteries and tile works recognize the handling of lead glaze as a dangerous trade. Consequently, means of such protection are provided, ranging from clean, washable work clothes to a monthly medical examination. All of these methods, says the report, could be introduced into our potteries without necessitating any change in the processes of manufacture. In certain branches of the industry as managed in Europe, leadless enamels are generally used, and they are believed to be superior in durability to those in which lead is used, while free from the dangers of the latter.

The principles of industrial unionism were brought up in the convention of the American Federation of Labor last week and were beaten 2 to 1; but considering the brief history of the industrial agitation within the Federation, the showing is really notable. Roughly speaking, industrial unionism would organize the working class along vertical lines instead of on horizontal lines. Its unit is the industry instead of the trade or craft. Under the present horizontal or craft system, there is a nation-wide Teamsters' Union, made up of draymen engaged in numerous industries. Under the industrial or vertical system, the truckman who regularly carts building steel would be a member of a union comprising every class of worker in the building industry, and the truckman who regularly carts coal would be in affiliation with the miners' organization. Such at least is the theory. Industrial unionism has been developed as a consequence of the rivalries and conflicts among trade unions in the same industry, or sometimes among unions in the same trade. The so-called "jurisdictional" conflicts have weakened the unions internally and before the public. Unions in the same industry have struck against each other to decide whether a certain task falls within the jurisdiction of this or that narrowly circumscribed craft.

The acquittal of Ettor, Giovannitti, and Caruso at Salem Tuesday morning brings to a close one of the most remarkable trials of recent years. Few persons who have followed it and are acquainted with all the attendant circumstances will, we believe, be other than pleased at the outcome. This does not mean that we in the slightest degree sympathize with the Industrial Workers of the World or with their propaganda of violence. It does mean that the prosecution seemed to us from the beginning far-fetched, and the evidence against the prisoners flimsy. So many mistakes were made by the authorities in the handling of the whole Lawrence strike that there was genuine danger of sending these men to the electric chair when they were innocent.

The football season just ending shows, as usual, a long list of dead and injured. Yet it would be unfair to those who have worked over the rules not to add that substantial progress has been made both in improving the game itself and in safeguarding the players. Officials, too, have been stricter than usual in penalizing rough play. The chief contests of the season have been far more interesting than those of past years, and not only because of the frequent drop-kicking. The Harvard offence on Saturday was amazingly varied, if one contrasts their style of play with that in vogue five or six years ago, when the only question was which side by sheer brute force would oftenest shove the ball through the opponent's line and down the field. The big games this year have literally been *football*, and the stars of the season are chiefly the men like Brickley and Pumpelly. At New Haven there were pretty gains through broken fields, and some good end running which brought the spectators to their feet and resulted in one touchdown. There were plenty of tricks and criss-cross passing to add to the variety of the play, as well, and to show that the game has been opened up.

But there is still much to be done towards safeguarding the individual. It ought not, for instance, to be possible for charging players to knock down some of their opponents in the backfield yards away from the actual play. Indeed, the question is whether the next forward step should not be to take another leaf out of the Rugby book and make it impossible for the interference to precede the runner. This is one of the radical differences in the two games, so radical that the suggestion of the change will doubtless meet with little favor at first. Yet it is a subject about which there should be prompt and full discussion. There is a growing belief among the more conservative football men that some move in this direction must be made ere long. The coaches can give help, if they will, by punishing their own players who indulge in unnecessary roughness and by ceasing to teach on the theory that brute force is everything. The Dartmouth team has been held up to opprobrium by the Harvard head coach for its roughness, and similar outspokenness about other players who forget to be gentlemen is desirable. When all is said and done, however, the risks of the game can only be minimized and not wholly removed. There must always be some violent physical contact, and that spells injury, however hardened and trained the players may be.

All Harvard is rejoicing over its discovery of the insect which carries the virus of infantile paralysis. Indeed, were the world not dulled to such achievements the press everywhere would be ringing with the news. The offender, be it noted, is none else than the common stable fly. Its detection by a process of elimination took endless skill and science, and was the result of the co-operation of the Harvard Medical School, the Bussey Institution of that University, and the Massachusetts State Board of Health. This pulling together of three separate bodies of scientists is peculiarly gratifying, foreshadowing as it does greater coördination than has been possible in the past, while the exploit itself must redound to the honor of Harvard throughout the world—even though it has attracted but a trifling amount of space in the press compared to that attained by the football team. That the offending carrier has been found does not mean, alas! that a cure for this dread disease is in sight—only that it may be guarded against as never before. For the disease itself science does not at present hold out any prospect of a cure.

MILWAUKEE, Wis., November 20.—A summary of hunting accidents in the Northern woods to date shows that the total of fatalities and serious accidents since September 1 breaks all records.

We had been under the impression that the gentle pastime of killing men by mistake for deer was somewhat declining in popularity. If it is in such flourishing condition as to "break all records," it should seem to be quite deserving of a little prayerful consideration. In these days of searching of the national heart, it would certainly be in order to inquire whether these killings of men mistaken for deer are as familiar an incident of life in other countries as they are in ours. And if not, it is quite worth while to inquire why not. The habit of referring every wrong and every evil to some defect of our laws or our administration of them has been growing upon us at an extraordinary rate, and it is greatly to be desired that we should not altogether lose sight of the part played by the temper, mental attitude, and habits prevailing among the individuals who make up the nation. In all sorts of ways the ordinary American lightly takes chances which the people of other countries are far more particular to avoid. Our unenviable eminence in fires, mine accidents, railway accidents, etc., is not due wholly to governmental deficiencies.

It was so soon evident that the violent scenes in the House of Commons would have no political effect that it has hardly seemed worth while to recur to the subject. Its moral implications, however, were strikingly revealed in the mass of English comment at the time. As was to have been expected, Prof. A. V. Dicey, though a convinced Unionist, could not approve the rowdy tactics of his party in the Commons. He has too long championed law and order in Ireland to see them trampled upon in Westminster itself without a protest. He gave it as his opinion that a repetition of the senseless disorder in the House would ruin the cause of the Unionists. To this it was rejoined that the party leader, Mr. Bonar Law, was never so uproariously acclaimed by his followers as when he went to Albert Hall, the day after the rioting in the House, and gloried in it. But it is evident that both he and his party became ashamed of their defiant and lawless attitude, and soon abandoned it. This whole Conservative outbreak was aptly named by the *Westminster Gazette* "Unionettism." It was a double-barrelled epithet to discharge at the men who had lifted horrified hands at the violent tactics of the militant suffragists.

A Papal encyclical on labor unions and social questions appears to have leaked out prematurely in Germany, and is there the subject of much comment. The drift of it is, so far as one may judge from the fragments published, that it is not possible to sever from religion the matters of social concern now so much agitated among workingmen. They are so related to morals and the whole modern order of society that the Church cannot be asked to keep hands off. The Pope lays no ban upon labor unions. So far as they are composed of Catholics, his word is that they are both to be upheld and enlarged. But he disapproves of Catholics and non-Catholics coming together in the same union. The Papal idea is that the Church must keep a strong directing hand upon all these activities and movements. No less would have been expected of Pius X.

An international Socialist Congress, comprising 450 delegates from twenty countries, assembled at Basel on Sunday for the purpose of reasserting the opposition of the Socialist party to militarist ideals, and specifically to prevent the development of the Balkan war into a general European conflict. It is true that, in threatening to meet violence with violence, the Socialist leaders are guilty of inconsistency. An armed insurrection against war would lead to the bitterest of all kinds of war, civil strife. It is true also that the spirit of social hatred that is the real driving force of Socialism might at any moment be transmuted into international hatred. Nevertheless one of the unmistakable factors that contribute to the growth of Socialist prestige in Europe is the loud opposition which that movement has repeatedly expressed against the waging of offensive wars. One has only to think of the now familiar tales of horror that are coming out of the Balkans, of carnage and pestilence working hand in hand, of burning villages and slaughtered women and children, to see how the better conscience of Europe would rally in sympathy to the party which really meant that an end should be made of settling international quarrels through the brutal decisions of war.

FOREIGN VIEWS OF WILSON.

Telegraphic dispatches on November sixth gave us a general idea of the comments of the foreign press upon our Presidential election. But as the French and German and English newspapers have been coming by mail, reading of their editorial views gives opportunity for a fuller understanding. The significance of the Republican defeat and of the failure of Roosevelt is variously interpreted; and the forecasts of future party alignments differ. But in one respect there is something like a consensus. This lies in the judgment formed of Woodrow Wilson. His success is, of course, primarily regarded as that of the Democratic party, but over and above this a great deal of emphasis is laid upon his personality. His election had long been held certain by instructed political observers in Europe, as it had been here, and thus they had had time to make up their minds concerning the man, and also about the meaning of his coming to the Presidency.

All of them speak of him as a "new" man. This is not intended in the old Roman sense of a *novus homo*. It means that Wilson is of a type new in the higher American politics. The *Westminster Gazette* suggests this in the very title of its article on the election, namely, "The College President." It speaks of "this experiment of the 'philosopher-king' made in the unlikeliest quarter of the world." This at once conveys the point. Europe is familiar with public men taken from the universities. Oxford has long been the cherishing mother of statesmen. But foreigners are more vividly aware than many Americans seem to be how great a novelty it is in the United States when, as the *Westminster Gazette* puts it, "the learned historian, professor, and ex-college principal walks into the White House." We here, closer by, give more attention than the foreigners do to Wilson's brief period of transition. He did not go straight from the Presidency of Princeton to the Presidency of the nation. His stirring campaign in New Jersey, his telling administration as Governor, his frequent speaking on politics before audiences in all parts of the country, led us insensibly to think of him more as a public man than as a college man. But across the water they are struck by the fact that Americans, after many years of talk about "the college man in politics," have at last taken one and made him President.

And with a credulity that will seem amazing to our skeptical politicians, these foreign commentators do not think that a university man in public life will be too innocent for the wicked world in which he finds himself. They even allege that their own experience leads them to believe that Mr. Wilson will prove as shrewd and efficient in practical statecraft as any old stager. They know, of course, that he has already given proof of his quality. As the London *Times* remarked, "he has already shown that he can beat the politicians at their own game." On this same point, the words of the Manchester *Guardian* are worth quoting in part:

> His opponents have, of course, not missed the chance of depreciating Dr. Wilson, former professor and university president, as a "doctrinaire" and "theorist," and contrasting him with Mr. Roosevelt, the "practical" and "efficient" man of action and affairs. But the American people, being angry with the "bosses," are not unaware that Dr. Wilson, during his two years' Governorship of New Jersey, has shown himself extremely independent of "boss" rule and an enterprising administrator, and that Mr. Roosevelt during his seven years as President did a great deal to stir up public interest in his "policies," but accomplished little or nothing towards carrying them into effect.

One newspaper, the *Frankfurter Zeitung*, makes a brief but interesting comparison between the personal qualities of Gov. Wilson and President Taft. It speaks in the most emphatic way of Wilson's attainments and character, referring in passing to the foolish notion that men of outstanding ability should be kept out of public positions to the duties of which they are strange. Of Taft the *Zeitung* says that his tendencies are those of a judge and an official, whereas Wilson it sees as an independent statesman with a rich mental equipment and wide views, who will strike out new paths. It expects him to be not only the head of the Government but a leader in American political thought.

Such expressions of foreign opinion are not to be urged for more than they are worth. Most people in this country have, happily, ceased to employ the silly old braggadocio, "Who cares for abroad?" We should care, and do care, for what Europe thinks of us. Of its judgments on our politics and our public men we ought to think neither with contempt nor with undue deference. But it certainly is a reason for satisfaction that our well-wishers on the other side of the Atlantic speak with so much praise and so much hope of the man whom we have just elected to the Presidency. Those who have restlessly wished that the United States would do something startling in order to "impress the imagination of Europe," may now be invited to see how easily the thing was done. All that was necessary was to show that we regarded conspicuous ability and special intellectual training as not a fatal bar to the highest office. Europe rubbed her eyes at that, and sat up to take notice.

THE RAILWAY WAGE AWARD.

The two considerations of paramount importance in the decision of the Board of Arbitrators on the railway engineers' wage dispute are that both parties to the controversy have acquiesced in the Board's decision, and that the decision itself was virtually unanimous. Although, as was to be expected, the two arbitrators selected respectively by the railways and by the engineers' union dissent in principle from certain parts of the decision, the five neutral arbitrators concur in the award without dissension and there is no minority report.

We believe that the fact of this unanimity will prevent altogether the result which appears to be inferred, in some quarters, from the statement of Mr. Morrissey, the labor arbitrator, that the settlement "can be only temporary." Next May the arrangement will cease to be formally binding on either party, and it is open to any one to imagine the engineers then bringing back the situation to the status of last March, when a "tie-up" of the Eastern railways seemed to be imminent. But we regard this as the extreme of improbability. As in the case of the similar unanimous decision on miners' wages by the Anthracite Commission in 1903, the moral effect of the arbitrators' attitude must be to establish new principles of action for the disputants which cannot be lightly departed from.

The appeal of the Board for abandonment of the expedient of industrial warfare, of strikes by railway employees such as will paralyze transportation industry, is strong and convincing. It rests itself primarily, as it should, on the rights of the whole community. That "any groups of men, whether employers or employees," should enjoy and exercise "the power to decide that a great section of the country, as populous as all France, shall undergo great loss of life, unspeakable suffering, and loss of property beyond the power of description, through the stoppage of a necessary public service," is "intolerable." A strike of this sort "in the army or navy is mutiny, and universally punished as such"; even in the case of postal clerks or teachers in the public schools, "the employment, to borrow a legal phrase, is affected with a public use, and this of necessity qualifies the right of free concerted action."

This is a vigorous and much-needed assertion of the rights of that "third party to the controversy" in such industrial disputes—the general public—which has so constantly been treated, in the past, as a negligible factor in the case. The arbitrators do not flinch from pressing their argument to its conclusion. They advise "the creation of Federal and State Wage Commissions which shall exercise functions regarding labor engaged in work upon public utilities analogous to those exercised with regard to capital by the Public Service Commissions already in existence."

We are not altogether prepared to accept that plan as feasible. It is manifestly surrounded with obstacles, social, legal, and constitutional. But the underlying principle will be served by resort to habitual arbitration such as is provided by the Erdman act, which the engineers' unions ignored in their attitude of last spring; and the Board's present findings certainly open up the discussion of compulsory arbitration. That some machinery must be set up by law, which will prevent a group of impulsive or hot-headed leaders, employers or employees, from inflicting on whole communities the experiences of a military siege, is a conclusion which, we believe, every thoughtful citizen has already reached. What the French Government did, through the violent expedient of calling out the railway engineers as part of the army reserve and requiring them, under military penalty, to operate the trains, it must be possible for the United States to do through normal and constitutional means.

In its specific details, the award of the arbitrators is a compromise. It denies the engineers' full demand for wage advances, and decides that a general increase in wages on all the roads concerned is not warranted by the facts. But it takes equally positive ground in "standardizing" the wage scale and granting special increases which are held to be reasonable in the light of evidence. On the basis of distance and hours of labor, a minimum rate of wages is prescribed. This is recognized as involving higher average pay than now prevails. Where the railways estimated, last spring, that the demands of the engineers would entail an addition to running expenses of $7,553,000 per annum—an increase of some 18⅝ per cent.—it is roughly figured out to-day that the increase under the Board's decision will be possibly half that sum.

In many respects, the most troublesome stumbling-block was the fact that some railways can comfortably meet the new wage charges, whereas others, in a less favorable financial position, can not. The arbitrators do not go into this question, except to express opinion that the great majority of the roads are able to meet the requirements. Where railways can show their financial inability to do so, the Board holds that there is just cause for them to reopen the question of increased transportation rates with the Interstate Commerce Commission. The present arbitrators could obviously go no further, and their opinion, thus expressed, will undoubtedly have weight with the Commission. It must be pointed out, however, that the Commission's assent to higher freight rates, on such railways alone as had shown their financial position to require it, would not at all solve the difficulty.

For one or two railways—especially (as would be the case under the supposed conditions) railways not able to provide the best route, service, and equipment—to charge more for transportation than their stronger competitors, would be to sacrifice much of what they were able at present to procure. Under the régime of the old trunk line pools, the "differential" allowed to roads thus handicapped was a lower, not a higher, rate. Apparently, if a higher rate is to be allowed because certain railways cannot earn a living without it, that rate must be granted to all other competing lines alike. There is a reasonable inference from this part of the situation. The arbitrators have refused a "horizontal advance" in wages, but have conceded higher schedules where the evidence showed such advance to be fair and reasonable in itself. Precisely so, the Interstate Commission may be expected, although maintaining their previous opposition to a sweeping and general advance in transportation rates, to concede advances in given articles, groups of articles, or special lines of service, where it can be shown that the present rate is out of line with rates on other commodities, or with the cost of moving the kinds of freight in question, on the new basis of wages.

BANKING LEGISLATION.

The present converging of public interest on what the new Administration and the new Congress will do with the tariff, is natural. That matter will be taken up first of all in the extra session. But, for two reasons, it is not too early to consider what other things the party has to do. For this has a bearing, first, on the unfolding of the Wilson Administration's general policies, and also on the course to be pursued in the final session of the present Congress.

That early consideration will necessarily be given to the banking and currency problem, we suppose is generally admitted. The absence of any active discussion of it on the stump, in the recent campaign, excited considerable comment. We have vague recollection of an excited outcry from some quarter or other, towards the close of the campaign, charging all three parties with a "conspiracy of silence" on this issue. The allegation was absurd; for platforms and candidate, so far at least as concerned the Democratic party, had spoken clearly and forcibly on the currency.

That it was subordinated in the discussions of the campaign was obviously due to the fact that the people preferred to hear of something else, more immediate; and to the further fact that men of all parties recognized the extreme unwisdom of subjecting a highly technical economic question of the sort to the buffetings and perversions of an excited political contest. Unlike the "silver question" on which appeal was made to the voters in 1896, the present problem did not involve a clean-cut economic issue, and it did not present the alternative between two opposing economic policies. To have forced into controversial politics a question in that shape would have been like submitting to a plébiscite the details of the Specie Resumption Act of 1875 or of the Gold Standard and bond-refunding law of 1900.

But the Democratic party none the less comes into power pledged to deal with the currency question. The Baltimore platform recommended "such a systematic revision of our banking laws as will render temporary relief in localities where such relief is needed." But that proposal necessarily involves the whole problem of coördination and centralization of the machinery of credit. Mr. Wilson's speech of acceptance, while admitting lack of intimate knowledge of currency reform, frankly accepted the task of such reform. He is said to be giving it attention in Bermuda. It will have to be dealt with in his inaugural address, and possibly on more specific lines than in his earlier speech.

Of more immediate concern, however, is the policy of the present Congress. The banking and finance committees of that body have in their hands the so-called Aldrich bill. They are not likely to report it as it stands. We doubt if it would be a real service to propose a currency bill of any kind at the present session; for it would almost certainly be foreordained to a speedy demise.

More or less associated with currency legislation, in the mind of law-makers, has been the so-called "Money Trust investigation." That inquiry originated, as most people are aware, in a resolution submitted by a group of Congressmen who had grasped the facts about some existing evils in the situation, but whose imagination had roamed from facts to the region of wild and fantastic dreams. Senator La Follette's notion of a hundred selected millionaires who create at their selfish whim prosperity and adversity, and the later conception of a Money Power which puts wheat up and cotton down, regardless of such trifling influences as production and consumption, supply and demand, found lodgment in the heads of those legislators.

The inquiry was not left in the hands of such fanatics; it was entrusted to the regular Banking and Currency Committee of the House. Even so, however, it was, most unfortunately, conducted in a spirit and manner which brought profound regret to those who believed, as the *Nation* believes, that there are openings for abuse in the present state of affairs in the investment and credit markets, which ought to be carefully guarded. The examination of witnesses, last spring, did indeed elicit facts regarding several existing or potential evils in the business machinery of the day. But carried on, as it was, with an apparent presumption that any witness connected with a financial institution was a suspicious person, and with repeated gross unfairness in the cross-questioning of such witnesses, the inquiry had two very deplorable results. It alienated hundreds of fair-minded men who were not opposed to the committee's legitimate purposes, and it heightened in minds of the uninformed an already existing misconception of important financial episodes and institutions. We need go no further than to recall the committee's inquiries into the Treasury's action at the crisis of the panic of 1907.

We are not, therefore, greatly surprised at the intimations from Washington that the committee itself believes its period of usefulness in this direction to have been outlived. This is the more natural conclusion, in that the new Administration will enter office pledged to take up the question. It ought to have the opportunity of doing so without the handicap of irritation and resentment consequent on continuance of an inquiry in the spirit of the recent hearings. Legislators or investigators should now begin their examination of the problem with a clear and sane idea of what is wrong, and proceed in a statesmanlike way to establish the facts and prepare such remedial legislation as is indicated.

ENGLISH DIVORCE REFORM.

In the United States, divorce reform has for years meant a movement against too great laxity, and against crying scandals, in the methods of dissolving the marriage bond. In England it is the other way round. There the complaint has been of the undue severity and the glaring inequality of the law. And this is the main thing to bear in mind in judging of the recent report of the English Divorce Commission. Its findings were given by the cable with sufficient accuracy, but a reading of the full text of both the majority and minority reports, now at hand, shows that not enough emphasis was placed by the telegraphic accounts upon the urgency of certain changes and improvements in the English law of marriage. These were insisted upon by the majority and some of them were concurred in by the minority. Hence we have both sides agreeing that certain reforms are highly desirable. Putting aside differences for the moment, the really striking fact is that all the able and conscientious men and women who were members of the Commission, and who have been taking testimony and hearing experts for three years, are of one mind in concluding that there is a great deal both of hardship and injustice in the administration of the English divorce laws.

Consider, to begin with, the long-standing grievance of the inability of the poor, simply because they are poor, to obtain a divorce even when it is their right under the law. This, to be sure, goes in a way with the generally large expense of litigation in England, but of such a gross form of denial of justice to the poor, merely on account of their poverty, there can be no defence. To do away with it must be, as the Commission maintains, a reform "in the interest of morality as well as in the interest of justice and in the general interests of society." The statements of the report in this matter recall the famous deliverance of an English judge, sentencing a workingman for bigamy. The defence was that he had not been able to obtain a divorce, though fully entitled to it, but the judge, with fine sarcasm, pointed out to him the long and expensive legal course he should have followed, until his case was finally passed upon by the House of Lords. Then the judge concluded: "You may say, prisoner, that this would have cost you ten thousand pounds, and that you have not ten thousand pence, but it is my duty to say to you that the law of England is no respecter of persons, but does justice alike to the rich and to the poor." The reform now proposed by the Divorce Commission calls for the extension of jurisdiction over divorce to county courts, with special Commissioners in matrimonial cases, and a great cutting down of the cost of proceedings. This is so reasonable, and is, indeed, so imperatively demanded, that the Archbishop of York and his two dissenting colleagues of the minority concur in the recommendation.

So they do in the proposal that the law shall place the husband and the wife on an exact equality in the matter of divorce. At present, the man can obtain a divorce on the ground of adultery by the wife, but the wife has to be able to prove "cruelty" in addition. On this point, what the Commission says, preliminary to its decision that whatever grounds for divorce are permitted to the husband should be available to the wife, really makes an end of controversy:

> Apart from abstract justice, the strongest reason for placing the sexes on an equality is that, where two standards exist, there is a tendency to accept the lower for both parties. The social and economic position of women has greatly changed in the last hundred, and even in the last fifty, years. In our opinion it is impossible to maintain a different standard of morality in the marriage relation, without creating the impression that justice is denied to women, an impression that must tend to lower the respect in which the marriage law is held by women.

If the two reforms thus unanimously advocated by the Commission are achieved, they will alone justify its labors. Dissent arises only when it is proposed to recognize by law new causes for divorce in England. Upon the extension suggested by the majority of the Commission we have already commented. The criticisms of the minority are mainly directed to details and to the bad consequences which it is alleged would follow. Thus the majority would make incurable insanity a ground for divorce. They would carefully guard against abuse. The person must have been continuously confined as insane for five years. There are other safeguards. But, affirm the minority, insanity is a bodily disease, to be treated like any other. Why single this out as justifying divorce any more than, say, epilepsy or paralysis? But this sounds a good deal like quibbling. Everybody knows that there are cases where a woman is tied to a man, or vice versa, who is hopelessly insane and as good as dead. It may be true, as the minority assert, that there is "no evidence of any great demand for divorce on the ground of insanity," but if there is any demand for it at all, and if its refusal would be a great cruelty and in some instances lead to a deliberate ignoring of marriage conventions—as in the almost tragic case of George H. Lewes and George Eliot—the duty of changing the law would seem to be clear. When there is only the slightest possibility of abuse, though the relief granted will prevent much anguish, legislators cannot long hesitate.

We need not recur to the other grounds for divorce which the majority of the Commission would embody in the English law. There will be much delay and discussion before the matter is pressed to enactment. A great deal is made of a predicted flood of scandalous divorces. On this point, one of our own leading experts and divorce-reformers, the Rev. Dr. Dike, holds the view that at first there would be an increase in English divorces, but that very soon the number would settle back to little above what it is now. That would imply that the remedying of a few cases of flagrant injustice would not seriously affect the general English opinion of the sanctity of marriage, or really do much to alter the accepted belief that marriage is normally and usually indissoluble except by death.

THE CARELESS IMMORTALS.

That, in spite of all sneers to the contrary, we do care for something besides money, is proved by the affair of Shakespeare's gloves. When a number of Americans can so far forget the pressing demands of time and circumstance as to write letters to the newspapers, in which they discuss with great eagerness the question whether Dr. Furness's treasured relics ever actually covered the hands that penned "Hamlet" and "King Lear," then we may be sure that the love of higher things is not altogether dead among us. One of these writers at first tips the beam in the direction of what some people would call the historicity of the gloves, although he later takes away as much as he adds to this side of the argument by offering the truly staggering suggestion that there may have been more than one pair. Is it impossible to touch upon anything connected with the bard, his unlearned admirers will be tempted to exclaim, without sooner or later finding it involved in a mesh of mystery. What prevents the next participant in the debate from pointing out that, as success crowned his work, the prosperous playwright probably provided himself with a pair of gloves whenever he felt the need of them?

Such reasoning is especially to be deplored as casting suspicion upon the value of any little relic that one happens to possess, and that one's friends are accustomed to have exhibited to them. It is manifestly out of the question, as a rule, to have one's own bit of association with the mighty dead certified as the only one of the kind in existence; all that can be done is to strengthen the presumption in its favor by calling attention to the well-known carelessness of immortals in the matter of preserving objects of interest. Shakespeare, indeed, seems to have been an exception in this respect. We know that, besides the pair or pairs of gloves, he took pains to start posterityward a second-best bed, which, unfortunately, seems not to have fulfilled his purposes for it. But how many others of the glorious company of the famed have given a thought to the museums of the future? Julius Cæsar, who could hardly have been restrained by any sense of modesty, false or other, might well, if he had been spared, have left us his stylus, that instrument of torture for countless generations of schoolboys.

There is no blinking the fact, however little we may like it, that the great of this world are extremely thoughtless in this matter. Apparently, they think that they have done their whole duty when they have painted a few pictures or composed a little music or written some poems. Even for these they do not invariably display the care that one is apt to bestow upon the things which one loves. When they do, they usually stop with that. Here, they say virtually, are our jewels. Yet is it so difficult to foresee a time when what people want is not the Iliad, but one of Homer's sandals? Which would Barnum have moved heaven and earth to get for the Greatest Show on Earth, the manuscript of a page of the Æneid, or one of Dido's head-dresses? What would attract the throng to the Metropolitan Museum like a ring that once sparkled on Cleopatra's finger? The Twelve Tables might be in the same room, but their only hope for notice would be in their proximity to the ornament.

Yet it would be ungracious not to notice a tendency in our own time in the other direction. Warned by the example of the immortals of preceding ages, the more forehanded of our own do give attention to the rights of relic-hunters.

Pages of manuscript of every classic that these writers have turned out are already on exhibition in branch libraries, and their desk-chairs will be generously devoted to the same noble purpose as fast as they have to be replaced. Their watches, of course, have long been promised to favored friends who will see that they are not unduly concealed from the public. Until fences went out of fashion, a candidate for the Presidency could show his essential and incurable democracy in no more conclusive way than by smiling as his enthusiastic partisans took away, picket by picket, this adornment and protection of his residence. That we still have much to learn in this respect, however, is shown by the recent confession in print of a man who a few years ago destroyed several copies of a musical programme containing the name of Woodrow Wilson, although Mr. Wilson was at that very hour the president of a university. Not until we adopt precautions with reference to the belongings of every person whose name appears in Who's Who at least, can we assert the possession of a true historical sense.

THREE NEW UNIVERSITIES FOR INDIA.

London, November 13.

There is an active movement afoot to establish three new universities in India. One of these is to be established at Dacca; the second is the Mohammedan Anglo-Oriental University, to be founded at Aligarh, in the United Provinces of Agra and Oudh; and the third is the Anglo-Vedic University, to be started at Benares. The British-Indian Government is launching the first, while Indians are promoting the other two, which will be built with native money, and will remain under native control, the state granting them charters and exercising such supervision as it deems necessary in order to maintain a high standard of efficiency. These schemes are important not only because they aim at materially supplementing the facilities for higher education at present offered by the existing Universities at Calcutta, Madras, Bombay, Lahore, and Allahabad, but also because they propose institutions such as Hindustan does not possess at present. On account of the issues involved in their projection, a fierce educational controversy is now raging in the peninsula.

Two reasons are assigned by the Government of India for the establishment of the University of Dacca: (1) to relieve the inordinate pressure of work from which the University of Calcutta suffers, and (2) to give Hindustan a university of the most modern type.

The Calcutta University each year attracts to itself about 15,000 students, who migrate to the capital of Bengal in order to appear in examinations ranging from matriculation (corresponding with the high-school examinations in the United States) to those for the highest diplomas in arts and sciences. The candidates come from an area which includes the Province of Behar, the present presidency of Bengal, and Burma, containing a population of more than one hundred million. The University also is responsible for keeping up the standards of about three-score colleges and six hundred schools, scattered over the same vast territory. The strain upon the authorities of the Calcutta University is aggravated by the fact that the majority of the students in the recognized colleges, being non-residential, live in cheap lodging-houses which are insanitary and morally unhealthy.

Dacca, situated about one hundred and fifty miles northeast of Calcutta, is a city of historical importance, and for some years past has served as the capital of Eastern Bengal and Assam, a distinction recently lost by it on account of the changes inaugurated at the last Delhi Durbar. It boasts of several scholastic institutions, the largest being a college lately established by the Government and possessing a large hall, named after Lord Curzon, modern laboratories, and healthy, pleasant hostels fitted with electric lights and fans. It is proposed to raise this college into a residential and teaching university, and make it serve as the educational centre of the districts surrounding Dacca.

Some Indians interpret the project as a sinister move on the part of the British administrators to lower the prestige of the University of Calcutta, and incidentally of Calcutta itself; and some have not hesitated to characterize it as an attempt especially made to benefit Mohammedans, who constitute the bulk of the population in Eastern Bengal. Some time ago a deputation of Bengalis, headed by Dr. Rash Behari Ghosh—a distinguished graduate of the Calcutta University—waited upon the Viceroy and sought to dissuade him from establishing the new University. But Lord Hardinge disavowed any ulterior motives, and refused to give way before the adverse agitation. It is expected that the project will be carried out promptly.

The second scheme has for its aim the conversion of the Mohammedan Anglo-Oriental College at Aligarh into a university. This institution was established in 1877, by the late Sir Syed Ahmed Khan, so that Mohammedans could master the arts and sciences of the Occident without having their religious beliefs undermined in secular schools and colleges conducted by the Government and Christian missionaries. The aim of the institution naturally appealed to the enlightened Moslems, and they have befriended it, until to-day it is one of the best equipped educational establishments under native management in India. It has an endowment fund of $2,300,000, enjoys an annual income of above $75,000, and has a large number of modern buildings and an excellent equipment for teaching, its science laboratories and its arrangements for physical culture being among the best in Hindustan. It has an enrolment of above 1,100 pupils, who come to it from distant parts of the peninsula, and a large percentage of the students in the college department are residential.

For years the Mohammedan leaders who worked alongside Sir Syed Ahmed Khan in his lifetime, and who have been carrying on his propaganda since his death in 1898, have been desirous of converting this college into a university. In the last two years this wish has assumed a compelling force. Under the leadership of his highness Sir Sultan Mahomed Shah, the Aga Khan, an influential deputation of Indian Mussulmans, has been indefatigably working to collect funds for this purpose. Nearly $1,350,000 has been promised, and it is expected that this amount will be trebled within the next few months.

The third project under way has been designed with a view to establishing a university which will impart instruction in Hindu religion and philosophy, along with Occidental culture, to the sons and daughters of Hindus. Two colleges—the Central Hindu College of Benares and the Dayanand Anglo-Vedic College of Lahore—for years have been working to this end. The former, founded by an Englishwoman (Mrs. Annie Besant, of Theosophical fame), with the help and money of Indians, strange to say, is a much more conservative institution than the other, which was started and is conducted by natives belonging to the Arya Samaj, a Protestant Hindu sect. For some years Mrs. Besant has been trying to make the Central Hindu College into a University. At the same time, a Hindu leader, Pandit Madan Moham Malaviya, has been working for the establishment of a Hindu University. A few months ago the two were persuaded to amalgamate their schemes and join forces. As the result of their combined efforts, they already have obtained the promise of above $1,000,000. The Maharajah of Durbhanga, as the chairman of the committee, has gone from place to place collecting subscriptions, and has a generous colleague in the Maharajah of Benares.

For a country like India, where such enterprises mature very slowly, the projects for Mohammedan and Hindu universities have been making rapid progress, and the educated Indians have displayed great enthusiasm in projecting the schemes and subscribing funds for them. The foreign administration, however, has a good deal to say about the inauguration of these institutions, since, if they are not recognized by the Government, they are not likely to appeal to the ordinary Indian parent, who, before investing money in a boy's education, is anxious to make sure that his degree will help him to earn his living, and a diploma from an unrecognized university, for patent reasons, is bound to prove useless as an instrument to obtain employment under the Government—a very important consideration. Some months ago the Minister of Education promised that the Administration should have no objection to granting charters to the promoters of the proposed universities, provided they were willing to raise adequate funds and agree to official supervision requisite in the interests of efficiency—demands readily acceded to by those interested in the new schemes. However, quite recently the same authority has declared that the Secretary of State for India is prepared to permit the denominational universities to be merely residential institutions, and, contrary to the practice in the cases of the present Indian universities, will not allow them to affiliate colleges and schools with themselves, and examine students from outside their own enrolment. This declaration has raised the ire of those who are pushing the projects, and who naturally cherish great ambitions. Not a few of them are construing the Government move to be dictated by jealousy and mistrust, and have not hesitated to charge the Administration with proposing to repudiate the pledges given by the Educational Minister. This has generated considerable heat; but the Secretary of State for India is firm in his decision, and the Government is not inclined to permit much agitation; and as the promoters are very anxious to start the institutions, and still more desirous of official recognition, there is little doubt that they will bow to the inevitable.

SAINT NIHAL SINGH.

NEWS FOR BIBLIOPHILES.

The sale, by the Anderson Auction Company, of the great library brought together by the late Robert Hoe has been finished, and has passed into history. The total of the 14,588 lots, sold in 79 sessions, is announced as $1,932,056.60. On October 15, 1910, without having made any itemized valuation, we said in this column: "The library, we presume, comprises upwards of 15,000 titles, and its value may be estimated at something approximating $2,000,000." But then, even the auctioneers themselves were unwilling to believe that the collection would bring such a sum. In fact, the appraised value of the library was, we understand, only $750,000.

While the chief reason which brought about the very remarkable success of the sale was the great fame of the library and the high quality of so many of the books included in it, the effect upon the sale of that irrepressible genius, George D. Smith, the Wall Street bookseller, must not be ignored. As is his usual custom, he bid on almost every lot, and was a competitor against the whole field. One bidder could carry out such a policy. Had two tried it there would have been another Northern Pacific panic. When the history of book prices in America is written, the effect of Mr. Smith's elevating efforts cannot be overlooked.

Collectors generally, and chief among them, Mr. Henry E. Huntington, realized that here was an unusual opportunity, hardly likely to occur again, to procure fine copies of the world's most famous books, and an additional hundred dollars or thousand dollars in the price was a small matter. And rightly, too, for in these days the great rarities among famous books must be snatched at when they appear, otherwise in many cases the opportunity is lost forever. Price and value are entirely relative matters, controlled by many factors. The little book of four leaves, the "Narragansett tract," printed at the first Massachusetts press in 1645, was thought too dear at some such price as $150, and was rejected forty years ago by both of those great (and generally bold) collectors, James Lenox and John Carter Brown, whereas Mr McCormick pays $10,000, and is well satisfied. And, whether cheap, reasonable, or dear in price, this is certain, that no man can take another $10,000 and go out into the market and buy another copy of this little book. Even more truly is this the case with the "Morte D'Arthur," printed by Caxton, for which Mr. Morgan gave $42,800. For in the case of this Caxton, the duplicate does not exist, or, if by chance it does, is hidden somewhere unknown and unhonored. That volume would not have been dear at $100,000.

But all this is no defence for any person paying $50 or $100 for a book of. which a dozen copies might be gathered together from the bookshops of London and New York, at a price of $10, $15, or $20 apiece, equal in every other respect, though not possessing the book-label of the Hoe library. Some fancy prices were paid for Robert Hoe's book-plates during the progress of the sale.

Mr. Hoe, in his will, while he instructed his executors to sell his library at auction, left it to their discretion whether the books should be offered in America or in Europe, and it was a serious question for some time whether the entire library, or at least a part of it, might not be sent to London or Paris for sale. The results have certainly justified the decision of the executors. Mr. Hoe had perhaps the finest collection in America of choice French books, and the universal feeling was that this portion of the library might be sacrificed. But even the French books sold well. The more important Paris dealers were represented, and a good many of these books have gone back to France.

The Hoe library was the result of just about half a century of collecting. As a young man, Mr. Hoe bought finely printed English books, such as those produced by the Chiswick Press for William Pickering. Later he bought older books from famous Continental presses, illuminated manuscripts and printed Books of Hours, which he greatly admired, and of which he gathered a notable collection. His early interest in old English books is shown by the fact that he gave encouragement and financial assistance to David G. Francis in reprinting Collier's "Bibliographical Account of the Rarest Books in the English Language," published in four volumes in 1866.

Mr. Hoe and Mr. William Loring Andrews used to send their bids together to some of the English auction sales. Then, when the purchases were received, the two would draw lots to see which would have first choice. The most important book awarded in this manner was the first-folio Shakespeare, which they bought at the Syston Park sale in December, 1884, for £590. When the box was opened, it was Mr. Hoe's good luck to get first pick. The folio brought $13,000 at the sale. Mr. Andrews, although he never procured a first-folio Shakespeare, has many other books which, if sold, would give him an equally attractive profit.

Mr. Hoe did not buy libraries entire as Mr. Morgan, Mr. Archer M. Huntington, and Mr. Henry E. Huntington have done, though he was the actual purchaser of the collection formed by Mrs. Abby E. Pope, of Brooklyn, sold in 1895, after her death, by her husband Norton Q. Pope. From this collection he selected the books he wanted and the balance, the greater portion, was put upon the market. From the Pope collection he procured his two finest Caxtons, the "Morte D'Arthur" and the Gower, most of his Shakespeare quartos, and a good many other books, including some of his rarest Americana. Up to that time, he had taken no interest in Americana, but even Mr. Hoe could not resist the attractions of Smith's "New York," large paper and uncut; Filson's "Kentucky," with the map; Horsmanden's "Negro Plot," in the original boards and uncut, and similar books.

A little later, when the wonderful collection of Americana gathered together by Charles H. Kalbfleisch, a collector of knowledge, discrimination, and courage known to few, was being broken up and distributed, the books were acquired mainly by either Mr. Hoe or Mr. Lefferts. In order that he might not miss any opportunities, Mr. Hoe bought almost everything that was offered to him, and took what he did not want himself to a firm of Fifth Avenue booksellers, through whose hands they passed into Mr. Church's collection. Later, when Mr. Lefferts sold his books, the best of his Americana was procured by Mr. Church. Preëminent among the Kalbfleisch hooks which Mr. Church never had a chance to buy were the Vespuccius's Four Voyages, in Italian, and the "Narragansett Tract." Mr. Huntington bid boldly for these two treasures at the Hoe sale, but let them both go, the first for $8,000, and the second for $10,000, and they are now, it is said, in the library of Princeton University.

Few such libraries as Mr. Hoe's have found their way into the auction room; none has ever brought such a price. For Robert Harley's books, about 400,000 volumes and pamphlets, Thomas Osborne, the bookseller, paid £13,000 in 1742, and found the purchase an unprofitable one. The Harleian manuscripts, more than 20,000 volumes and documents, were sold by Lady Oxford to the British Museum. Richard Heber's library, dispersed in thirteen sales, from 1834 to 1837, the catalogue describing 51,234 lots, brought a total of £65,000. Either of these two collections, the greatest ever formed by individuals in England, if they could be offered now, would no doubt bring sums surpassing the total of the Hoe library. Among recent sales at auction, the library which has brought the greatest price was that formed by the Earl of Ashburnham, sold at Sotheby's, in London, the manuscripts in 1891 and the books in 1897 and 1898, bringing a total of £95,929 11s. The Earl's heirs had, however, sold many of his manuscripts at private sale, and it has been estimated that £160,000 may have been realized for the entire Ashburnham collection.

Nor are we likely to see such sales again. The Huth library, now being dispersed at Sotheby's (A to D of the alphabet has been sold) may in proportion to the number of lots approximate Hoe values, but no other great library, as wide in its scope, is likely to come upon the market. There is no probability that the Morgan, Huntington, Halsey, Folger, or White collections will ever be disposed of at auction. We cannot speak so positively of the few great inherited libraries still left intact in England, where land taxes and inheritance taxes are forcing the sale of many literary and artistic treasures, but there is little likelihood that the great Christie-Miller library at Britwell Court; the collection begun by Sir Thomas Egerton, who died in 1617, and added to by his descendants, preserved at Bridgewater House, or the Duke of Devonshire's collection at Chatsworth will be broken up in our day. But who can tell? In 1889 the elder Quaritch, though his business was built up by the dispersal of such libraries, wrote feelingly in a preface to one of his catalogues:

> The bearers of names only less noble than the fame of their lettered ancestors have discovered the pecuniary value of the books which they inherited; and lo! they rush into the market-places to sell. Little do they know that this ignoble traffic is like parting with the talisman which preserves the honor of their houses. Old books bartered for new coins! old lamps exchanged for new ones! But the light that shone from the old lamps can never be rekindled.

Correspondence

ROOSEVELT AND PISISTRATUS.

To the Editor of The Nation:

Sir: I have waited until the heat of the campaign has cooled off, and the blackness of my diaphragm has changed to a lighter hue, before asking you to let me reply to a communication in the *Nation* of October 31, signed Polites.

This writer has seen fit to compare the act of Pisistratus, in exhibiting his self-inflicted wounds, with a recent act of a living man, for seven years President of the United States, who, when actually wounded, but not by himself, appeared in public, not to show his injuries, but to plead impersonally for a cause in which he seemed to believe. The actual words of Theodore Roosevelt are turned into an imaginary speech which might have been delivered to the Diacrioi to excite their sympathy. Great as were the merits, beneficent as was the rule of the great tyrant, and well known as are some of the faults of Theodore Roosevelt, I cannot understand why any fair-minded man should equalize a deed of hypocrisy, such as displaying self-inflicted injuries, with the conduct of another, who, still suffering from an assassin's bullet, seeks to belittle himself and his wounds in comparison with greater matters.

Lindsay Swift.

Boston, November 16.

FANCY AND IMAGINATION BEFORE COLERIDGE.

To the Editor of The Nation:

Sir: Mr. J. W. Mackail, in the chapter on Imagination in his recently published Lectures on Poetry, makes the assertion that before the days of Wordsworth and Coleridge there had been no attempt to fix the word *imagination* down to a precise and technical meaning. This is the commonly accepted opinion. But, in the latter part of the eighteenth century, there had been, especially among the Scotch philosophical critics, a good deal of speculation as to the nature and function of the imaginative processes, and at least a few attempts at giving definiteness of meaning to the term *imagination*. John Ogilvie, for instance, in his "Philosophical and Critical Observations on the Nature . . . of Composition" (1774), discusses the question of imagination in literary art at considerable length, and makes a distinction between two kinds of imaginative activity that, in some respects, suggests Coleridge's distinction between fancy and imagination. The imagination has, he points out, a higher and a lower phase; in the latter, the imagination is employed "in the selection of objects which have an independent original; or in the imitation of beauties which it cannot improve"; it fashions a new unity, but "the materials of which the whole is compounded lie open to the senses." In other words, the imagination here is simply drawing upon the memory for bits of imagery out of which it fashions a mosaic-like picture where each component part preserves its original identity. (Compare Coleridge's declaration that fancy "has no other counters to play with but fixities and definites," and "must receive all its materials ready made from the law of association.") In the higher form of imaginative activity, the case is different. Here, says Ogilvie, the imagination, "instead of taking cognizance only of external objects, is employed to combine remote and abstracted ideas, . . . whose union forms altogether an object never formerly perceived"—an object which is, in fact, "in some measure a new creation." While the imagination in the one case "only imitates beauties presented by sensation," in the other case it "becomes properly the inventor or maker of a new character." (Compare the following from Wordsworth's Preface of 1815: "Imagination, in the sense of the word as giving title to a class of the following poems, has no reference to images that are merely a faithful copy, existing in the mind, of absent external objects; but is a word of higher import, denoting operations of the mind upon those objects, and processes of creation or of composition, governed by certain fixed laws.")

In Ogilvie there is no hint of a distinction between the terms *fancy* and *imagination*. In James Beattie's "Dissertations Moral and Critical" (1783), there is, however, a recognition of the fact that the two terms were not always used synonymously. "According to the common use of words," he says "imagination and fancy are not perfectly synonymous. They are, indeed, names for the same faculty; but the former seems to be applied to the more solemn, and the latter to the more trivial, exertions of it." As the distinction was not universally observed, Beattie declines to make any use of it, and contents himself with indicating the sense in which the term *imagination* is generally used.

Neither Ogilvie nor Beattie, it need scarcely be remarked, recognizes such a separation of the imaginative processes as Coleridge had in mind in declaring that "fancy and imagination were two distinct and widely different faculties."

CONTRIBUTIONS AT THE ALTAR.

To the Editor of The Nation:

Sir: The custom of bringing church contributions to the altar, referred to by Miss Dudley in the *Nation* of November 14, is not confined to negro congregations. I learned of the practice in white churches in Missouri about ten years ago, and have been in the habit of using it to illustrate to my classes the Wife of Bath passage. The strongly traditional character of the custom is shown by the experience of an acquaintance; who, as a visiting preacher to one of the churches referred to, nearly got himself into difficulty through ignorance of the custom by trying to take a collection in the modern fashion.

Butler College, Indianapolis, November 21.

DR. FURNESS IN NEW HAVEN.

To the Editor of The Nation:

Sir: In Prof. Felix E. Schelling's beautiful tribute to the late Dr. H. H. Furness, published in your issue of August 22, occurs the following sentence: "Possibly the last semi-public reading of Dr. Furness was at the annual dinner of the Shakespeare Society of Philadelphia, last April, when he read to less than a score of us one of his favorite plays, 'The Winter's Tale.'" At a meeting of the Elizabethan Club two weeks ago, Prof. J. C. Adams reminded us of a fact that seems worth recording, viz., that we of the Elizabethan Club in New Haven had probably had the sorrowful honor of being Dr. Furness's last audience on an occasion of this sort. For on the evening of May 1, in the Club's assembly room, Dr. Furness read to some fifty of us from "The Winter's Tale," giving us all the more important scenes and passages of the play, with occasional delightful commentary and a most captivating rendering of Autolycus's song. One little illustration of his charming geniality is certainly worthy of preservation; during the brief remarks of his formal introducer he kept his ear-trumpet resolutely by his side, and then, when the ovation of welcome had subsided, looked round upon us with his winning smile and archly observed: "I never try to hear what is said about me, by way of introduction. Listeners never hear any good of themselves!"

Dr. Furness was the most distinguished among the honorary members of the Elizabethan Club. His emotion while reverently handling the Club's First Quartos and First Folio was a rare and moving spectacle, never to be forgotten.

Literature

GEN. WILSON'S MEMOIRS.

Under the Old Flag: Recollections of Military Operations in the War for the Union, the Spanish War, the Boxer Rebellion, Etc. By James Harrison Wilson, Brevet Major-General, U. S. A. Two volumes. New York: D. Appleton & Co. $6 net.

Of these two volumes of 1,162 pages, seven-eighths are filled with the author's recollections of the War for the Union. He disclaims any purpose to write a history or a military treatise, but his pages are replete with terse discussion of military plans and performance. Not since Grant's Memoirs has there appeared any book relating to the great war possessing the interest of Gen. Wilson's. His experiences from 1861 to 1865 were singularly varied. He graduated from the Military Academy at West Point near the top of his class. He served under Hunter and T. W. Sherman on the coast as chief topographical engineer, as assistant engineer on McClellan's staff at Antietam, as engineer on Grant's staff at Vicksburg and in the Chattanooga campaign, as chief of the Cavalry Bureau at Washington, as commander of a cavalry division under Sheridan in Grant's '64 campaign, and under Sheridan in the Shenandoah Valley, and as the chief of a cavalry corps under Thomas at the battle of Nashville and in the pursuit of Hood. Finally, at the head of an army of some 14,000 troopers, he defeated the redoubtable Forrest and captured Selma, Montgomery, and Macon, and ran down Jefferson Davis.

It is doubtful if any other officer saw so many phases of the war or was brought into closer contact with so many of its leaders, civil and military, or won the confidence of so many of the great captains in the East and West. When the war closed, Gen. Wilson was not yet twenty-eight years old. Opportunities for service, observation, and fame so extraordinary had, of course, obvious advantages, but, on the other hand, they tended to prevent the development in this officer of that *esprit de corps* which was so strong, for instance, in the Army of the Potomac, and which at the close of the war made advisable a wider separation of the armies of Meade and Sherman, after both had reached Washington and the rivalry between the two armies began to take unpleasant shape. The spirit of the free lance is manifested in every chapter of Gen. Wilson's book. Gen. Thomas alone draws forth the author's complete approval and admiration. He thought him more like Washington than any man he had ever met. It was under Thomas that Gen. Wilson had opportunity for his most important service, and for winning a separate renown. He becomes fairly indignant at Grant's treatment of Thomas before the latter's great victory over Hood at Nashville in December, 1864. He says that Grant lost his head and did not know the situation, and attributes Grant's covert hostility to Thomas to the fact that when Grant first reached Chattanooga in the autumn of 1863, wet and hungry, tired and lame, Thomas, by some curious *faux pas*, failed to offer him food or dry clothing. The obvious comment upon the incident is that Washington, under similar circumstances would have been a more hospitable host. Gen. Grant had his favorites among the army commanders, and his liking was far from being based exclusively upon military performance.

Not many years ago the author's comment upon the leaders in the great war would have started excited and angry controversy, and yet, in the main, his criticisms do not go beyond the fact. Sherman's brilliant mind, he says, was destructive, not constructive. Sherman is declared to have been slow on the march to Chattanooga, and again at Missionary Ridge he is arraigned for being slow and ineffective. His famous march to the sea, leaving the main task and responsibility, that of disposing of Hood's army, to Thomas, is commented upon briefly and harshly. Sherman, the author says, was not the man for bold and conclusive operations. It is upon Sheridan, however, that the criticism, direct and indirect, falls most heavily. He gives Sheridan occasional words of hearty, general praise, but his specific statements and his presentation of evidence mostly lead in the opposite direction. It is said on good authority—not by Gen. Wilson—that Sheridan could not read a topographical map. His mental processes were of the most primitive kind. In his memoirs Sheridan advanced the curious idea that, as he had found different columns of troops marching on parallel roads often failed to coöperate, he stretched his command out on one road. Wilson refers to Sheridan's leaving the battlefield at Chickamauga and marching round without authority. He says that Gordon Granger had "fully as much courage, more brains and a far more impressive figure and appearance than Sheridan," but fell below him in cheerful alacrity and readiness. Sheridan's partial cavalry raids under Grant, the futility of his efforts to destroy the Confederate railways north of the James, his discomfiture at Hampton's hands from Trevilian-station to White House, and the slowness of his movements in the Shenandoah Valley, all have their share of direct criticism, but it is Sheridan's failure to obey Meade's urgent and repeated orders to go to Wilson's relief in the latter part of June, 1864, that draws forth the author's harshest condemnation.

On June 22, Wilson had set out with less than 6,000 troopers to destroy portions of the Lynchburg and Petersburg and the Richmond and Danville Railways. Meade had desired that Sheridan should remain north of the James to keep Hampton occupied, or that Sheridan and Wilson should move together towards Hunter at Lynchburg from the south side of the James. Wilson, himself, said at the time: "If Sheridan will look after Hampton, I apprehend no difficulty." But Sheridan crossed to the south side of the James, and this false movement left Hampton free to go after Wilson. The latter destroyed some fifty miles of railway, but Hampton pressed him hard, and Wilson's escape with the loss of a dozen guns and his wagons was only brought about by his rapidity and energy. The author quotes at considerable length Meade's orders to Sheridan in an emergency calling for prompt movement. His strictures upon the insubordination of the corps commander, who seems to have counted confidently upon Grant's approval of anything he might do or fail to do, are not more severe than the facts warrant.

Gen. Wilson thinks that Lee's virtues as a soldier are now much magnified. Gen. Scott, he says, was fully Lee's equal as a soldier and far greater than Lee as a patriot. He pronounces Scott's conquest of Mexico to be a performance of the first rank, and he adds, "That is more than can be said of Lee's best campaign."

It was in November, 1862, that Wilson became chief topographical engineer of the Army of the Tennessee, and then made the acquaintance of Rawlins, who "better than any one else understood Grant's strength and weakness." Rawlins told him that there was enough in the current stories about Grant's habits to make his true friends "do all in their power to keep him from falling." He wanted Wilson to help him clean out from Grant's staff the men on it who tempted their chief to drink. Gen. Wilson says that he got the impression that Grant was neither a great organizer nor much of a theorist in military matters, and he adds:

> This opinion grew gradually into a settled conviction, and in spite of his great achieve-

> ments, which were won mainly by attention to broad general principles rather than to technical details, I have never had occasion to change materially these earlier impressions.

Pemberton is declared to have outwitted Grant in the terms of the surrender of the former's army at Vicksburg. The surrendered troops were soon fighting again.

Both Rawlins and Bowers, of Grant's staff, told Wilson that on the night after Gordon had turned Grant's right (Sedgwick's corps) in the Wilderness, and disaster for a time seemed imminent, the Lieutenant-General threw himself face downward on his cot and gave way to the greatest emotion. They added that they never before had seen him so deeply moved, and that he did not regain his composure until it was manifest that the danger was over. Gen. Wilson does not enter at length into the causes of this emotion. From other sources we know that Grant said he had never seen such fighting. He had told Meade that he did not want the army manœuvred for position. The day's experience and narrow escape from disaster must have caused something like a mental revulsion. Or it may be that Grant had felt an unusual degree of responsibility for the exposure of Sedgwick's flank.

It would be unjust to the author not to refer to his high appreciation of Gen. Grant, to the general praise which he bestows upon Sheridan's "aggressiveness," and to his admiration for Upton and other less-known commanders. There are occasional slips of the pen. On p. 377, Vol. I, Mine Run is said to have stayed Meade's unfortunate "mud campaign." The "mud campaign" was made by Burnside after the battle of Fredericksburg. The roads were fair during the Mine Run campaign, and it was stayed by one of the corps commanders taking the wrong road. The reference to the South Anna River, p. 421, Vol. I, should be to the North Anna. "John S. Pemberton," p. 573, should read John C. Pemberton.

The pages given to the Spanish War dwell upon the mismanagement of the War Department, the absurdity of Shafter's appointment to chief command in Cuba, the insignificance of the services of Wood and Roosevelt, and the general incompetency manifested in many directions. On the other hand, the conduct of military and civil affairs in Porto Rico is highly praised. Miles and his subordinates managed every detail methodically and efficiently, the reader is told. It is pointed out that there was little illness among Miles's troops and no occasion for a "round robin" or for recuperation at Montauk Point. Gen. Brooke's administration of a year in Cuba is commended as faithful and conservative, its chief difficulties being attributed to the fact that President McKinley had no definite policy and gave the military commander no clue, as to what the morrow might hold for the island. The author does not think that McKinley was the most virile of American statesmen.

In the "Boxer" war, Gen. Wilson was placed in command of an expedition of American and English forces, and after he had easily defeated the insurgents at the Eight Temples, a dozen miles northwest of Peking, he was amazed by a request from the British adjutant-general for permission to destroy the beautiful white porcelain pagoda, which had stood on the hilltop for a thousand years. Gen. Wilson refused, and withdrew his troops. The British then blew up the pagoda, and the correspondent of the London *Times* telegraphed his paper that the Americans had done it. The allies, we are told, looked on the act as discreditable to the British officers and the civilization which they represented.

Thrown, as Gen. Wilson was, into personal contact with Lincoln, Stanton, and a long list of famous or well-known civilians, these recollections of a varied life in times of peace and war have not a dull page. There were great soldiers of the period—Thomas, Meade, Hancock, and Sedgwick—who wrote little or nothing of their experiences outside of their official reports. Sedgwick, his biographer says, "grew in silence" as he grew in years and responsibility. Perhaps, the verdict with some minds will be that the soldiers who remained silent under misrepresentation and misunderstanding, who did not air their grievances, but were satisfied to let their work speak for them, are entitled to respect for their forbearance and dignity. The opposite view is expressed in a regretful letter, unpublished, from Gen. Orlando B. Willcox to Gen. Humphreys, in which the writer said he had been perhaps too indifferent as to future reputation, that the efforts of certain soldiers to sound the trumpet of fame had been distasteful to him, but that he had come to see how public opinion, year after year, simply deepened impressions which some of the high officers took every pains to start while the war was actually going on.

At all events, Gen. Wilson's book justifies itself by its vigor and great interest. It presents evidence and analysis in every chapter which the historian will have to consider and use. That he has applied the open sesame to the secret of the failures in Grant's Virginia campaign we are not satisfied. Gen. Francis A. Walker thought that either Grant or Meade could have done better separately than both did together. Gen. Henry J. Hunt, the greatest of America's artillery officers, wrote after serious study of the campaign that Grant should have stayed at some point where he could have had prompt communication with all the armies and that Meade would have done better unhampered by the presence of the lieutenant-general. Col. Carswell McClellan, of Humphreys's staff, and others have put on record similar views. The faults of the dual leadership were not diminished by the perfectly human but none the less harmful activity of the coterie of men immediately surrounding Gen. Grant. One of them, Badeau, is said by Gen. Wilson to have been "vain and narrow." His writings on the campaign are now disregarded, but they reveal an unfortunate attitude of mind and misdirected zeal which were not confined to him alone. While rejecting such evidence as Badeau's as inexact, partial, and spiteful, the latter-day historian nevertheless adopts the conclusions to which such false testimony leads. Stephen Crane's exclamation, "There is nothing left but opinion, and opinion be damned," may express a momentary truth, but Gen. Willcox's letter, heretofore quoted, gave utterance to a truth with a longer life. The historian writes back to the opinion. Perhaps he fears to run counter to it. The courage of Gen. Wilson's book is as remarkable as its vitality.

CURRENT FICTION.

Promise. By Ethel Sidgwick. Boston: Small, Maynard & Co.

Le Gentleman. The same.

Herself. The same.

The three novels thus suddenly in hand are, it seems, all that this new English "discovery" has to her credit. She is not an altogether surprising discovery. Miss Ethel Sidgwick is daughter of an Oxford scholar, Arthur Sidgwick; niece of the late Prof. Henry Sidgwick of Cambridge; and cousin of the Bensons. She has been a teacher in a number of girls' schools, in England and France: a fact which accounts in part, perhaps, for the subtly Brontesque flavor of these stories, especially the last of them, "Herself."

The American publishers state that these three novels were written in two years. At all events, they were published in England within that time, and scored an immediate and unusual success. We have not had to wait so long for them as we often do for English successes, and it is to be hoped that we may not have to wait at all for whatever this writer may do in the future. For her work is of unusual quality, remarkable not only as the work of a new writer, but on its own merits.

"Promise," the first of the novels in order of publication, treads dangerous ground. We have had frequent occasion to complain, recently, of the feeble and enfeebling attempts of current novelists to interpret "the artistic temperament." Repeatedly, we have been asked to interest ourselves in essential weakness and pusillanimity for the sake of a merely alleged merit. This is the result of a general confusion, fostered by feminine novelists, of the unconventional and the irresponsible. Miss Sidgwick's young genius is queer from the point of view of the parent and the schoolmaster, freakish in the eyes of the ordinary boy. But this, we are gradually led to see, is due not to lack of balance, but to an instinct towards what is big and natural. "Tony" is saner than his fellows, not less sane, and this, in the English public school which is the scene of the greater part of the story, means much trouble for Tony. Finally, his father, the sound, solid Briton, who figures in each of these stories, sees that his beloved school, the school in which his clever—and merely clever—older son has so capably carried on the traditions of the line—is "wasted on" the younger. "I guess," he says, with his slow and sure comprehension, "there are just a few people born wanting things real from the start—won't stand imitations at any price." We leave Tony, as we find him, a child of promise. His work is yet to mature, his public to be won; but we have confidence that something fine and noble is to be looked for from him, and that the inner rewards of the true artist's career are to be his.

The sound, solid Briton is the hero of the other two novels. "Le Gentleman" is Mr. Alexander Fergusson, a Scot, who has engaged himself to marry Miss Meysie Lampeter, a pretty, flighty, shallow English girl. She is studying art in the Quarter, and he has been dispatched to Paris by her anxious mother to keep an eye on her. Nominally, he is studying at the Sorbonne. Miss Meysie has involved herself with a studio set, and is in danger of compromising herself with a clever and unprincipled painter, with whom she is undisguisedly in love. The good Alexander, for his part, has a fellow-student at the Sorbonne, a charming French girl, who is everything in character that poor Meysie is not. Alexander presently discovers that his feeling for Meysie is really paternal: true love, heroic love, the grand passion, submerges him and his Henriette. Here would be, one would think, a chance for a fresh and vigorous ruling on the part of the author of this situation. But no: the Brontë sisters could not have held closer to tradition. Our Alexander, out of a false sense of loyalty, is permitted to abandon the woman he loves in order to become the permanent guardian of foolish Meysie. When shall we get rid of the convention that it is a noble thing for a man to marry one person when he wants to marry another? The detail of the story is fresh and delightful.

But it is the third and latest novel, "Herself," which is the most charming of the series. Herself is a little Irishwoman, Harriett Clench, whom we discover teaching in a girls' school at Versailles. Her father is a roving blade, devoted to her when it occurs to him to be, but subject to long lapses of absence and silence. She adores him, and has the clan feeling so strongly that it colors her whole mind. The Clenches are "collectible," they have a touch of the boy Tony's quality, and people outside the clan, to interest her feelings, must be "collectible" too. They must "want things real." The young sculptor-cousin whom she finds in Paris has the quality, and for that reason is at liberty to make her the victim of certain other Clench qualities. Fortunately, she has already met her own sound, solid Briton, and is safe from young Pat in the rôle of lover. However, he succeeds in compromising her in eyes both French and English, and she has more than one distressing experience of woman's inhumanity to woman before, with the return of the prodigal father and the death of luckless Pat, the way grows clear for the happiness of Harriett and her Briton. The charm of the book is in its quiet, quaint flavor, its new and unlabored tang of style in the best sense of the word.

The two earlier novels are imported. The third is issued in an American edition.

The Unknown Quantity. By Henry van Dyke. New York: Charles Scribner's Sons.

Dr. van Dyke disclaims an intention to deal with "the occult" in these stories, or with the strange occurrences which are the subjects of "psychical research." But there are, he says, mysterious incidents in the lives of all of us, "human and familiar things, quite natural and inevitable as it seems, which make us feel that life is threaded through and through by the unknown quantity." Among them, to go by the present book, are various dreams and portents, coincidences and minor illusions, capable of a mystical interpretation. A number of the stories are based on Canadian legends which might fairly come under the head of the "psychic." Others, like "The Sad Shepherd" and "The Mansion"—both of which have been published in separate form—are confessed parables The groups of "half-told tales" interspersed here and there are fables chiefly set in that day of chivalry which is so tempting to the modern fabulist. But long or short, of modern or antique setting, these tales have the familiar flavor which has given Dr. van Dyke his popular audience—a flavor of doubtless sincere, but somewhat unctuous, sentiment. He has the easy fluid style which is so rare among Americans and so frequent among Englishmen. It is comparable, for example, to that of Mr. A. C. Benson, with whom Dr. van Dyke has several qualities, or tendencies, in common. Tendencies is the better word, for the Englishman's mysticism goes deeper than the American's, and he less frequently strays over the perilous boundary between sentiment and sentimentalism.

The Soul of a Tenor. By W. J. Henderson. New York: Henry Holt & Co.

The unrivalled vocal powers of "Leander Barrett, of Pittsburgh, Pa., had conquered the world," but his soul still slept. He was Baroni, greatest of living tenors—to metropolitan audiences—but not yet a true artist. The damning truth was not generally suspected, although three people knew it for a certainty. His bride, who was a distinguished carpet manufacturer's daughter and a paragon of beauty, intelligence, and ideality to boot, soon realized with grief that her husband saw nothing in an opera but "voice effects" and an opportunity for his own popular success; and that he took no thought at all for "the glory of the master who wrote the work." A solitary young critic whose physical habitation was in New York, but whose spirit "dwelt in a little world colored by the rays of his own imagination," felt within him a growing conviction that "Leander was a self-centred epitome of artistic insincerity." And Nagy Bosanska, the gypsy prima donna, a green-eyed and excessively temperamental charmer, roundly termed him "a great baby." There was little that the first two could do for him, it seemed; it was the Bosanska who really took him in hand. She had a fine oracular way of referring to herself as "I, Nagy," and boasted herself an adept in forming the masculine mind. After he had gone in thrall to her for the better part of a year, during which they extended their joint professional triumphs to South America and over most of Europe, while the discarded wife had a winter of Parisian social success, Leander's soul began to show signs of life. During their Neapolitan performance of "Carmen" it suddenly sprang into full consciousness. So greatly had the year's tuition enriched his emotional nature that upon recognizing his wife in the audience he fainted dead away in the midst of Act ii, and enlivened the business of the final act by mauling Nagy with more than simulated violence, "shaking her like a leaf, and almost flattening her face against the boards." At this point repentance sets in; gently but firmly he dissociates himself from the still amorous Nagy, and betakes himself to solitude and studious meditation. With prayerful humility he addresses himself to the interpretation of Wagnerian rôles. A year later he returns to New York, to sing Tristan at the Metropolitan and go on his knees to his wife with equally gratifying results.

This puerile tale is liberally interlarded with musical allusions, odds and ends of information, and critical opinion. Here and there its poverty-stricken pages are diversified by a purple patch—as when we read that "their conversation . . . was composed chiefly of a richly instrumented silence with occasional flashes of recitative." In short, it is the word of one whose facility does not extend to novel-writing and who upon entering the field of fiction finds himself lamentably straitened in both imagination and phraseology.

PRINCELY LOVERS.

The Love Affairs of the Condés, 1530-1740. By H. Noel Williams, author of "A Princess of Adventure." With 17 illustrations. New York: Charles Scribner's Sons. $3.75 net.

Mr. Williams's book has a better claim to the attention of the serious reader than the promise of a *chronique scandaleuse*, extending over two centuries in a single family, that is offered in the title. It is, in fact, a history of the House of Condé from its origins in the early sixteenth century to the death of Louis Henri de Bourbon-Condé, Duc de Bourbon, in 1740, and of the part it played in the affairs of France during the reigns of a dozen French kings. This part was not always capital, but it was never wholly insignificant, and at times, especially in the person of Louis de Bourbon, *le Grand Condé*, it became glorious. The love affairs of these princes add perhaps a little interest, but not much lustre, to their careers; for there was never much capacity for a *grande passion* among them, except in the case of their greatest representative, and these affairs seldom rose above the level of ordinary *liaisons* among men of their rank, and often descended to vulgar intrigue and the pleasures of sensual indulgence. The depths are associated with the heights in the person of *le Grande Condé*, who runs the whole gamut of his family's vices and virtues. The sensible *chevalier* of Mlle. Marthe du Vigean, who once swooned at the feet of that lady on taking leave of her, could become the lover of Ninon de l'Enclos, and even enter upon a course of dissipation such that his father felt obliged to remonstrate with him in the following strong terms: "My son, God bless you. Cure yourself, or, it is better to poniard yourself than lead the life that you are doing. . . . I pray God to console me. I write to you in despair, and am, Monsieur, your good father and friend . . ."

More typical of the family temperament at its ordinary level is the first Condé, Louis I de Bourbon. This famous Huguenot leader in the Wars of the League and companion in arms of Coligny, stands for all that the Valois age meant in the history of French society—the ideal of heroic valor on the battlefield, love of physical beauty, and instinctive pursuit of pleasure. Surely, Catherine de' Medici showed herself an astute student of the psychology of her age when she organized her *escadron volant*, and transformed her court into a multiple Armida's bower for the purpose of distracting the knights of the new Calvinistic crusade from their high resolves. In vain Bèze, and even Calvin himself, summoned Condé from his inglorious dalliance and repose under the spell of his siren, Isabelle de Latour-Limeul, and overwhelmed him with reproaches for bringing scandal upon the Religion. There is something almost comic in the despair of these great divines expostulating with the *enfant terrible* of their camp, wringing their hands and tearing their hair over his escapades, yet descending to play the politician with so illustrious, if lukewarm, a defender of their cause, for fear of alienating him and driving him into the arms of their enemies. Truly, the Reformation in France brought into play an extraordinary variety of mixed motives, and the whole spectacle of the civil wars, with its chaotic confusion of humanistic refinement and coarse brutality, of fanatical devotion and cynical *désinvolture*, of spiritual professions and sensual practices, is a picture for the pen of a Maurice Maindron, rather than for that of a staid and sober writer like Mr. Williams.

This Louis I de Bourbon was the founder of the House of Condé. He was the fifth son of Charles, Duc de Vendôme, brother of the Connétable de Bourbon, who was killed at the assault of Rome in May, 1537. As none of the Constable's possessions passed to the surviving branch of the family, the Condé line, like that of the Bourbons which rose anew from Louis's eldest brother, Antoine, father of Henry IV, made a humble start in life. And we have only to contrast the later wealth and magnificence of the family with its modest débuts when "Louis Mr. de Vendôme" was inscribed as "gentleman of the chamber to the King, at a salary of 1,200 livres," to see that thrift and consistent self-seeking were by no means insignificant traits of the Condés. And yet, on the whole, they all seem to have had a rather exceptional standard of honor and loyalty and a lofty ideal of service. They received vast possessions and high dignities from the Crown, but they paid well for what they obtained, and seldom forgot that they were Princes of the Blood; and when they pledged their word they generally kept it. Several of them suffered imprisonment for a time, and one of them, Louis, the founder of the family, nearly lost his head during the ascendency of the Guises in the reign of François II. It was only the death of that monarch and the downfall of the Guises that saved his life.

But it was Henry II de Bourbon who came into most curious conflict with royal authority, and with the best provocation on his part. His father having died—by poison, it was thought, and administered, some said, by his own wife—the young prince was brought up by Henry IV, who treated him with marked consideration and kindness until the youth's marriage with Mlle. de Montmorency, daughter of the famous Constable. Now it was the King himself who arranged this alliance, which was accepted by the Prince against his inclination, as his heart was already engaged, and in total ignorance of the real motives that lay behind it in the royal mind. The fact is that Henry had already fallen desperately in love with Charlotte de Montmorency, and had taken what he conceived to be the best means of keeping her near his person. But he counted without his accomplice. When Condé got an inkling of the true state of affairs, he fled with his wife to Brussels, and then began one of the most curious series of adventures and intrigues upon which a triangular royal romance was ever launched. It was complicated by the fact that the Condés were not in love with each other, so that it was less jealousy than a sentiment of personal honor that stiffened the resistance of the Prince. An attempt was actually made to abduct the Princess, and the King, believing that his arrangements could not fail, sallied forth on the highroad, decked out in unaccustomed finery, to meet her. His chagrin when she did not come was intense.

This fugitive couple were the parents of the *Grand Condé*. The future general's father himself superintended the education of his son and trained him for his famous career on the battlefield. Later, Condé tried the same course, first with his own son, Henri-Jules de Bourbon, and afterwards with his grandson, Louis III. Though he had somewhat greater success in the second case than in the first, the results, historically, are much the same. The story of the last Prince de Condé here treated is one rather of political intrigue, during the Regency and the early reign of Louis XV, in which he was associated with his famous mistress, the beautiful Agnès Berthelot de Pléneuf, Marquise de Prie, than of military glory. In his son, Louis Joseph de Bourbon, however, the military strain cropped out once more and made the bearer of the name of Condé play a gallant part in the wars of the French Revolution. For some reason, however, the author has chosen not to include him in the present account of the house. Perhaps it is to provide material for another volume. Or perhaps, more logically, it is because with Louis III ends that chapter of the family history of the Condés which, for more than two centuries, was so closely connected with the fortunes of monarchy in France under the old régime.

Concentration and Control. By Charles R. Van Hise. New York: The Macmillan Co. $2 net.

President Van Hise calls this work "a solution of the Trust problem in the United States." Four-fifths of the book is devoted to general facts regarding concentration (causes, methods, kinds, and extent of concentration, etc.), to an outline of certain of the great combinations (the salt, oil, steel, tobacco, sugar, packing, lumber, water-power combinations), to laws concerning coöperation from the time of Edward VI to the present, and to a survey of the situation regarding industrial concentration in other countries. The remaining portion of the book is given over to "remedies." This is the least valuable portion of the work. In its other parts the book will be found exceptionally serviceable. President Van Hise is always indefatigable when in pursuit of facts, and never has he been richer in them than in the present case.

The book was, however, written in too great haste. The author declares that no one can have a keener realization than himself of the imperfections of the volume, but that "since the policies of the nation concerning concentration are now under consideration by the people, promptness in publication seems to be more important than completeness of statement." Yet it is not in Mr. Van Hise's statement of the facts of concentration that lack of completeness is felt, but in what he has to say on remedies for the Trust situation.

It is as a constructionist that he fails. Yet he fails no more signally than others who have grappled with this problem. And he is saner than some; for while he is an advocate of control, he is not an enemy of concentration and coöperation. Concentration, coöperation, and control are, apparently, in his estimation, the three fates in the life of modern industry—the first to procure us the economic advantages accruing from magnitude of operations, the second to limit the wastes of the competitive system, the third to ensure freedom for fair competition, elimination of unfair practices, conservation of our natural resources, fair wages, good social conditions, and reasonable prices. Concentration and competition we must have if we are going to maintain a footing in the world's markets; but if we allow these there must be control in order to protect the people, and adequate control is only possible through the administrative commission.

Here we have President Van Hise in a nutshell. The difficulty with his theory, as with that of everybody who would better the situation, is that it tells us what we ought to have without telling us the right way to get it. What the economic situation of modern days calls for is an intellectual giant, a mind of Napoleonic grasp. Here, if anywhere, is a need for a genius of the first order. Until such a genius appears we must be content with a *modus vivendi* evolved from pure opportunism. It is that policy which dominates President Van Hise, as he himself declares. The present work leads us, however, to infer that with him opportunism is a philosophy rather than a science—a thing based on knowledge of causes, not a thing of laws "digested and arranged into a system."

The Life-Boat and its Story. By Noel T. Methley. Philadelphia: J. B. Lippincott Co. $2 net.

Mr. Methley's book is of wide scope, although his story is compressed into three hundred pages. Naturally, because he is an Englishman, and because England has been a pioneer in the development of appliances for saving life at sea, the greater portion of the volume is devoted to the work of the life-boat in that country; but the author is by no means insular in his survey, and has been at pains to obtain exact information as to the methods in vogue in every country where the life-boat is in use. An interesting chapter is devoted to the United States, where the system differs from that adopted elsewhere in being entirely state-controlled and served by regular crews paid by the Government. Any other system would in this country be impossible, on account of the enormous extent of coast-line and the lack in many parts of a 'longshore population. It is satisfactory to find Mr. Methley testifying warmly to the efficiency of our service. "During the thirty-six years," he says, "following its inauguration, only 1 per cent. of the lives imperilled has been lost. It is a marvellous record when we consider the fact that over 121,000 was the number of those shipwrecked on the coasts which came within the scope of the service's operations."

As is inevitable, a good deal of the book is of a technical character, but technicalities of the sea never seem to weary as do those of other professions; and Mr. Methley has, in common with many other writers on subjects connected with the sea, a simplicity and directness of style which make even the technical passages of his book easy to read. One such chapter, indeed, which he calls Freaks and Oddities, is not only very readable, but exceedingly lively. Describing one of the numerous inventions that have not even to be tried to be found wanting, a bottomless boat in this instance, he says: "It was made entirely of wrought and sheet iron, covered and lined with strong netting; why," he adds, "it is difficult to say, unless it was to avoid losing the bits if it got broken."

From the large mass of material at his disposal, Mr. Methley has made a judicious selection, and the stories that he retells of notable rescues effected by life-boat crews are every one of them of absorbing interest. The launch of the Lynmouth life-boat to the rescue of the Forrest Hall off Porlock, on the coast of Somerset, is typical of the heroic and arduous work that the crews are called upon to undertake. In this case the boat had to be taken fourteen miles by road over one of the steepest hills in England in the teeth of a gale. "To add to the difficulties, the road was in places too narrow to admit of the carriage passing. The boat had to be dismounted more than once and heaved forward on rollers, while the carriage was taken by a detour over fields and moorland. In spite of these harassing conditions, the feat was accomplished in ten and a half hours. Porlock was reached at 6 A. M. There the boat was successfully launched and did her work. She was driven, however, to Barry, upon the Welsh coast of the Bristol Channel, before her crew could rest."

Mr. Methley, of course, writes as an expert, and for those particularly interested in the details of life-boat organization his careful appraisal of the merits of various types of boats and their adaptability to specific conditions will be of the utmost value. For the layman the subject itself is so full of romantic interest that it only has to be well told to chain his attention.

Notes

Sir Arthur Quiller-Couch, who was recently appointed professor of English at the University of Cambridge, has completed "The Oxford Book of Victorian Verse." It will be published immediately by Frowde.

Prof. William Knight is bringing out, through Elkin Mathews, "Coleridge and Wordsworth in the West Country: their Early Friendship and Surroundings."

A timely book among the announcements of Duffield & Co. is "The Orient Question," by Prince Lazarovich-Hrebelianovich, present head of a royal Servian family.

"The Happy Warrior," a new novel by A. S. M. Hutchinson, is announced by Little, Brown for early in January.

This month sees the publication of the following books by Doubleday, Page: "The Book of Woodcraft and Indian Lore," by Ernest Thompson Seton; "American Lyrics," by Edith Rickert and Jessie Paton; "Reminiscences of the South Seas," by John La Farge; "Browning and his Century," by Helen A. Clarke; "The Book of Grasses," by Mary Evans Francis, and a handsome edition of "Æsop's Fables," illustrated by Arthur Rackham.

The Putnams are about to publish the American edition of Ellen Key's "Woman Movement" and the following Cambridge books: "Elementary Principles of the Roman Private Law," by W. W. Buckland; "Lord Chatham and the Whig Opposition," by D. A. Winstanley; "Light on the Gospel from an Ancient Poet," by Edwin A. Abbott; "The Tribes of Northern and Central Kordofan," by H. A. MacMichael; "A History of Geographical Discovery in the Seventeenth and Eighteenth Centuries," by Edward Heawood; "The Problem of Evil in Plotinus," by B. A. G. Fuller; "Essais de Littérature Anglaise," by S. J. Mary Suddard, and "Evolution and the Need of Atonement," by Stewart A. McDowell.

The growing importance of Spitsbergen from a commercial and strategic point of view is shown in the *Scottish Geographical Magazine* for November by one who was in the island this summer, Mr. R. N. Rudmose Brown. Hunting and whale-fishing, which led to its exploitation three centuries ago, have greatly diminished; hunting in fact has virtually ceased from the extermination of the fur-bearing animals. Recently there has been a considerable development of its mineral resources, the Arctic Coal Company, of Boston, Mass., having exported above 40,000 tons this year to Norway. Valuable marble is quarried by a British company. A hindrance to the island's growth is the fact that it belongs to no country, consequently there is insecurity of tenure and the absence of any form of law except usage and might. Attention is also called to its strategical value from a naval point of view on account of its "splendid harbors, unlimited supply of coal, and proximity, with an open route, to western Europe."

The first paper in the October number of the *American Journal of International Law* deals with a matter of great importance. It is entitled "The 'Protocole Additionnel' to the International Prize Court Convention," and is written by George C. Butte, who studies at length how this "Protocole" would affect the interests of neutral commercial nations, as compared with Article VIII of the Prize Convention. Under this article, in case a captured and condemned vessel were adjudicated to have been without fault, and erroneously condemned—that is, if the nullity of the capture were pronounced—provision was made that the Court should order restitution of the ship and cargo, and fix, if there were occasion, the amount of damages; while under the "Protocole" only the amount of damages would be determined, and that amount awarded to claimants. The more advantageous position of the claimant under the former condition, and the advantage the illegal captor would have under the latter, are clearly brought out. So it might be to the advantage of such a captor to obtain, for immediate hostile use, the vessel captured, the question of damages being one of secondary importance to him, especially as the damages awarded might never be paid at all. Earlier papers have revealed the fact that those who favored endowing a Prize Court of Appeal with adequate jurisdiction, had encountered the objection that it might be difficult to submit to it a question or case that had been passed on by a highest national court of appeal. This is an obstacle which American diplomatists, together with others, had sought to remove by the provision that cases should be submitted to the Prize Court of Appeal, not as cases on appeal, but as cases *de novo*. This paper discriminatingly discusses this whole question. Due emphasis is laid on the fact that under the "Protocole" the belligerent captor, though the proposal was no doubt designed to exclude such a possibility, might appropriate illegally the captured property. Yet it is a well-settled principle of international law, as old as Sir William Scott, that no belligerent has a right to destroy—or presumably to appropriate—a captured vessel before it shall have been condemned by a prize court; a humane principle dictating that a belligerent who thus behaves, puts himself out of court and subjects himself to heavy damages and costs, irrespective of whether his capture was originally valid or not. Under the "Protocole," on the other hand, a captor can be mulcted in damages only on its being adjudicated that the capture was illegal.

The essays which go to make up the eleventh volume of the collected works of Ambrose Bierce (Neale Publishing Co.) are characteristic exercises in anti-popular journalism. It was the misfortune of Ambrose Bierce to have been born a pessimist in a nation where optimism is as incumbent as any one of the Ten Commandments, and an enemy of democracy in the most populous democracy in the world. Ambrose Bierce's weapon is sarcasm; not the devitalized sarcasm which is used, indiscriminately with satire and irony, to denote the gentlemanly avoidance of calling a spade a spade, but sarcasm in its etymological sense, a stout wielding of the lash that raises the raw. Mr. Bierce, it is true, has his gentler moments, when he merely blisters instead of flaying. He has a robust playfulness that reminds one of the eighteenth century controversialists.

Snobbery in a democracy raises Mr. Bierce's particular ire. In an American newspaper he once came across a portrait of "her whom the irreverent Briton had a reprehensible habit of designating colloquially as 'The Old Lady.'" The American editor had put under the portrait "Her Most Gracious Majesty Queen Victoria." "Is it better to be a subject and a man," asks Mr. Bierce, "or a citizen and a flunkey?" And he draws a parallel between this country and Europe which is not flattering to American pride:

> However it may be customary for English newspapers to designate the British sovereign, they are not, at least, addicted to sycophancy in designating the rulers of other countries than their own. They would not say "his Abracadabral Humptidumptiness Emperor William," nor "his Pestilency the Speaker of the American House of Representatives." They would not think of calling even the most ornately self-bemedalled American sovereign elector "his Badgesty." In brief, in mentioning foreign dignitaries, of whatever rank in their own countries, the English press is simply and serviceably descriptive: the king is a king, the queen a queen, the jack a jack.

Mr. Bierce's point is undeniably ill-chosen and overstated; but it is overstated with undeniable vigor and pungency.

Gius. Laterza & Figli, of Bari, Italy, have just added to their important series, Scrittori D'Italia, the following two volumes: "Giuseppe Baretti: La Scelta delle lettere familiari," edited by Luigi Piccioni, and the second volume of Giovanni Berchet's works—"Scritti critici e letterari," edited by Egidio Bellorini.

The latest edition of the "Catalogue of the Harvard Chapter of Phi Beta Kappa" (Riverside Press) is the first since 1902, and the fifteenth since the beginning of the series in 1806. It is of greater interest than any of its predecessors, since, in addition to the usual lists of names, it contains extracts from the records of the Society. This section, constituting nearly half of the volume, begins with the charter granted by the College of William and Mary to "the University of Cambridge in the State of Massachusetts Bay" in 1779, and includes contemporary accounts of many of the meetings of the Harvard Chapter since that time. In many cases these are as entertaining as they are important historically. The book is illustrated with contemporary pictures of the various Harvard and Cambridge buildings that have sheltered the annual functions of the organization. The editor is the secretary of the Society and the librarian of Harvard, William Coolidge Lane.

"Cheiro's Memoirs" (Lippincott) is a shrewd account of the famous society palmist's experiences with many distinguished persons, so shrewd as to give little insight into the sources of his popularity. A partial explanation, aside from his canniness, lies in the mystic and somewhat fanatic religious element in his nature. He was trained for the English Church, and first earned his bread and butter by writing devotional verse. He soon adopted a fatalistic belief in the occult. It had been prepared for in childhood by his mother, who inducted him into the mysteries of palmistry. It was deepened by Eastern travel, he avers, which initiated him into what is apparently a genuine faith in the efficacy of mystic numbers to reveal the future. At any rate, it was his skill in interpreting these wonder-provoking symbols that for a time made him an indispensable feature of every correct social function in London. Unsatisfactory as the book is as a revelation, it contains many an interesting page for the cursory reader. The start he made under a twelve-year contract with a wily Hebrew is, unconsciously, amusing enough. There is also a curious narrative of his alleged part in promoting the *entente cordiale* between Edward VII and France. Two meetings with Oscar Wilde, one at the heyday of his success and the other a few weeks before his death, are impressive. The origin of the idea for "Pudd'nhead Wilson" is revealed in an interview with Mark Twain. In short, this society palmist has used his art to gain close, even if temporary, acquaintance with numerous and varied persons of celebrity.

John A. Shields has written a book which he calls "Federal Courts and Practice" (Banks Law Pub. Co.). A more accurate title would be "Some Scraps of Information, Useful and Useless, About Federal Courts and Divers Other Things." From its outward appearance, including binding and labels, one would suspect it of being a law book. Such suspicion is checked, however, when the volume is opened, and wholly dissipated by a careful examination of its contents. History, biography, and anecdote abound. We have the names of all the Federal Judges, as well as those of the United States Attorneys and Marshals, interspersed with comments which are not always accurate. For example, the author refers to "General Benjamin F. Butler" as one of the successors of Edmund Randolph, "who later became noted"—not knowing that Attorney-General Butler was the distinguished New York lawyer of an earlier generation than "General Butler," of Massachusetts. But the author does know, he assures us, that "The Attorney-General of the United States is titular head of the ramifying machinery of procedure in law appertaining to the executive division of the Government"! Occasionally a reported case is cited, but in a casual manner, and never for the purpose of supporting a proposition of law. The author's unaided dictum is deemed ample for that. Half of the volume is taken up with "Trust Prosecutions, Decisions and Decrees"; yet no attempt is made to analyze the decisions or to discover the legal principles which they establish. Part third is entitled "Syllabus of Equity, Jurisdiction, Pleading and Practice." Why the comma is inserted between "Equity" and "Jurisdiction," we do not know. Nor do we know the writer's authority for any one of the multitudinous propositions enunciated under this heading. For some of them we are sure he has no authority. At p. 642 he declares: "There is but one case upon record in which any court of equity, either in this country or in England, has attempted by injunctions or order of the court, to prohibit or restrain the publication of a libel as such in anticipation." Evidently, he has not kept abreast of modern English legislation and decisions. He has only to consult the latest edition of Odgers on "Libel and Slander" to find repeated examples of such injunctions. Indeed, we had supposed it to be a matter of elementary legal knowledge that, whereas in this country an injunction will not issue to restrain the threatened publication of a libel, it may and does issue in England.

Dr. Daniel McGilvary's posthumous book, "A Half Century Among the Siamese and the Lāo" (Revell), describes his life as a missionary. He was the leader in the Lāo work which now controls five hospitals and a leper asylum, eight boarding-schools and twenty-two elementary schools, and twenty-one Presbyterian churches, with 4,205 communicants. Wherever Dr. McGilvary met with opportunity for permanent work, stable congregations were founded. If the facts have been rightly presented, it would appear that both Buddhism and animism have reached a stage of extensive "dry rot" in Siam, for many of the conversions were gained at an astonishingly small degree of religious sacrifice. It may be that the conditions here were analogous to the widespread decay of the native religions in Polynesia when the missionaries arrived there; or, it may be queried whether the Siamese and Lāo really comprehended the wide divergencies which actually exist between Buddhism and Christianity. While Dr. McGilvary appears to have had no deep understanding of the religions which he sought to overthrow, and while his volume is disappointingly meagre in the presentation of these older beliefs, there are several pages which should be carefully studied by those who allege the similarity between Christianity and Buddhism, especially pp. 181-185. As a simple Siamese farmer declared (p. 55), "The difference between Jesus and Buddha is that the latter entered into Nirvana, and that was the last of him; while Jesus lives to save." Among the few references to native culture is the very interesting statement (p. 323) that the hill tribe of the Mūsô "have a twelfth-day sabbath, or sacred day, not very definitely marked." For this festival, which seems to bear no relation to the lunar month, the reviewer has been unable to find any parallel. The writer states that "what is required to support one European missionary family, would support half a dozen fairly educated native ministers or ten good native evangelists" (p. 259). It is a question whether the practice of one great Christian communion which has only a celibate clergy might not wisely be followed by other religious bodies in the mission field; and it is generally agreed that the missionaries of the communion referred to live in closer contact with their people than do the Protestant missionaries. There is only the slightest allusion in this book to any missionary work, Protestant or Roman Catholic, among the Siamese previous to the coming of Dr. McGilvary. This is unfortunate.

"John Hancock, the Picturesque Patriot" (Little, Brown), by Lorenzo Sears, is a chatty account of the doings of John Hancock and of the historical events of the time in which he lived. Mr. Sears has evidently made a search for new material, but there seem to have been few letters or papers from which to construct a biography. He is, therefore, often reduced to infer the doings and thinking of Hancock from a knowledge of what was going on around him. Hancock was in London in 1760-61, but of what he did there we know little, and of what he was thinking even less. Yet Mr. Sears makes a chapter out of it by describing what he might have done and seen, and how the experience might have impressed him. "At all events, he must have had an inside view of the situation before he sailed for home," an inside view, that is, of the political situation. But the letter which is quoted scarcely bears this out—he bids "adieu to this grand place, with all its pleasurable enjoyments and tempting scenes." One suspects that the young man enjoyed himself, saw the sights, acquired a taste for London tailors, and—returned home. Mr. Sears has read rather widely, but he does not always reproduce accurately. "The King's first speech was for a 'bloody and expensive war to obtain an honourable and lasting peace,' a stale plea of barbarism." Now, the King's speech was precisely in opposition to a "bloody and expensive war," which he desired to end. The author's understanding of history is superficial and of the conventional sort; his book is anecdotal, without grasp or insight, neither biography nor history in any serious sense of those terms.

"English Fairy Poetry from the Origin to the Seventeenth Century" (Frowde), by Floris Delattre, grew out of the author's elaborate work on Robert Herrick. It is neither an exhaustive history of English fairyland nor an adequate account of the fairy poetry of the period. It is merely a light and graceful essay in 235 pages on the development of fairy mythology, with a pleasant and occasionally suggestive discussion of some of the more important poems. The treatment of the Middle Ages is extremely cursory, and when we come to the Conclusion we are confronted with the astonishing statement that English fairy poetry "but seldom appears in the literature of the Middle Ages, when the little people of the night are still to be dreaded, and it is a man's wisdom to hold his peace about them." M. Delattre appears to regard the Elizabethan as the great age of fairy poetry, and he adopts the popular and pretty thoroughly meaningless generalization regarding it: "It is a period unique in the rolls of English history, when men . . . gave way to their intense imagination, to the passionate dreams of golden islands set in the distant seas, as well as to the hearty enjoyment, unchecked by any discipline, of their daily life, so gross, so turbid, doubtless, but all teeming with full-blooded energy." A kindred looseness of utterance and carelessness about facts allows him to say that Shakespeare's "very words of renunciation to the enchanted work of his life, which he put in the mouth of Prospero, . . . were actually borrowed from countryside legend." As a matter of fact, M. Delattre does not *know* that any of them were borrowed from "countryside legend"; but every schoolboy knows that some of them were actually borrowed from Ovid's "Metamorphoses," and that the general conception of this particular passage is due to Ovid. If, however, the reader treads warily among the generalizations and suspiciously among the details, he may yet be edified by many interesting extracts from old books, an appendix containing a reprint of the unique copy of "A Description of the King and Queen of Fayries, 1635," and a bibliography of texts and critical studies.

The appearance of the second, completely remodelled, edition of Prof. Eugen Kühnemann's "Herder" (Munich: C. H. Beck) has a particular interest for American readers, since it coincides with its author's return to this country for another term of official connection with American university life. The central theme of the book might be stated in the words, "Herder, the John the Baptist of the Gospel of Humanity." The titles of its four main subdivisions—The Beginning, The Crisis, The Climax, The Decay—suggest the rhythmic movement of the whole; and every one of these subdivisions reiterates, in its own ebb and flow, the main current of the narrative. The interest of the first part centres in that memorable sea voyage from Riga to Nantes, on which the youthful Herder, surrounded by ocean and sky, in constant contact with the elements, dreamed his Rousseauistic dream of primitive life. The second part tells of Herder as a *vox clamantis in deserto*, his isolated life in Bückeburg, his strangely ecstatic marriage, his delving into the mysteries of his own soul, and the peculiar warping of his mind which turned the critic and historian into a preacher and prophet. The third part leads us to the height of Herder's life, to his Weimar days, and to his "Ideen zur Philosophie der Geschichte der Menschheit," that memorable attempt to represent all history as an infinitely complex organism evolving itself from the greatest variety of national types. The fourth part shows the prophet of humanity at variance with living men, at odds with his best friends, hemmed in by petty cares and ambitions, weary of a life to which he could not adjust himself. One might object—as indeed has been done—to a certain lyrical ecstasy in Kuhnemann's manner of presentation, which, if long sustained, tends to monotony. But the book has artistic charm, and contains a variety of interesting contributions to the intellectual history of the eighteenth century. Among such, there may be singled out the analysis of Hamann, "the Nietzsche of the storm and stress movement"; the characterization of the Count and Countess of Lippe; the discussion of the curious intermingling of Spinoza and Leibnitz in Herder's conception of the divine; the comprehensive and impartial view taken of the Herder-Kant controversy, and, above all, the truly masterly presentation of the tragic catastrophe of Herder's life, the break with Goethe.

Prof. Albert B. Faust's "The German Element in the United States" (reviewed in the *Nation* of April 7, 1910) has appeared in a German translation, and the volume dealing with purely historical aspects is before us. It bears the title "Das Deutschtum in den Vereinigten Staaten" (G. E. Stechert & Co.), and exhibits in the present garb along with the author's undeniable merits, perhaps more conspicuously than did the original, certain defects to which we called attention. German readers will not easily pardon omissions like that of Hans Kudlich, the most distinguished political refugee Austria has sent to these shores (he is still living in Hoboken, at the age of eighty-nine), and not a few will smile at the glowing eulogy of John D. Rockefeller's charity, for which his remote German ancestry furnishes the occasion. But what will provoke more serious comment is the exclusion, on racial grounds, of men whose eminence is acknowledged on both sides of the Atlantic. Professor Faust is probably unaware to what an extent he has been forced, by the sheer weight of actual achievement, to violate his rule of not "regularly considering," in his two volumes, "persons of Jewish blood, born in Germany." German readers, perplexed by his recital of the deeds of German-Jewish dry-goods kings—whether born here or in Germany—will look in vain for scientists like Simon Flexner, or naval officers like Rear-Admiral Taussig.

The week of November 11-16 saw at Ann Arbor, Mich., the largest convention which the Association of Collegiate Alumnæ has ever held. The most important business before the Association was the reorganization of its constitution. Several important steps were taken. Two new kinds of membership, affiliated and associate, have been created. These new memberships, though admittedly tried as an experiment for a term of five years, are confidently expected to attach several hundred college women to the Association. Certain internal changes were also made which will bring the branches of related geographical sections into closer touch with one another than has hitherto been the case. This will promote greater interest and the formation of new branches. The standard in use for the past three years for admission to the Association of Collegiate Alumnæ, has been that of the Carnegie Foundation, plus certain requirements of the Association. This standard for colleges has, however, limitations necessarily imposed by the Carnegie Foundation, such as a certain financial standing and non-sectarianism. These and some other requirements were not deemed essential criteria for the Collegiate Alumnæ. The Association felt that the colleges forming Class I of the Babcock List of the United States Bureau of Education would, for their academic standing, more nearly approach the standard desired. It was voted that this list should be tried until the meeting in Philadelphia in 1914, with probabilities of its becoming the permanent standard. Also certain colleges now waiting for admission to Collegiate Alumnæ were to be admitted to membership as soon as they had attained the required standard; thus they need not be deprived of the advantages of membership for the two years until the next bienniel meeting. Five colleges were admitted at once—Mt. Holyoke, Swarthmore, Grinnell, Lawrence, and the University of Indiana.

Bishop Herman S. Hoffman, of the Reformed Episcopal Church, who died at Philadelphia on Saturday, aged seventy-one, was the author of one book—"Life Beyond the Grave."

The death is reported from Winterhaven, Fla., of the Rev. Dr. George Augustus Gates, president of Fisk University, Nashville. He was born in 1851 and graduated from Dartmouth College in 1873. He was a leader in the movement for the higher education of the negro, and in "A Foe to American Schools," published in 1897, attacked the methods of the so-called Schoolbook Trust.

William Flavelle Monypenny, author, and one of the directors of the London *Times*, is dead in London, at the age of forty-six. Mr. Monypenny first became known to a large British public as editor of the Johannesburg *Star* in 1899. At the outbreak of the Boer war, he obtained a commission in the Imperial Light Horse and served with that regiment through the siege of Ladysmith. His editorship of the *Star* he resigned in 1903. He was of Irish origin. The "Life of Benjamin Disraeli," which he was engaged in writing, has reached the second volume, just published.

Science

The Story of Evolution. By Joseph McCabe. Boston: Small, Maynard & Co. $3.50 net.

Evolution in the Past. By Henry R. Knipe. Philadelphia: J. B. Lippincott Co. $3.50 net.

Outlines of Evolutionary Biology. By Arthur Dendy. New York: D. Appleton & Co. $3.50 net.

The majority of general works on evolution now before the public present about the same level of respectable mediocrity. Useful in a way, instructive no doubt to the uninitiated, but thoroughly uninspiring and unstimulating, these presentations of a vast subject usually have their short day and disappear in the eternal night of a top shelf or closet.

The books enumerated above do not belong to this category, but each is distinctive and worthy of special consideration. "The Story of Evolution," by J. McCabe, is no mere student's catalogue of hackneyed arguments and no light handling of laboratory material, but is a scholarly yet unpedantic and readable outline of cosmic evolution. It is written in no controversial spirit, nor to establish a new philosophy; the author narrates in simple straightforward way the truths of astronomy, geology, palæontology, and biology, and these he welds together in such a way as to give a history of the earth's formation, of its successive changes, and of the succession of animals and plants that appeared on the earth in consequence of these changes. The mere attempt to undertake such a task challenges criticism, for who can decide what organisms appeared first, or what biological miracles underlay the transformations of sea life into land and air life? Where facts are wanting, theories are many; and in choosing the hypotheses necessary to carry out his story, the author's scientific training shows itself in the selection of those which, with present knowledge, are most probable. A firm believer in adaptation he undertakes to show how "life slowly climbs from level to level" as a response to the changing scenes in the geological chronicle of the earth—to the "battle of the land and the sea"—or to alternating heat and cold. An equally firm believer in natural selection, he portrays in vivid pictures the application of this principle to persisting fauna and flora after such terrestrial catastrophes as the Permian Revolution and the Ice Age. The book, in short, is an excellent story, not a cosmic philosophy; and is written in a language which the inexpert can understand and enjoy.

"Evolution in the Past," by H. R. Knipe, while it deals with the same general subject, is formed on an entirely different model, with only enough "story" to relieve a dry catalogue of fossil forms. An admirable feature of the book is found in the excellent and spirited illustrations by Alice B. Woodward (referred to on the title-page as Alice B. Woodhouse) and Earnest Bucknall. We agree with McCabe that evolution is not a mere description of the procession of living things, but in large part an explanation of that procession. Of the latter there is little to be found in Knipe's book, although there is abundant evidence of his effort, often overstrained, to lighten the text. In both books we find the same harmless jest to the effect that certain molluscs had managed to "keep their heads," but this type of lightening is carried to an extreme in Knipe's volume, and we find it scarcely in keeping with the dignity of a great subject in science to read about the "intellectual" development of cephalopods, and experience something of a shock on noting the observation: "How far their mental development was accelerated by the habit of walking more or less on the head cannot be determined."

"Outlines of Evolutionary Biology," by Arthur Dendy, presents still another model. Here history of living or fossil types and hypotheses as to their succession give place to special problems and factors of evolution. The text includes elaborate discussions on The Evolution of Sex, by which is meant the series of stages in existing animals and plants leading to the sum of secondary characters which we speak of as sex characters; on Variation and Heredity; Theory and Evidence of Organic Evolution; Adaptation; Factors of Organic Evolution, most of which are little more than faithful efforts, clearly expressed, to give the usual textbook evidence of evolution. It is an admirable presentation, however, and differs from the mediocre works on evolution in having an introductory section on the elements of biology. Here the fundamental principles of living things are clearly outlined; Amoeba and Sphaerella are described in detail as furnishing examples of animal and plant relationships and their mutual dependence upon the sun as the source of energy. It is disappointing to find no reference to the mechanism of energy transformations whereby the radiant energy of the sun is stored up in complex protoplasmic substances, and no mention of enzymes through whose activity the stored energy is transformed into vital manifestations. As a whole, the subject is logically worked out—growth as the outcome of vital activities, reproduction as the consequence of growth; this in turn leading to the principle of the continuity of life which introduces the section on the agents by which this continuity is carried out, while the gradual complications and differentiations of these agents furnish material for the section on the evolution of sex. This in turn leads to the principles of variation and heredity, and to the questions of acquired characteristics, Mendelism, and the like, from which the transition to species, their origin and relationships, is but a logical step.

"Collected Papers in Physics and Engineering," by Prof. James Thomson, is a Cambridge book which will shortly be issued in this country by the Putnams.

In her little book, "Race Improvement or Eugenics" (Dodd, Mead), the author, La Reine Helen Baker, is concerned with the advocacy of eugenics rather than with its justification. She does, however, try to remove some misunderstandings, and particularly the apprehension of those who think they see in eugenics the foreshadow of anarchy and free-love, and dimly discern in the background the figure of Malthus. This is very neatly and cleverly done, with a pleasing fondness for alliterative and often striking phrase. The doubter or the skeptic may learn here how an ardent eugenist may take herself very seriously without marked foolishness, and those that are weak in the faith may acquire fresh courage and perchance some new weapons. The author insists that we, having given much time to the study of the unfit, should realize that it is quite time to begin to pay some attention to the fit; that eugenics is a question not of *a* population, but of *the* population, being no phase of Malthusianism. Incidentally, there is a plea for the abolition of illegitimacy and for an increased facility in the unmaking of marriages, with the suggestion that thinking women will presently demand "wages for wives, wages for motherhood, wages for housekeeping." Only when the expectation is raised that phrenology may yet prove helpful does one begin to suspect that the running gear of the eugenistic train of thought needs looking after. Concerning women and eugenics the point seems well taken that the modern feminist movement will be helpful to the state only if it shall insist that women have an all-round equality with men, but will be most detrimental and check progress "if women successfully organize as a sex-party prepared to study every question from the special interests or supposed interests of women." Brief appendices are devoted to maternity maintenance or the endowment of motherhood, based on a Fabian tract, and to the legislation favoring the sterilization of the unfit.

Dr. Cæsar A. von Ramdohr, professor emeritus and one of the founders of the New York Post-Graduate Hospital, one of the country's leading gynecologists, died at his home in New York on Sunday, aged fifty-seven. He came to this country when seventeen years of age.

Drama

To the desirable Shakespeare Library, edited by Prof. I. Gollancz and published in this country by Duffield & Co., two new volumes have been added. One of these, edited by W. H. D. Rouse, gives the Latin text of Plautus's "Menæchmi," with the Elizabethan translation of William Warner (published in 1595) on opposite pages. It is possible that Shakespeare used this translation, in manuscript, as the source of his "Comedy of Errors." The central theme of the "Menæchmi" was again employed by Shakespeare for the humorous plot of "Twelfth Night," while for the serious plot he added a theme which he had already turned to account in the "Two Gentlemen of Verona." This second theme is the subject of the other new volume in the Shakespeare Library, "Rich's Apolonius & Silla." The story here reprinted from Barnabe Riche's "Farewell to Militarie Profession" (1581) occurs in at least eleven other books or plays, in Italian, French, and Spanish, ranging in date from 1531 to 1604, and in the introduction to the present volume the editor, Morton Luce, gives some account of all of these. He believes that Shakespeare went directly to the Italian for help in constructing "Twelfth Night," and instances certain parallels in support of this theory—not convincingly, in our opinion. Again in chapter vii, dealing with Remaining Sources, he overdoes the resemblance to certain phrases in the "Arcadia" and in Bacon. Because Bacon, in the "Advancement of Learning," calls poetry "nothing else but feigned history," it does not necessarily follow that Shakespeare had the passage in mind when he wrote: "'Tis poetical . . . It is the more like to be feigned." But these are minor points. Readers of Shakespeare have here in excellent form the crude material out of which he created one of the fairest of his magical worlds.

In a "Foreword" to Mrs. Anna A. T. Craig's "The Dramatic Festival" (Putnam), it is a little amazing to find Percival Chubb giving vent to the following utterance: "We must follow the Greeks, not by using their language, but by emulating the spirit and methods of their own nurture. We have an infinitely richer storehouse to draw upon than they: what we must learn is how to make it count as they made their more limited stock count, in developing power and sensibility." The precise significance of the "limited stock" of the Greeks is not quite clear, but presumably it has reference to their paucity of legendary material as compared with our own. If this be really what Mr. Chubb means, we can only imagine that he is leaving the Homeric legend entirely out of his count, and has forgotten the fact of Hesiod's existence; he must also be overlooking the dramatic form given to the worship of Eleusis and Dionysus, and must have eliminated from his vision the entire field of Greek mythology. With all respect to Mr. Chubb and the various ethical culture societies that are endeavoring to reform our educational system by means of private theatricals, it is a little difficult to take seriously a cause which is supported by such a plea. In noticing other books of a similar character to the present one, we have already taken occasion to express our doubts as to the wisdom of this experiment in education, and there is no need to go over the ground again. Mrs. Craig's volume is a further plea for the introduction of dramatic festivals as a regular part of the school curriculum, and the author gives practical advice as to the methods of instruction to be employed, as well as examples of typical festival plays. Despite the earnestness and intelligence which Mrs. Craig devotes to her cause, we must still remain unconvinced as to its expediency.

"The High Road," which has just been produced successfully by Mrs. Fiske in the Hudson Theatre, shows that the theatrical instinct of its young author, Edward Sheldon, is still much stronger than his sense of true dramatic values. From the commercial point of view it undoubtedly is a strong piece, with a compact and entertaining story, leading through a succession of telling scenes up to an ingenious and highly effective climax, but it is so artificial in its construction and so unlifelike in its chief characterization and many of its details, that its worth as drama is inconsiderable. Nevertheless, it denotes an ability which may go far when it has been mellowed by experience. The pretence that it carries any special significance as a fresh and enlightened utterance upon the rights and capacities of woman has no substantial foundation. The two main theses of it, first, that a life of active endeavor in the cause of suffering and abused womankind is nobler than an existence of selfish ease, and, secondly, that a woman should be judged by what she is rather than by what she may have been in a long forgotten past, are indisputable and platitudinous. The weakness of the play lies, not in the moral, but in the violent and incredible illustration of it.

Mr. Sheldon, in devising his plot, was less concerned about human nature and logic than about the necessity of providing tense situations and a "fat" part for a female star, in this case, Mrs. Fiske. So he has endowed a little country girl—the drudge of a miserly and brutal father, a small country farmer—with all sorts of physical attractions and (undeveloped) intellectual power. She runs away, half innocently, with a rich, young artist, and, accompanying him on his travels, becomes in three years a brilliant and accomplished woman. After reading some socialistic books she resolves to devote the remainder of her life to righting the wrongs of her enslaved sisters. She leaves her lover (refusing marriage), gets work in a shirt-waist factory, begins to organize, and in eighteen years is at the head of a national woman's union, before which Legislatures bow and monopolists tremble. Moreover, she becomes the wife of the Governor of New York, who is running for the Presidency. Then a trust magnate and owner of many yellow journals, threatens to publish her past unless her husband will pledge himself to veto certain legislation, but she, in a capitally managed scene, checkmates him by declaring that she will give her own story to the Associated Press, and ask the public to decide between them. The curtain falls upon her complete triumph. Manifestly such a tale belongs to the order of melodramatic romance. It is full of improbabilities, the chief of which, perhaps, is the heroine's refusal of a marriage which would have enabled her to put her plans into prompt execution. A much more eloquent and versatile actress than Mrs. Fiske is needed to make her behavior or her achievement even moderately plausible.

Charles Hawtrey resumes West End management in London early in January. His first production is to be a new comedy by George Birmingham, otherwise the Rev G. Hannay, Canon of St. Patrick's Cathedral, Dublin. "General John Regan" is the provisional title. The action takes place in a small town in the west of Ireland. The personages represented range from the lord-lieutenant to the barefooted peasant Mr. Hawtrey himself describes the piece as an Irish "Bunty." His own part is that of the dispensary doctor, a genial, good-natured Irishman, who, in his endeavors to help other people, helps himself.

H. B. Irving and his company are about to start on a South African tour. He takes a number of old plays with him, and one new one, "One Hour of Life," by Desmond Coke.

The London Play Actors have just succeeded in producing Ibsen's "Brand" in something like its original shape, although some cutting was found to be unavoidable.

Alfred Calmour the actor and dramatist, died recently in London. He first attracted public notice by a pleasant little piece called "Cupid's Messenger," but he will be best remembered by "The Amber Heart," in which Ellen Terry played for years, with a charm peculiar to herself. He was a favorite of Henry Irving, for whom he did a good deal of dramatic work from time to time. In the course of his career he wrote many plays, several of which enjoyed temporary success. He acted in some of them himself, generally in the provinces.

"Bagatelle" is the name of a new comedy by Paul Hervieu, which has just been produced at the Théâtre Français, in Paris. Monsieur and Madame de Raon have been lovers for twelve years, and M. de Jincourt is M. de Raon's most trusted friend. M. de Raon becomes infatuated with a gay young widow, who gives him a midnight rendezvous in a room with a red lamp over the door. Mme. de Raon overhears this assignation, and confides her sorrow to M. de Jincourt, who straightway offers her the consolation of his own devotion. She bids him come, at midnight, to the room over whose door is the red lamp. In that fated chamber she surprises her husband and the widow. When they profess innocence, she tells them they need not make excuses, as she knows the truth, and has a lover of her own, who will soon join them. Presently M. de Jincourt enters and the two men, convicted the one of faithlessness and the other of treachery, gaze shamefacedly on each other. All the old mutual affection, trust, and esteem are at an end. The only hope is that time may heal the wounds. It is a sombre ending for a comedy, but the piece is said to be brilliantly written.

Music

Studienbuch. Von Gottfried Galston. Berlin: Bruno Cassirer.

The Thought in Music. By John B. McEwen. New York: The Macmillan Co. $1.25 net.

French Diction for Singers and Speakers. By William Harkness Arnold. Boston: Oliver Ditson Co. $1.

A few weeks ago the name of Gottfried Galston was known to few on this side of the Atlantic. With rare unanimity American critics have since expressed their opinion that he is a pianist of unusual intelligence. This verdict is borne out fully by his "Studienbuch," a treatise of 221 pages on the pianoforte works of Bach, Beethoven, Chopin, Liszt, and Brahms. To these composers Mr. Galston devoted a cycle of five piano recitals which he gave in London in 1907-8 and repeated in Paris, Amsterdam, Berlin, and Vienna. The object of his book is to fix, for the benefit of other students, professional or amateur, the thoughts that came to him while he was practicing the compositions he played in that cycle, numbering nearly a hundred different pieces, including five sonatas of Beethoven's last style, the custom (not a very good one) of playing which at one recital was originated by Hans von Bülow. For this pianist Mr. Galston has the highest respect; to him the best edited of all classical publications are the Bülow edition of Beethoven's piano pieces and the Busoni edition of Bach's "Well-Tempered Clavichord."

To elucidate points, Mr. Galston makes very free use of examples in musical type, probably one-half of the volume being taken up with them. Of the text every word is worth reading. While striving primarily to get at the inner meaning of the music, he does not hesitate to indulge in criticism, regretting, for example, that Bach arranged the invaluable contents of the "Well-Tempered Clavichord" as a series of twenty-four pieces, representing the different major and minor keys—a bit of pedantry which made him transpose some of the pieces into keys in which they are comparatively ineffective; the C sharp minor fugue, for instance, being much more impressive if played in C minor. On the use of the pedal in playing Bach there are two suggestive pages, one of the rules being: "The tip of the foot must never leave the pedal, must seem glued to it." Particularly interesting are the remarks on Busoni's translations of organ pieces for piano. The fact that few candid music-lovers will agree with Mr. Galston that, next to Bach's works, Beethoven's last five sonatas are the highest achievements in pianoforte composition need not prevent them from benefiting by his keen analyses of these sonatas. Concerning the Chopin études, he remarks that they represent an entirely new *genre* in piano music, side by side with which only Liszt's can be placed. The analyses of Liszt include some Bach transcriptions, the "Années de Pélérinage," the "Mephisto Waltz," and the "Lucrezia Borgia" fantasy; while Brahms is exemplified by his Handel and Paganini Variations, two rhapsodies, and a dozen short pieces, including eight waltzes.

John B. McEwen is fellow and professor of musical composition at the Royal Academy of Music in London. His book, "The Thought in Music," is as abstruse as a Brahms sonata. It is not easy to read, yet there are pages in it that are worth studying. It is "an inquiry into the principles of musical rhythm, phrasing, and expression." A theoretical and abstract part i is followed by a practical and concrete part in which metre, tempo, the unit of thought, shape in music, phrase-construction, and climax are considered; and this is followed by chapters on the contrapuntal idiom, the development of tonality and harmony, and the influence of harmony on musical shape. The two last-named sections are the most intelligible sections of the book. Particularly suggestive are the pages in which the author shows how "nothing is more remarkable in the whole range of modern music, from Bach to Wagner, than the fact that the composer, where he aims at the fullest and most potent expression of feeling, reverts to the consistent use of the polyphonic method." Apart from dynamics, he continues, "there is nothing in music which conveys to the mind in a more powerful way the ebullition and movement of emotion than this weaving and interweaving of melodic movement, conceived in the bounds of the larger rhythmic and tonal relationships which outline the shape." Though Professor McEwen's own style is rather dryly intellectual, he does not sympathize with purely intellectual music. His remarks (p. 205) on musical works, the interest in which is purely intellectual but which may give pleasure to the educated musician, though they fail to impress music-lovers in general, help to explain what are called differences in taste. The author himself holds that "to bear in mind the cardinal fact that music is a vehicle of emotional expression, is to realize the primal and essential nature of the art."

William Harkness Arnold holds that the study of French diction is not as difficult as that of English diction; not, at any rate, if taught by his method, which, he asserts, is at once definite, accurate, and easy. The claim may be allowed. The author has minimized the labor of learning by dividing the work between eye and ear, by stripping every topic of useless detail, and by adopting a simple system of marking to aid the memory. He calls attention to the fact that a French nasal vowel-sound is a sound spoken with the assistance of the nose, whereas the so-called nasal twang observed sometimes in English-speaking people, is produced by an exactly opposite method, that is, by obstructing the natural opening to the nasal cavities. To singers the author gives the advice that they should read aloud many times the text of each song before attempting to unite it, phrase by phrase, to the melody. The melody and the text of a number of songs by prominent French composers are printed by way of examples. As French is one of the languages which every young singer has to learn in these days of polyglot opera, Mr. Arnold's book ought to be sure of a cordial welcome.

The centenary of Ambroise Thomas was not celebrated at the Metropolitan Opera House last year, as it might and should have been, by a performance of the melodious and colorful "Mignon," for which an almost ideal cast was at hand. His far less successful "Hamlet" has now been given in that house by the Chicago-Philadelphia Opera Company, somewhat *post festum*, to be sure, but that did not matter, for there was no intention to honor Thomas. His opera was revived solely for the purpose of giving Italy's most popular and high-priced baritone, Titta Ruffo, a chance to astonish and delight a certain class of opera-goers with an exhibition of his particular style of singing, especially in the drinking song, which closes the second act of that foolish opera. The house was packed as it seldom has been, and frantic demonstrations were witnessed. They were secured by a method which is still much in favor among Italians, and especially South Americans, but which elsewhere is fortunately less in vogue than it was a generation ago—the method of "featuring" loud high notes for their own sake. There are half a dozen tones in this baritone's voice which have a clarion tenor quality, and with these tones he brings down the house. In quality his voice is inferior to that of two other Italian baritones, Sammarco and Amato, and he has little variety of tonal coloring or emotional expression. As an actor he is commonplace—at least he was so in "Hamlet." Injudicious admirers have called him "the singing Salvini," thus arousing expectations which he falls far short of fulfilling.

Mozart's "Magic Flute" has been sung at the Metropolitan Opera House with casts which it takes one's breath away to look at now. It included, on March 30, 1900, Sembrich, Ternina, Mantelli, Bridewell, Zelie de Lussan, Suzanne Adams, Broadfoot, Olitzka, Emma Eames, Dippel, Campanari, and Plançon, whose place, on January 27, 1902, was taken by Edouard de Reszke, the rest of the list being little changed from the earlier one. At the revival of the "Magic Flute" in the Metropolitan last Saturday, the cast included Ethel Parks, Emmy Destinn, Vera Curtis, Louise Homer, Marie Mattfeld, Leo Slezak, Putnam Griswold, Otto Goritz, Bella Alten, and Albert Reiss. There are big names in this list, too, and too much cannot be said in praise of the Pamina of Destinn, the Tamino of Slezak, and the Papageno of Goritz, who is a most amusing actor, as well as a great singer, and who succeeded in making the whole opera revolve around him. Ethel Parks, as Astrafiammente, disclosed a facility in the emission of staccato rockets, but was otherwise not equal to the part, which even the greatest singers dread; and Edward Lankow's singing of Sarastro had little to commend it except the real basso profundo quality of his voice. Mr. Hertz, who was evidently as glad as the singers to have a change in the German repertory, conducted with real appreciation of Mozart's style. The scenery was virtually a duplicate of that which created such a sensation in Berlin two years ago; it was painted by Hans Kautsky, and consists of fourteen changes, which were made most adroitly.

MacDowell's "Keltic Sonata" was played by Teresa Carreño in London the other day on the occasion of the jubilee of her first public appearance. She succeeded, according to the *Times*, in "giving to it a certain dignity, one might almost say majesty, by her strong phrasing." The eminent Venezuelan pianist is approaching her fifty-ninth birthday, yet, we read in the same journal, "she is still at the very height of her powers. Her extreme sensitiveness to the value of rhythm in every phase of interpretation is the quality which shows this most remarkably."

A denial of the death of Mme. Minnie Hauk, the American grand opera singer, has been made by her husband, Baron von Hesse-Wartegg. We regret that, following a common report, we announced in our issue of last week that Mme. Hauk had died recently in Munich.

Art

A NEW GALLERY FOR LONDON AND POST-IMPRESSIONISM.

London, November 15.

The opening of the new Grosvenor Gallery last month is an event of more note than the exhibition held to inaugurate it. London is probably worse off for picture galleries than any other large town in Europe, even in England. The Royal Academy is a close corporation; the British Artists' and the Old Water-Color Society's rooms are comparatively small and rather far from the beaten picture-show track; those of the Institute in Piccadilly are only a little larger; the New Gallery, the best of them all, was a few years ago converted into a Vienna café, and now has disappeared altogether, to make way for one of those "Picture Palaces," or "Cinemas," that provide the sort of art the British public loves best, and that are scattered over London almost as plentifully as the Lyons' and A. B. C. tea-shops. There remains the Grafton, an unusually difficult gallery to hang and not particularly well lighted. The new Grosvenor ought, therefore, to be a welcome addition—but just how welcome remains to be seen.

Its position is good, in New Bond Street. It is understood to have strong backing, as the company running it is said to consist mainly of two leading firms of London picture dealers. It is large enough to be used for some of the most important shows held during the year, and already it has announced that the annual exhibitions of the Arts and Crafts, the International, and the National Portrait Painters' Societies will be held in it. There are five rooms, two of them of fairly good size, and a long narrow entrance hall for water-colors and black-and-white. Unfortunately, it is without the sculpture hall that was such a feature at the New Gallery. The light is excellent, that is when there is any light to be had in London. The whole place has been freshly and elaborately decorated, perhaps too elaborately, for the walls are covered with old-rose brocade, hanging curtain-wise in loose folds, and the perpendicular lines thus made and the vivid color overpower only too many of the paintings.

Sir Coutts Lindsay, the founder of the original and now historic Grosvenor Gallery, has just written to the *Times* objecting that this revival of the name which must ever be associated with his may mislead the public. But of this there is little danger. Indeed, just now the use of its name only helps to point the difference between the conditions in Sir Coutts Lindsay's day and in ours, as well as between the ends then regarded as revolutionary, for which he established his Grosvenor, and the more conservative aims of the new company in establishing theirs. When the Grosvenor was started in the seventies, the Royal Academy was at the height of popularity and power. It gave the hallmark of success. The public that crowded to its shows recognized no painter not included in its ranks. Outsiders might, and usually did, have their private patrons, and often were prosperous. But publicly they had no chance, and it was to make this chance for them that Sir Coutts opened his sumptuous gallery. Its history has been told. Everybody knows that, if Rossetti never showed there, eagerly as his presence was desired, Burne-Jones, Holman Hunt, Whistler, Walter Crane, and many others against whom the Academic door was closed, did, giving its exhibition a character and an interest that few exhibitions in England had ever had before, that few have ever had since. It was different from every other exhibition of the day, so different that it could not be ignored. It excited the critics, it bewildered the public, it became the talk of the town until it got into *Punch*, which the Briton has always taken as seriously as his Bible, and into the Gilbert and Sullivan opera, then the other most popular thing in London, and the "Greenery-Yallery, Grosvenor-Gallery" young man flashed into fame.

The sole drawback was that Sir Coutts Lindsay had not the courage of his own ideas. If his gallery was not to be the rival of the Academy, it had no particular reason for existence, and yet he seemed afraid to keep the Academician out. That was his mistake. The Grosvenor Gallery gradually lost its special character, just as the International has in our time by dropping its international element and degenerating by degrees into an annex of the Academy. The Grosvenor was doomed. An effort was made to kindle new life into it by showing the work of the Glasgow School when the Glasgow School began to be talked about in London. But it was no use. The Glasgow men were not sufficiently strong to work the miracle.

Now to turn to the new Grosvenor is to find that there is at present no distinguished group of outsiders waiting for the public recognition that should by rights be theirs. The Academy has no longer its old power; it has been compelled to broaden the old narrow Academic standard; to show on its walls has ceased to mean the one high-road to fortune. Besides, societies like the New English Art Club and the International are supposed to represent the more independent groups, though their members are falling, if they have not fallen, into a rut scarcely less conventional, scarcely less hackneyed, than the Academician's. The Grosvenor offers a shelter to societies with no home of their own, but it cannot collect the pariahs, the outcasts of official British art, as Sir Coutts Lindsay did, for the good reason that there are no longer any to be collected.

To look into the catalogue of the Inaugural Exhibition, is to find the names chiefly of members of the New English and the International; to look on the walls is to find much work that has been already shown in the exhibitions of these societies, or even in the Academy. Many of the artists to whom prominence is given—Lavery, Orpen, Derwent Wood, Strang, C. H. Shannon, have been made Associates of the Academy, and there is not so very much to choose between their work nowadays and that of the Academicians against whom the old Grosvenor was a protest: it has no greater freshness, it is as vowed to formula. Really, I saw nothing notable that I had not seen before except a vigorous sketch of a Picador, a memorandum of movement, by J. Crawhall, who produces little, but in that little retains his vigor and directness; a pleasant landscape here and there; a group of those lithographs of the Panama Canal by Joseph Pennell, of which the entire series has recently been bought by the British Government for the South Kensington Museum. One bid for sensation is the addition, since the gallery opened, of the studies by Albert Rothenstein of the costumes for Granville Barker's production of "The Winter's Tale": costumes that are only a trifle less awkward and affected on paper than on the stage. Another is the reappearance of Walter Greaves in a room full of Nocturnes—paintings of Whistler's subjects with Whistler's titles. But it has not made a sensation; in fact, it seems more likely to put an end to the Greaves sensation of eighteen months ago.

So far, in a word, the chief success of the new Grosvenor, whatever it may have in store for us, has been to revive interest in the old. It may not be altogether to blame for this since new movements are not the order of the day. The only pretence—and that but a poor one—to a movement is Post-Impressionism which the Grosvenor has allowed the Grafton Gallery to capture, perhaps because its chief leaders are foreigners, and the few Englishmen who have identified themselves with it are so obviously followers at a distance; perhaps because, though the show at the Grafton is the most successful now open, the edge of the sensation made by Post-Impressionism has been somewhat worn off. The Post-Impressionists' first show at the Grafton, of which I wrote a year or so ago, appealed to the great public by its novelty and had the virtue of including work by Cézanne, who, if not the supreme master and Post-Impressionist he is claimed to be, was at times an interesting painter; by Van Gogh, who, when not insane, was an artist of great distinction; by Gauguin, in whose work beauty was not systematically disdained. But in this second show there are only four or five canvases by Cézanne and nothing by Van Gogh and Gauguin, except a salesroom full of photographs of the works of all three, for Post-Impressionism from the first has been largely a commercial enterprise. Matisse and Picasso are the two artists who dominate the collection.

In the introduction to the catalogue Roger Fry kindly prepares us for what we ought to find in the work of each: continuity and flow of rhythmic lines, reality of form, logic of space relation, a new use of color in Matisse; in Picasso, an abstract language of form, a visual music—whatever this cryptic pronouncement may mean. Unaided, I should not have suspected these qualities in the large designs by Matisse—an interior, apparently of a studio; an arrangement of nudes for the decoration of a palace in Moscow; a "Conversation" between two figures in which, as in all his figures I have seen, if in varying degrees, reality of form is emphasized, or distorted, into caricature, while in the large as well as his smaller paintings, space, color, and line are used as the designer of posters might use them. Indeed, many of them, one is inclined to suspect, were intended for posters, but designs that are appropriate when advertising the manufacturer's wares on the hoardings and in railway stations, if often delightful and accomplished for their special purpose and place, are not adapted to the decoration of a palace or to be framed and hung as pictures. Picasso expresses form in cubes and squares of paint and in dingy color, his language so abstract that the head of a man of which he seeks to give his impression disappears entirely, and to discover it, even as the motive for his design, becomes as difficult as an algebraic problem or a Chinese puzzle, and the music that he would make visual fades away in the hopeless search for a clue. These are the two men who set the standard at the Grafton. True, there are a few like Bonnard, Flandrin, Doucet, who have the independence to work out their artistic salvation after their own fashion; true, the Russian group have travelled very little further than the English Pre-Raphaelites in their day, with the difference that the Russians for their models have gone back to their own Byzantine primitives. But, on the whole, it is the influence of Matisse and Picasso that is most in evidence. With all the sympathy in the world, with every desire to grasp and accept the point of view of these two men whom the younger generation is looking up to as leaders, I have endeavored in vain to understand what they are driving at. Now, with the old masters, with Rembrandt, Titian, Velasquez, it is possible to see what they are trying to do in their work, if impossible to see how they do it; with the Post-Impressionists, it is just the other way round, and it is as difficult to see what they are trying to do, as it is easy to see how they do it.

This, I think, explains their weakness. If they have sacrificed beauty, as it was once conceived, of form, color, and line, if they are indifferent to the dignity, the quality, the exquisiteness of surface hitherto prized by the masters, it is because they are supposed each to be striving to express something intimate, something individual—their "spiritual experiences"—by means as essentially personal. And yet, you need go no further than the Grafton Gallery to find any number of men and women of many nationalities, expressing just the same thing in the same way—apparently passing through the same rare "spiritual experiences," and evolving the same individual method of recording them. Roger Fry himself, their exponent, after coquetting unsuccessfully with older masters, now appears a full-fledged Post-Impressionist, and such numbers of other Englishmen have caught the trick that the Grafton is not large enough to hold them, and they have overflowed into the Grosvenor and into a show of their own now open at the smaller Stafford Gallery. Nobody has ever managed to become a second Rembrandt, or Titian, or Velasquez, but everybody who chooses appears to be able to turn into a Post-Impressionist while you wait. N. N.

"Fifty Salem Doorways," by Frank Cousins, is announced for immediate publication by Doubleday, Page & Co.

At a recent meeting of the Manchester Egyptian and Oriental Association, Prof. Elliot Smith read an account by Mr. J. E. Quibell of two winters' excavations in a small patch in the cemetery of Memphis. More than four hundred tombs were dug, uniform in type, and covering but a small period of time, mostly of the second and third dynasties. The excavations showed that the burial chambers were in the form of a house, complete in every respect, even to the bathroom, indicating that the provision which it was thought necessary to make for the dead was more thoughtful and complete in this early age than in the later epochs. In all these underground chambers the antiquities found were somewhat disappointing. This was due to the fact that the tombs had been opened by ancient robbers. However, a great number of bowls and dishes were obtained, also ewers and copper basins, and fragments from a wooden draughts-board. The seals on the vases were in three tombs inscribed with kings' names, thereby giving assured dates for the cemetery. The walls of the underground passages in these tombs were covered with paintings.

Mr. Aylward M. Blackman gave an interesting lecture at Bolton, England, on his recent discoveries at Meir, in Upper Egypt. This site is on the west bank of the Nile, thirty miles north of Asyut, and about two hundred miles south of Cairo. The desert behind Meir was the necropolis of Cusæ. Here the people of Cusæ were buried from the earliest times to the Græco-Roman period, and the hillsides are literally honeycombed with the rock-cut tombs of the wealthy, while the sandy plain below is full of the graves of the poorer people. Six decorated tombs were found; the earliest belonged to the sixth dynasty, and the remaining five were of the period of the Middle Kingdom, and formed a group by themselves, representing five successive generations of princes. Mr. Blackman succeeded in making complete records of two of the tomb-chapels, the earliest and the latest of the Middle Kingdom group.

During some excavations undertaken at Mount Cavo, in the Roman Campagna, the diggers struck upon an extensive cemetery belonging to the second century A. D. A gladiator, clad in iron armor, was discovered in one of the tombs, which was covered with big tiles taken from the Temple of Tiberius. There were also found a number of bronze coins bearing the head of the Empress Faustina, a quantity of rings and safety pins, the head of an elephant in terracotta, and a fragmentary vase with inscription.

Finance

WHAT NEXT?

Two incidents of the past week, more or less connected, threw some additional light on the remarkable state of affairs in American finance and industry. One was the resumption of the gold import movement from London to New York; nearly $2,000,000 has been taken within a week. Europe had expressed the hope that in the present tension of its own money markets, and with the Balkan affair still on the calendar unsettled, our drafts on its gold supply might be postponed. Our own international bankers joined in deprecating a movement of the sort, and it could not be argued that our own money market was in a state which urgently required them.

Rates for Wall Street demand and time loans stood at 6 per cent., when the gold imports began; the demand rate went to 12 per cent. this week. That was probably a more or less temporary "squeeze," however; it caused no general inconvenience, and the surplus reserve of the New York banks, which was $6,700,000 last Saturday, although relatively low, nevertheless represented a continuous gain in strength since the beginning of November. New York could undoubtedly have got along without any more gold from Europe; it was, indeed, quite as much concerned with helping to avert a "money squeeze" at London as with putting down Wall Street rates.

But the automatic movement of foreign exchange in this country's favor forced the hand of the international market. We were importing gold from London in September, with sight sterling rates at 4.85—the lowest since 1910. The war, the "bourse panics" in Europe, and the heavy sale of American stocks to us by London forced up the rate, by October 24, to 4.86⅛, or near the par of exchange. But from that figure, the rate began quickly to slide down again, touching on Tuesday of this week 4.84½. This was absolutely the lowest sterling rate since the last month of 1907, when the markets had not yet fully emerged from the panic. With exchange on London considerably higher, we imported $13,000,000 gold from England in 1910 and $6,000,000 last September; it was inevitable, therefore, that last week's low rate should compel resumption of the movement.

This recent sharp movement of foreign exchange in favor of the New York market was largely due to London's repurchase of a part of the stocks which she sold to us last month. But the larger view of the market recognizes the existence of an international situation heavily in our market's favor. That position was modified when Europe sold back our stocks, but was intensified when that offset ceased to operate. The more potent influences were disclosed by last week's report by the Government on our October foreign trade.

It shows that the United States sold last month to Europe $11,500,000 more in wheat than in October, 1911; $16,000,000 more in cotton, $13,000,000 more in non-agricultural products; $44,000,000 in all our merchandise exports combined. The exports of wheat were the largest for the month since 1898; of cotton, the largest of any October except for 1910 and 1909, when prices were utterly abnormal. Exports of non-agricultural products and the total October exports have never been equalled in that month.

This remarkable showing bears alike on our international position and on our home prosperity. Taken with last month's extraordinary achievements in the financial, industrial, and agricultural fields—its high records in bank exchanges, iron and steel production and consumption, railway earnings, and harvest yields—it again raises the question, what the country has before it. The inquiry is none the less interesting, when the Stock Exchange is merely standing still and acting as if it had no notion at all of what is coming next.

It is not easy to escape the conclusion that we are in for a period of genuine and great prosperity. If the tangible evidences of the September and October trade reports are to be allowed any such weight as the similar indications have been found to deserve in other years, the revival ought also to be reasonably prolonged.

It is not altogether unusual that the stock market should give no emphatic prophecy of the sort. The Stock Exchange in the long run has correctly predicted and reflected our epochs of trade prosperity, but it has often done so in a peculiarly fluctuating way. The resemblance of the present season to the autumn of 1897, when the great crop had been harvested, the record-breaking export movement had begun, and the spectacular trade revival was under way, has often been pointed out. But stocks at New York broke 5 to 10 points in September of that year, were weak again in October, and broke sharply in November.

The reasons then assigned, no doubt correctly, were high money in September (ascribed to reviving trade, but disliked in itself by Wall Street), yellow fever at New Orleans in October, and fear of complications with Spain and Cuba in November. That was what Wall Street talked about in its financial discussions of the autumn of 1897, rather than about prosperity; and the retarding influences on the Stock Exchange, in the midst of the returning general prosperity, were of much the same sort as 12 per cent. call money, a Balkan war, and talk of tariff revision have been in the same months of 1912.

Most people who look back in their personal reminiscence to the successive chapters in the financial history of 1897 and the succeeding years would find it a little difficult, to-day, to recall the "money squeeze," the "yellow-fever camps," and ex-Minister Hannis Taylor's letter on Cuban independence. Perhaps they would not even remember the break in stocks in the autumn of 1897. The business community at large paid little attention to it, even then.

Schiller: Kabale und Liebe

Edited by WM. ADDISON HERVEY, Associate Professor of Germanic Languages and Literature in Columbia University, cvii+279 pp. 16mo. $1.25.

Professor Hervey's elaborate and scholarly edition of Schiller's *bürgerliches Trauerspiel,* while primarily prepared for the use of college classes, will be welcomed by all students of Schiller and of the German drama. The full introduction discusses the play in regard to its genesis, its plot and structure and its characters, with an interesting consideration of its Literary Forerunners in German, French and English. An unusual and effective feature of the explanatory notes is the provision of stimulating comments on the several groups of scenes. The attractiveness of the edition is heightened by several reproductions of engravings of scenes in the play.

Henry Holt & Co., 34 W. 33 St. New York

Just Published

The Ability to Converse

By STANLEY M. BLIGH. *Author of "The Direction of Desire" and "The Desire for Qualities."*

3¾x6: xv+323 pp. Cloth, **70c**; Venetian morocco, gilt top, **$1.00.**

The author's object has been to estimate and explain the mental qualifications, either natural or acquired, which are necessary for good conversation, rather than to give an account of how people do in fact talk to each other, or to lay down rules about the best manner of conducting discussion.

STUDIES IN THE PSYCHOLOGY OF INTEMPERANCE

By G. E. PARTRIDGE, Ph.D.
Author of "The Nervous Life," etc.

A book for physicians, sociologists, and all interested in the care or cure of those addicted to drink, and in intemperance as a social problem.

Basing his conclusions mainly on a study of the mental state—the whole psychology—of the hard drinker, the author seeks help and cure for the intemperate along the social, educational, and psychological lines here laid down. A book rich in practical suggestions that draws on the latest scientific knowledge, and on original investigation.

(12*mo.* $1.00 *net; postpaid* $1.10.)

Only Authorized Edition

AN INTRODUCTION TO METAPHYSICS

By HENRI BERGSON

Authorized translation by T. E. HULME, prepared under the supervision of M. BERGSON, containing additions made by him. 75 cents net. By mail, 85 cents.

This volume forms the best introduction to M. Bergson's philosophy. A reading of it is indispensable to a proper understanding of Bergson's position. German, Italian, Hungarian, Swedish, and Russian translations of it have already appeared.

G. P. PUTNAM'S SONS
NEW YORK LONDON

"I have read your last book with solid satisfaction and it shall be one of my pleasures to make as many people read it as I can reach. It is full ripeness and mellowness—worth tons of ordinary socialist prattle on that subject," writes John Graham Brooks to Charles F. Dole, author of "The Burden of Poverty." *Postpaid* 55 *cents.* B. W. HUEBSCH, 225 Fifth ave., New York.

Pride of War

Translated from the Swedish of Gustaf Janson

Sets its author at once among the greatest writers of Europe. —*Athenaeum* (London).

It may be doubted whether the physical actualities of modern warfare have ever been so hauntingly portrayed by any author before.—*London Daily News.*

The peace propagandists will miss the most telling argument that has been made in their favor in a long time if they do not give to "Pride of War" a wide circulation.

—*New York Times.*

JUST PUBLISHED

CHIVALRY IN ENGLISH LITERATURE

By WILLIAM HENRY SCHOFIELD

Professor of Comparative Literature in Harvard University.

12mo. Cloth. 300 pages. $2.25

Four lectures on Chaucer, Malory, Spenser, and Shakespeare, delivered in French at the Sorbonne and in English at the University of Copenhagen, now revised and enlarged for publication.

"My object in these lectures," the author explains, "is to show how the ideal of French chivalry entered into English literature and thereby affected the attitude of the English-speaking world. . . . I shall endeavor in sum, to indicate the genesis of the idea conveyed by the English word 'gentleman,' with all that it suggests."

NEW BOOKS

THE UNIVERSITY OF CHICAGO PRESS

The Courts, The Constitution, and Parties

Studies in Constitutional History and Politics. By ANDREW C. MCLAUGHLIN, Professor of History in the University of Chicago.

The work consists of five papers, the first of which discusses the power of a court to declare a law unconstitutional. Two deal with the growth and essential character of political parties, and are followed by one on the history of differing theories of the Federal Union. The work fittingly concludes with a discussion of the written constitution in some of its historical aspects. 308 *pages*, 12*mo*, *cloth*, *postpaid*, $1.63.

American Poems

Selected and edited with illustrative and explanatory notes and bibliographies. By WALTER C. BRONSON, Professor of English Literature, Brown University.

The book offers a most carefully chosen and well balanced presentation of the poetic works of Americans, covering the entire period of our history. For the teacher as well as the student the value of the work is greatly enhanced by the comprehensive Notes, Bibliography, Glossary, and Index. It is believed that the book will have the wide popularity of Mr. Bronson's earlier collection, English Poems, which has been adopted by all leading American colleges. 680 *pages*, 12*mo*, *cloth*, *postpaid*, $1.68.

The Minister and the Boy

By ALLAN HOBEN, Associate Professor of Homiletics in the Divinity School of the University of Chicago.

From the first chapter on "The Call of Boyhood," through one on "The Approach to Boyhood," the author leads us by suggestion and informing principles to realize the enormous opportunity afforded by the raw material, "boy," on which the minister may work. Later chapters on play and vocational choice show how to train the boy for citizenship, how responsive he is to the right sort of impetus, and how his religious life may indirectly, and even unconsciously, be stimulated by the proper appeal to his manly instincts, while furnishing him with a normal outlet for his natural enthusiasm.
Illustrated, 180 *pages*, 12*mo*, *cloth*, *postpaid*, $1.10.

"Undoubtedly the Book of the Season."—CHICAGO DIAL

The Letters of George Meredith

Edited by HIS SON 2 Volumes. $4.00 net; by mail $4.28

The London Spectator: "The range of these six hundred and thirty pages of Meredith's correspondence is so enormous that it is difficult to make up one's mind at what point to approach it. The volume of Meredith's personality was immense, and here we see it in full flood through sixty strenuous years. Every line is animated by his wonderful relish and curiosity for life. On every page there waves his banner, and beneath it rumbles and flashes all the artillery of his passionate and brilliant eloquence."

Phila. Public Ledger: "They open a window into the mind of the man."

Boston Transcript: "Two volumes that disclose the workings of the mind of a genius."

The Poetical Works of George Meredith

With Some Notes by G. M. TREVELYAN

George Meredith was one of the great poets in the succession of English poetic masters. It is therefore right that all of his poetry should be made available in one volume by which his eminence can be appreciated and judged.

In one volume. With portrait. $2.00 *net; by mail* $2.19

The Mortal Gods, and Other Dramas

A Volume of Poetic Dramas

By OLIVE TILFORD DARGAN

Her "Lords and Lovers" and "Semiramis" gave her not only a position in the front rank of American poets, but a position peculiarly her own.

"The Mortal Gods" itself deals with current social philosophy in an imaginary country, and might almost have been written with reference to our own political situation. "A Son of Hermes" is a drama of the time of Alcibiades; "The Sword of Love" turns on a Crusade of the Twelfth Century.

$1.50 *net; by mail* $1.65

New Trails in Mexico

By CARL LUMHOLTZ, M.A.

Author of "Among Cannibals," "Unknown Mexico," etc.

Dr. Lumholtz has a very deep love of nature, and his own beautiful descriptions are enhanced by two color plates and many illustrations. But he also has a thorough and large practical knowledge, and his exposition of the conditions of soil, the opportunities for agriculture and mining, is enhanced by two splendid maps made by himself.

Part of the country which Dr. Lumholtz journeyed through had never seen a white man. *With numerous illustrations, including 2 color plates and 2 maps. Large 8vo.*

Price $5.00 *net; by mail* $5.30

By JOHN GALSWORTHY

The Eldest Son

A Domestic Drama in Three Acts

This drama, with an English country house for its setting, has all the concentrated power of "Strife" and "Justice." Constructively it is perfect: without a pause in the action, the situation—depending on the entanglement of "the eldest son"—is exposed, and the characters, drawn from the upper and lower classes, are introduced.

60 *cents net; postpaid* 77 *cents*

The Inn of Tranquillity

On Life and On Letters

In the papers on Life Mr. Galsworthy reproduces incidents, mainly of London street or English village, of intense individual interest; but more—and this is probably the purpose—he gives the feeling of the great natural forces of social evolution at work under the surface. Each story carries distinct social significance. The papers on Letters give the writer's artistic creed.

$1.30 *net; by mail* $1.44

Anson Burlingame and the First Chinese Mission to Foreign Powers

By FREDERICK WELLS WILLIAMS

Assistant Professor of Oriental History in Yale

"The story of this diplomatic career is not only one of the most creditable chapters in the history of America, but was, in fact, one of those splendid adventures of the spirit which it is the peculiar and lasting distinction of men of prophetic mind to make in the world of affairs."—*Outlook.*

With frontispiece. $2.00 *net; by mail* $2.19

Causes and Effects in American History

The Story of the Origin and Development of the Nation

By EDWIN W. MORSE

"Mr. Morse has written an informal history of the soul of America as revealed in the larger and more significant events in its history. It is a colossal fairy tale, and every man, woman, and child in the country ought to know it."—*The Outlook.* "His compact little volume is marked by singular fairness on the one hand and sound judgment on the other, and by what we venture to define as very unusual common sense. There is not in it a line of preaching or of posing. And it is written in a style of great simplicity, clarity, and animated sobriety."—*New York Times.*

With illustrations, facsimiles, maps. *$1.25 net; postpaid $1.34*

Essentials in Journalism

By HARRY FRANKLIN HARRINGTON, Director of Courses in Journalism, Ohio State University, and THEODORE T. FRANKENBERG, *Ohio State Journal.*

JUST PUBLISHED. **$1.75.**

A textbook for all young people preparing for practical newspaper work. The book aims to combine the practice and the philosophy of all routine news paper work and takes up in turn each phase of editorial activity, from the simple work accorded a beginner to the forms given only to tried men. The student is shown the thing to do and the why of it. The standards set are those of the average newspaper office. The illustrations are many and form an essential part of the text.

THE ARTHUR H. CLARK CO., CLEVELAND

A LIST OF UNUSUAL BOOKS

The Life of the Bee *Illustrated Edition* By MAURICE MAETERLINCK

Translated by ALFRED SUTRO. *With mounted full-page illustrations in color. by* EDWARD J. DETMOLD.

One of the most beautiful books, both in contents and appearance, of the season. It is truly a zoölogy of the honey-bee, and a very exact and careful one, but it is a great deal more—it is a philosophy, a poem, and a book to be read for its literary grace, wholly apart from one's interest in the special subject pursued.

Elaborate holiday cover. Large 8vo. Boxed. $4.00 *net. Postage* 27 *cents extra.*

Rhymes of a Rolling Stone By ROBERT W. SERVICE

Tense, stirring, virile songs of the Sub-Arctic by the author of "The Spell of the Yukon," a volume of poetry that has reached a sale of 150,000 copies.

Small 12mo. $1.00 *net. Postage* 10 *cents extra.*

Modern Philanthropy: A Study of Efficient Appealing and Giving

With a foreword by Mrs. E. H. HARRIMAN. By WILLIAM H. ALLEN

How Mrs. E. H. Harriman was asked to give $270,000,000, and what she did. An epoch-making book on American charities.

12*mo.* $1.50 *net. Postage* 13 *cents extra.*

The Arabian Nights *With full-page illustrations in color and in black and white* By RENÉ BULL

The well-known ability of this artist, and his extensive and first-hand knowledge of the Orient, have resulted in a series of wonderful illustrations for some of the most picturesque of the Arabian Nights Tales.

Large 8vo. Boxed. $3.50 *net. Postage* 31 *cents extra.*

This and That, and The Other By HILAIRE BELLOC

A volume of graceful, satirical essays, somewhat in the manner of Chesterton's, by this eminently distinguished and extremely clever French-Englishman.

12*mo.* $1.25 *net. Postage* 12 *cents extra.*

Intimacies of Court and Society By THE WIDOW OF AN AMERICAN DIPLOMAT

An Unconventional Narrative of Unofficial Days by the Widow of an American Diplomat

"This is one of the most entertaining books of its class yet published in this country."—*N. Y. Tribune.*

"Not for many moons has there appeared a book of court and society gossip that could match this one in excellence of matter, style, and spirit."—*Chicago Record-Herald.* *Illustrated.* 8*vo.* $2.50 *net. Postage* 17 *cents extra.*

Michael Heilprin and His Sons A Biography By GUSTAV POLLAK

This is an important biography of three remarkable men. Michael Heilprin, the father, who died in 1888, was one of the foremost scholars and critics of his day. Professor Angelo Heilprin, the younger son, was a scientist and explorer of great renown; and Louis Heilprin, who died but two months ago, was beyond doubt the greatest encyclopædic expert this country has produced.

Illustrated. 8*vo.* $3.50 *net. Postage* 23 *cents extra.*

Dancing and Dancers of Today By CAROLINE and CHARLES H. CAFFIN

The modern revival of dancing as an art, with particular emphasis on notable modern dancers, and a discussion of the history and development of the various forms of dancing they represent.

With many illustrations from photographs of famous dancers. $4.00 *net. Postage* 31 *cents extra.*

Reminiscences of a Diplomatist's Wife By Mrs. HUGH FRASER

A Continuation of "A Diplomatist's Wife in Many Lands

Another book from that same accomplished sister of Marion Crawford who has already given the literary and artistic world two delightful volumes of sensible and witty gossip.

"If every one enjoys Mrs. Hugh Fraser's 'A Diplomatist's Wife in Many Lands' as much as I have," said the noted critic, Miss Jeannette L. Gilder, "the book will be one of the most popular of the season." Enough readers have enjoyed it to make it one of the most popular books of its kind for two seasons.

Illustrated. $3.00 *net. Postage* 20 *cents extra.*

NOVELS FOR THE DISCRIMINATING

The Golden Rose

By MRS. HUGH FRASER and J. I. STAHLMANN

"One of the noblest novels that has appeared in English in twenty years. . . . Far above and beyond the noble theme and the perfect technique is the spirit in which the novel has been written. *It is the most beautiful meditation on human life that I can recall in the entire range of English fiction.*"—Rev. JOHN TALBOT SMITH in *The Ave Maria.*

$1.35 *net. Postage* 13 *cts. extra.*

One of the Multitude

By GEORGE ACORN

With an introduction by ARTHUR C. BENSON.

"Just such a heart-stirring and thought-evoking chronicle as that with which Mr. George Meek, under the sponsorship of Mr. H. G. Wells, arrested the attention of the English-reading world two years ago."—*The Dial.*

$1.25 *net. Postage* 11 *cts. extra.*

The Vanishing Man

By R. AUSTIN FREEMAN

A detective story of which a hardened reader of detective stories for sixty years states: "Of course Conan Doyle has some wonderful yarns, but is there anything that can compare with this?"

$1.25 *net. Postage* 13 *cts. extra.*

The Squire's Daughter

By ARCHIBALD MARSHALL

Author of "Exton Manor," etc.

English country life, and the characteristics, foibles, peculiarities, and personalities of what are called "County people," written by an English novelist who follows very successfully in the steps of Anthony Trollope.

$1.25 *net. Postage* 15 *cts. extra.*

Publishers DODD, MEAD & COMPANY New York

APPLETON'S HOLIDAY PUBLICATIONS

Dainty Gift Books

Blue Bird Weather

By Robert W. Chambers.

"Blue bird" weather spoils a young sportsman's duck shooting expedition, but provides him with ample time to fall in love with a beautiful country girl. Pictures by Gibson.

$1.00 net. Postpaid $1.09.

The Going of the White Swan

By Gilbert Parker.

An inspiring little story of the Canadian woods, telling of a priest's sacrifice to re-unite a family.

75c. net. Postpaid 82c.

Mrs. Budlong's Christmas Presents

By Rupert Hughes.

Here is a story entirely different from the conventional, often mawkishly sentimental, Christmas story. This is screamingly funny, and is based on the mania for Christmas presents.

50c. net. Postpaid 55c.

Where the Heart Is

By Will Irwin.

Showing how three old people, apparently without friends, spent a most delightful Christmas.

50c. net. Postpaid 55c.

Under the Old Flag

By General James Harrison Wilson.

General Wilson's recollections are not only intensely interesting, but also decidedly spirited. His work is based on his services in the Civil War, the Spanish-American War, and the Boxer Rebellion. His intimacy with Lincoln, Grant, Sheridan, and other famous men, makes this work as precious as a human document as it is valuable as a record of historical events by an eye-witness.

Two volumes. Cloth, $6.00 net per set. Postpaid $6.30.

Social Life in Old New Orleans

Reminiscences of Mrs. Eliza Ripley.

Mrs. Ripley takes the reader for a ramble through the streets of New Orleans as they were seventy years ago. Mrs. Ripley was prominent in New Orleans society long before the Civil War, and her reminiscences are most entertaining and historically valuable.

Illustrated. Cloth, $2.50 net. Postpaid $2.70.

Romance of a Favorite

By Frederick Loliée.

M. Loliée, probably the greatest living writer of the period, pictures the life of the Countess de Castiglione, favorite of Napoleon III and a chief figure at the Court of the Second French Empire.

Illustrated. Cloth $3.50 net. Postpaid $3.70.

Hail and Farewell---Salve

By George Moore.

Showing the brilliant George Moore deeply imbued with the spirit of Ireland, and recording rare discussions upon every possible subject—art, music, literature, politics, the stage, religion.

Price, $1.75 net. Postpaid $1.89.

Hail and Farewell---Ave

George Moore's impressions of Ireland and his reminiscences of his friends and acquaintances.

$1.75 net. Postpaid $1.89.

Mrs. Edith Wharton's New Novel

THE REEF

"It is the personal note in 'The Reef' which counts. The story is one of great distinction, far greater than anything Rod, Doumic, or even Bourget ever wrote. After 'The Reef' no one should question Mrs. Wharton's place among the deepest psychologists and most original stylists of the day."—*Pittsburgh Post.*

$1.30 net. Postpaid $1.42.

D. APPLETON & COMPANY, New York

APPLETON'S HOLIDAY PUBLICATIONS

Democracy and the Church

By Samuel George Smith.

Written in the interest of no creed, and to promote no theory of church order, this book furnishes a powerful argument both for the truth and the vitality of essential Christianity, as against critics without and pessimists within the church.

Cloth, $1.50 net. Postpaid $1.62.

Founders of Modern Psychology

By G. Stanley Hall.

An amplification of six lectures given in 1912 at Columbia University. The author discusses the personality, career and achievements of Edward D. Zeller, Edward von Hartmann, Herman Lotze, Theodore Fechner, Herman von Helmholtz, and Wilhelm Wundt.

Illustrated with Portraits. Cloth, $2.50 net. Postpaid $2.70.

Lafcadio Hearn

By Nina H. Kennard.

In her engaging study of the man and his work, Mrs. Kennard is specially concerned to analyze and make more easily understood the contradictions and inconsistencies that revealed themselves in Hearn's strange temperament.

8 Illustrations. $2.50 net. Postpaid $2.70.

Life and Letters of Laurence Sterne

By Lewis Melville.

The most complete and authoritative life of Laurence Sterne. The volume includes all the existing letters of Sterne as well as his famous "Journal to Eliza."

$7.50 net. Postpaid $7.82.

Sociology in its Psychological Aspects

By Charles A. Ellwood.

A work dealing with the origin of society and the theory of social order and progress.

Cloth, $3.00 net. Postpaid $3.17.

Behind the Dark Pines

By Martha Young.

A collection of delightful folk-lore stories of the Southern negroes, gathered in years of patient research by the author.

29 Pen and Ink Sketches.
Cloth, $1.50 net. Postpaid $1.62.

The New City Government

By Henry Bruère.

An expert analysis of commission government in operation and a program for constructive reform of American city management, whether commission governed or not.

$1.50 net. Postpaid $1.66.

Railroad Finance

By Frederick A. Cleveland and Fred. W. Powell.

A description of the various methods of financing railroads in the United States.

$2.50 net. Postpaid $2.66.

Notable Fiction

The Antagonists

By E. Temple Thurston.

A portrayal of the antagonism between a father and son. A study of youth, written with deep sympathy and understanding.

$1.30 net. Postpaid $1.42.

Bella

By Edward C. Booth.

The story of a young man's temptation, showing him drawn in one direction by an alluring woman of the world, and in another by a pure young girl.

$1.30 net. Postpaid $1.42.

The Inheritance

By Josephine Daskam Bacon.

A chronicle of American family life of 40 years ago, told by an adopted English boy.

$1.30 net. Postpaid $1.42.

Carnival

By
Compton Mackenzie

The life story of a ballet girl. "The *Best* Novel of the year."—*N.Y.Times.*

$1.30 net. Postpaid $1.42.

In Cotton Wool

By W. B. Maxwell.

The decline of a handsome, popular man, who was without purpose or ambition in life.

$1.30 net. Postpaid $1.42.

The Charioteers

By Mary Tappan Wright.

A woman's attempt to steer the chariot of her life with a high hand, confident in her own conviction of purity of intent.

$1.30 net. Postpaid $1.42.

A Selected List of Holiday Books

J. B. Lippincott Company

PUBLISHERS PHILADELPHIA

THE 1912 TRAVEL BOOK OF ADVENTURE

The Flowing Road

Adventuring on the Great Rivers of South America. By CASPAR WHITNEY

Mr. Whitney's expedition to reach the unknown land at the head of the Orinoco river through the unfriendly Indians, and almost impassable natural barriers, with only one treacherous native companion, is a chapter of travel adventure which has rarely been equaled. He also tells of his five overland and river expeditions into the heart of South America. **24 Inserts and Maps. 8vo. Cloth. $3.00 net. Postpaid, $3.25.**

FOR THE SPORTSMAN AND NATURE LOVER

Wild Life and the Camera

By A. RADCLYFFE DUGMORE, F.R.G.S.

Author of "Camera Adventures in the African Wilds"

This remarkable book covers certain of the fauna of America, and contains 64 full-page illustrations of game animals in native environments. A book which will be of incalculable value and interest to sportsmen and lovers of natural history in this country. **64 Illustrations. 8vo. Cloth. $2.00 net.**

FINE LIMITED EDITIONS

The Colonial Homes of Philadelphia and its Neighborhood

By HAROLD DONALDSON EBERLEIN and HORACE MATHER LIPPINCOTT

This work describes Philadelphia's colonial homes and family history, giving a picturesque account of the period.
72 Illustrations. 8vo. Cloth. $5.00 net. Postpaid, $5.25.

Old Time Belles and Cavaliers

By EDITH TUNIS SALE

A collection of intimate life histories of the lovely women and high-born men who were the back-bone of our nation in Colonial Days. This volume might be termed "A Family History of Colonial America." These stories of the staunch devotion and stalwart patriotism of our forefathers are inspiring reading.
62 Illustrations. 8vo. Cloth. $5.00 net. Postpaid, $5.25.

THE "GIFTIEST" OF ALL GIFT BOOKS

The Harbor of Love

By RALPH HENRY BARBOUR

Author of "The Golden Heart," "Kitty of the Roses."

This handsome gift-book is unquestionably one of Mr. Barbour's most delightful stories. The scenes are laid in and about the water, and the "Harbor of Love" is reached only after many pleasant surprises.
Beautifully bound. Illustrated and decorated. Small quarto. In a box. $1.50 net. Postpaid, $1.65.

A Dainty Gift Book from Dixie

The Dixie Book of Days

By MATTHEW PAGE ANDREWS

A dainty gift-book of Southern quotations, anecdotes, and historical incidents for every day in the year.
Frontispiece. 12mo. Decorated cloth. $1.00 net. Postpaid, $1.10.

GOOD READING FOR BOYS AND GIRLS

With Carson and Fremont

By EDWIN L. SABIN

A rattling good tale of fearless American pioneers, based on fact.
Illustrated. 12mo. Cloth. $1.25 net. Postpaid, $1.37.

A Dixie Rose in Bloom

By AUGUSTA KORTRECHT

A delightful and charming book for girls.
Frontispiece. 12mo. Cloth. $1.25 net. Postpaid, $1.37.

"Pewee" Clinton—Plebe

By Professor W. O. STEVENS

"Pewee's" adventures at Annapolis will delight many youthful readers.
Illustrated. 12mo. Cloth. $1.25 net. Postpaid, $1.37.

The Boy Electricians as Detectives

By EDWIN J. HOUSTON

The adventures of three boys who form a club to amuse themselves in learning the use of electricity.
Illustrated. 12mo. Cloth. $1.25 net. Postpaid, $1.37.

FINE ART AND ILLUSTRATED EDITIONS

Joseph Pennell's Pictures of the Panama Canal

A set of the original lithographs costs about $400.00. The entire twenty-eight are reproduced in this volume, together with Mr. Pennell's experiences and impressions. Aside from their great value as works of art, these remarkable studies of the Canal will soon have an inestimable historical value as the water is fast being turned into the big ditch. **Beautifully printed on dull-finished paper, and artistically bound. Large 8vo. $1.25 net. Postpaid, $1.40.**

Rabelais' Works

Done out of the French by PETER MOTTEUX

This translation by Motteux, acknowledged to be standard, combined with the admirable and unique illustrations by W. Heath Robinson, makes this an incomparable and fine library edition. **Illustrated by W. Heath Robinson. 2 volumes. 8vo. Cloth, gilt top. $5.00 net. Half Morocco, $10.00 net.**

All the Tales from Shakespeare

By CHARLES AND MARY LAMB, AND HARRISON S. MORRIS

This is the first complete edition of all the tales from Shakespeare containing handsome colored reproductions from the Great Masters who have been inspired by Shakespearean characters.
48 colored reproductions from famous paintings. 8vo. Cloth. Two volumes. $3.50 net, per set.

The Four Gardens

By "HANDASYDE"

The romance, the poetry, and the joys of various classes of gardens. Illustrated in full color with graceful drawings throughout the text by Charles Robinson.
Handsome binding, decorated lining papers, colored illustrations. 8vo. Cloth. $1.50 net.

MISCELLANEOUS

The Grandeur That Was Rome

By J. C. STOBART

This is a companion book to "The Glory That Was Greece." The author's purpose in this magnificently illustrated volume has been to trace the evolution of Roman culture and civilization.
Profusely illus. 8vo. Cloth. $7.50 net.

Monaco and Monte Carlo

By ADOLPHE SMITH

An exhaustive study of economic, social, and political conditions of this most interesting principality, dealing partly with the past history of the state, but more especially with modern problems.
Eight illustrations in color by Charles M. Pearce, and numerous in black and white. 8vo. Cloth. $4.50 net.

Modern Dancing

By J. E. CRAWFORD FLITCH, M.A.

The author discusses the development of all kinds of dancing—the ballet, skirt dancing, serpentine dancing, and the latest classical and Russian dancing, etc.
With 8 illustrations in color and 40 in black and white. Large 8vo. Cloth, gilt top, $3.75 net.

MASTERPIECES OF THE SEA

William T. Richards

A Brief Outline of His Life and Work

By HARRISON S. MORRIS

A brief, sympathetic biography by Harrison S. Morris, whose many connections with American Art make him the appropriate author of a life of the great marine painter. Illustrated with doubletones of this great artist's masterpieces.
Small quarto. Cloth. $1.00 net. Postpaid, $1.10.

A MONUMENTAL WORK

The Mineral Kingdom

By Dr. REINHARD BRAUNS

Translated by L. J. SPENCER, M.A., F.G.S.

An encyclopedic and popular work treating thoroughly every department of the Mineral Kingdom.
91 full-page plates (73 in color). 275 figures in the text. 450 pages. Demi-quarto. Half Morocco. $17.50 net.

AN IMPORTANT BIOGRAPHY

General Jubal A. Early

Autobiographical Sketch and Narrative of the War between the States. With Introductory Notes by R. H. EARLY.

In this volume General Early has dealt with phases of the War, manœuvres of the troops, and plans of the leaders, which no work has heretofore covered. It is written in the conscientious style, true in every detail, that would be expected from the pen of this veteran.
Illustrated. 8vo. Cloth. $3.50 net. Postpaid, $3.75.

Traditions of Edinburgh

By ROBERT CHAMBERS, LL.D.

This handsomely illustrated edition has been prepared to meet the growing demand for this classic work in an appropriate form. It is considered an authority on the traditions and romances connected with Old Edinburgh, and there are few writers of Scottish life and history who have not used to some extent the vast amount of material gathered together in this book.
30 original drawings in color and over 60 pen and ink sketches by James Riddell, R.S.W. 8vo. Cloth, gilt top, $6.00 net.

BOOKS OF UNDOUBTED EXCELLENCE

The following select list of books represents an enviable standard of merit. Each title possesses positive qualities of excellence and is published under the seal, and with the approval, of Yale University. From the standpoint of mechanical treatment the volumes are worthy of their imprint.

GREEK REFINEMENTS

WM. H. GOODYEAR

Curator of Fine Arts, Brooklyn Institute.

This elaborate and beautiful work summarizes the notable discoveries of all observers of architectural "refinements" (which may be defined as purposed asymmetries). The non-technical treatment and many superb illustrations render the work of absorbing interest to those of the reading public who seek a knowledge of the principles of architectural good taste. There is no other work extant dealing with the subject. Royal 4to. Slip case. 240 pages. 119 illustrations. Index, appendices, bibliography. Price $10.00 net; postage 50 cents extra.

YALE BOOK OF AMERICAN VERSE

Edited by THOMAS R. LOUNSBURY

Professor of English, Emeritus, Yale University.

Three printings have been required of this delightful collection within as many weeks. Brander Matthews says of it in the New York Times: "'The Yale Book of American Verse' is the best attempt yet made to present in a single volume the best of American poetry. Professor Lounsbury has performed his useful task with perfect discretion, certain taste and superb skill."

Octavo. Cloth binding. 570 pages. Index. In a slip case. Price $2.25 net; postage 20 cents. Bible paper, cloth binding, $3.00; postage 10 cents. Bible paper, Full Morocco, $5.00 net; postage 10 cents.

AUTHOR'S AUTOGRAPH EDITION, numbered and signed by Editor and Publisher, limited to 150 copies: Full Gilt, Full Levant Morocco, in slip case, $10.00 net; postage 20 cents.

ENGLISH LYRICAL POETRY

From its Origins to the Present Time.

EDWARD BLISS REED,

Assistant Professor of English, Yale University.

The wide-spread demand for this first general history of the English Lyric is proof of its value.

"Professor Reed has brought to his task the necessary knowledge of the scholar and student of literature, and—what is much rarer—taste, judgment, and a broad perspective. . . . It is for his scholarly but far from pedantic treatment of the earlier phases of English Lyrical Poetry that Professor Reed's book will be especially valued."—*The Athenaeum.*

"It is a survey which will interest almost any person who loves good literature."—*Phila. Enquirer.*

8vo. Cloth binding. Gilt top. 616 pages. Price $2.25 net; postage 20 cents extra.

A JOURNEY TO OHIO IN 1810

EDITED BY MAX FARRAND.

Professor of History, Yale University.

The immediate and wide-spread recognition accorded this century-old diary, with its refreshing quality of alertness and vivacity, has exceeded even the confident expectations of the publishers. The first edition is almost exhausted, and a new printing is on the press. This is the first volume in the series of Yale Historical Manuscripts, and possesses rare literary charm as well as valuable historical qualities. 12mo, board binding, 72 pages, price $1.00 net; postage 10 cents extra.

THE MEANING OF GOD IN HUMAN EXPERIENCE

By WILLIAM ERNEST HOCKING, Ph.D.,

Assistant Professor of Philosophy, Yale University.

Of this significant and inspiring volume the London Athenæum says in part: "We congratulate Professor Hocking on having made in this work a vital and pregnant contribution to the philosophical study of religion. . . . He possesses a profound and sympathetic comprehension of the greater mystics. His thesis has in it the authentic quality of originality, of first-hand thought and experience." Crown 8vo, cloth binding, gilt top, 586 pages, index, price $3.00 net; postage 26 cents.

THE PRESIDENT'S CABINET

By HENRY BARRETT LEARNED.

The timeliness of this work added to its exceptional historical value greatly increases its usefulness. The American Historical Review says: "The student of American government no less than the student of American history will welcome this new volume." The New York Sun styles it "a thorough and useful piece of historical investigation." 8vo, cloth binding, 471 pages, index, price $2.50 net; postage 20 cents extra.

The Nation

NEW YORK, THURSDAY, DECEMBER 5, 1912.

The Week

President Taft confined his message to Congress to a long review of our foreign relations, and to an exposition of the theory upon which he thinks they should be conducted. In all this there is, let it be said at once, much that is excellent. Mr. Taft speaks of the successive steps by which it has been sought to rescue the consular service from the spoilsmen. Tracing the movement back to President Cleveland, he shows how improvement steadily followed improvement, until the time came to seek to place the diplomatic service, too, upon a non-partisan basis. By an Executive order of three years ago, appointment to the lower grades was made conditional upon merit shown by examination, and promotion has since that time been made only for efficiency, as is now the case throughout the entire consular service. This represents a great advance; and the President does well to urge Congress to make the reform secure by enacting some such measure as was before it last session for the purpose of firmly basing the foreign service, in both its branches, upon the merit system.

From political or military intervention in Mexico or Central and South America, Mr. Taft evidently shrinks. Specifically referring to the past year's troubles in Mexico, which, as he points out, raised questions of extreme delicacy, he declares that his policy all through was one of "patient non-intervention," combined with "steadfast recognition of constituted authority," and at the same time "effort to care for American interests." The end now bids fair to crown the work; and President Taft's course throughout the Mexican disturbances—if we except the ill-judged and deceptive mobilization of American troops on the border—has been highly creditable. Towards other republics in the West Indies and Central America, he professes intentions equally benevolent, but in some cases these are linked to plans for the control of those countries through the administration of their finances. The President again puts forward the treaties with Nicaragua and Honduras, covering loans, and declares that if they had been ratified the recent revolutionary outbreak in Nicaragua would never have occurred. This is highly disputable. No political troubles were ever to occur in Santo Domingo, after our financial control was established there, but they have done so. Indeed, the treaty would have virtually obligated the United States to use force in Nicaragua, when demanded by our agents, just as it was used startlingly last summer. But the whole discussion is now barren. The treaties are dead.

"If President Wilson stands to his guns and his pledges," says the London *Economist*, "the whole forces of Protection will concentrate on the Senate. Will they succeed better than the bosses in New Jersey? We hope not; though free trade in the States would soon produce formidable rivals for British manufacturers." We can imagine the indignation with which this will be read by any American protectionist. "What audacious hypocrisy," he will say: "an Englishman pretending that he expects America to become a more formidable rival to England through free trade, and at the same time that he hopes we shall take steps towards becoming a free-trade nation! What the man is after, of course, is the ruin of American industry for the benefit of the Britishers." There is one circumstance, however, about the British free-trade attitude which our protectionist must find it hard to reconcile with this view. For forty years, or thereabouts, the protectionists of England, whether calling themselves "fair traders," or "tariff reformers," or "Imperial preference" men, have been trying to hammer into the free-traders' heads the idea that British free trade, under which foreign goods come in free while British goods have to pay big duties in other countries, is a one-sided thing, hurting England and helping other countries; but stubborn John Bull has insisted that he is satisfied with the bargain. He thinks it a good thing for him to buy freely where he pleases, even though he is not allowed to sell freely. So that, after all, in saying that he thinks American free trade would be good for America, and at the same time good for England in spite of building up our enterprises, he may simply be giving us a sample of his standard though silly free-trade talk.

The zone-rate system of the parcels-post service which is to go into operation on the first of January flies in the face of the spirit of that post-office policy which is associated with the name of Rowland Hill, and which has governed postal management and postal progress throughout the world for three-quarters of a century. That distinctions and discriminations should be made only for important and adequate reason, that the gain from uniformity and simplicity is sure to be enormous, that a close reckoning of expense, and adjustment of charges to it by minute classification, does not pay either from the standpoint of the post office or from that of the public—these are the commonplace presumptions of postal policy. From this it does not follow that there should be a uniform rate for parcels throughout the vast area of the United States. In the case of a five or ten-pound package, the expense of the long-distance transportation is very considerable, and in order to make a uniform rate throughout the United States it would be virtually necessary both to carry parcels for great distances at a heavy loss and to make the general rate so high that a large part of the advantage of the service for moderate distances would be sacrificed. For this reason, and also on account of legitimate commercial considerations, the parcels-post service should be conducted on some kind of zone-rate basis.

But while a zone system of some kind is desirable for this country, such a zone system as that prescribed by the act of August 24, 1912, is not only unnecessary, but absurd. To divide the country up into thousands of little quadrangles, and to make each post office the centre of a series of seven concentric circles by means of which the quadrangles are classified as belonging to the first, second, and so on to the eighth zone, is quite needless. Only a very rough adjustment is attained by the elaborate and highly inconvenient method of the present law; and there is an extremely simple method which would serve the same end. It may be desirable to start with one small zone of special low rates for what may be called local service; but apart from this the whole system should be based on the States as units. For the purpose of fixing rates, each State should be represented by its geographical centre; and, whatever distances be adopted as a basis for the zone system, each zone, for any given State, should comprise the whole of any State whose centre is within the specified distance of the centre of the given State. Thus the Post Office Department would, once for all, make out, for each State, a list of those States which comprise its first zone, its second zone, etc., and this one list would be all that anybody in a given State would have to consult in order to know the postage required on any package. Those in the habit of sending packages frequently would very soon know the zones by heart so far as their ordinary business is concerned.

There may be practical politics, but there certainly is no social justice, in the proposal to force Mr. George Perkins out of the Progressive party. We can well understand the report that Mr. Roosevelt is to change his plans, and go to the Chicago Progressive conference expressly to stand up for his chief financial backer. It is no doubt true that Mr. Perkins's prominence in the new party was used to discredit it, particularly in the West. His name may, as some Progressives sorrowfully admit in private, have driven away thousands of votes among the rude Western farmers. But if all this was an injustice, as the Progressives all along said it was, is the party which is devoted to justice, whether it immediately triumphs or not, going to abandon a man simply because he was misunderstood? Can it cling to a Flinn and throw over a Perkins? At all events, Mr. Perkins is, we are glad to see, determined to stick. He has taken an oath to make this country a better one for his children to live in, and is not to be shaken by mere gossip. He will trust in the Progressive party though it slay him. It is not with him a question of leadership. He is as ready, nay, as eager, as Col. Roosevelt himself to be hereafter simply one in the ranks. If necessary, he will make his own the words of Lord George Bentinck, when asked to lead the Tory revolt against Peel, and say: "We have heard too much about leaders. I will be the last of the rank and file."

The National Guard Convention at Norfolk is evidently to be used to push the plan for Federal pay for the militia. We have already gone on record as wholly opposed to it, and sincerely trust that all the forces now combating the rapid growth of a military lobby at Washington, and of militarism generally, will promptly bring their influence to bear. Certainly, no such far-reaching measure ought to be passed without the most thoroughgoing public discussion. Primarily, it is another blow at States' rights, and virtually means the final step in the Federal Government's taking over the militia. Yet if there is one thing clear in the intent both of the Constitution and its founders, it is that the militia of the "several States" should be under the sole authority of the States. Moreover, since the militia system has been successfully carried on for 136 years as a voluntary and unpaid service, save when the troops are in camp, there is manifestly no genuine need whatever for pay.

Col. Silas W. Burt, who died on Saturday in his eighty-third year, was one of the last survivors of that fine group of devoted workers to whom the country is indebted for the introduction and the successful establishment of the merit system in the Federal service, and, in a less but still very notable measure, in our State and municipal governments. The hard fight that the spoils system still makes to hold on to all that is left to it gives but a faint idea of the deathly grip it had on our whole political system when the little band, of whom Dorman B. Eaton and George William Curtis and Edwin L. Godkin were the most influential leaders, made their persistent assault upon it; nor is it easy now to recall the doubts as to the reality and efficacy of the reform in the early years after the law was enacted. It was generally looked upon, even by a large portion of the better class of newspapers, as a goody-goody sort of affair, which our red-blooded citizens would never allow to take the place of the stalwart American doctrine that to the victors belong the spoils. It was largely owing to the practical embodiment of the new principle in the person of vigorous and virile men like Col. Burt that this notion was overcome.

"City forest" may sound like a contradiction in terms, but it is the name officially given to an experiment that is under trial at Syracuse. As soon as announcement was made by the State College of Forestry at Syracuse University that the College wished to coöperate with woodlot and timberland owners in placing their holdings under scientific forest management, the Water Bureau of the city applied for aid in the care of 150 acres of second-growth timber. Evidently, there is no great amount of "town and gown" feeling at Syracuse. Sample plots were then laid out over the tract in question. Each plot is treated differently. One receives a thinning for the purpose of getting rid of the old trees and trees that will not grow quickly into timber. On another attention is paid to favoring the natural growth on the ground. On a third, evergreens will be planted. One or two plots will be left untouched, in order to furnish a basis of comparison with unattended timberland. Meanwhile, the timber removed from the tract is cut and put upon the market. It is estimated that it will return within a reasonable time 2½ or 3 per cent. compound interest. But the value of such an example of conservation as this seems to be is beyond mathematical calculation.

Colleagues and former students of Prof. Crawford Howell Toy, of Harvard University, have paid him a handsome tribute of affection and regard by contributing to a volume, entitled "Studies in the History of Religions," the expense of which Mr. Jacob H. Schiff has generously assumed. This *Festschrift* took shape on the occasion of Professor Toy's seventy-first birthday, in March, 1911, in a small faculty club at Harvard, over which he has presided since 1891. Six of the members of this club undertook the editing of the volume, or contributed to it—Profs. F. N. Robinson, C. H. Moore, G. F. Moore, Sheldon, Lyon, and Kittredge—and scholars at Oxford, Johns Hopkins, Yale, Bryn Mawr, Dr. W. H. Ward of the *Independent*, and others have gladly added to the imposing collection of articles. Dr. Toy was a modest soldier in the Confederate army, which he joined when a professor of Greek in Richmond, and afterwards he taught at Harvard for twenty-nine years, before retiring as Hancock professor emeritus. Always he has lacked the power to advertise himself. What could gratify such a man more than the willingness of associates and former students to lay at his feet the best products of their research and mature knowledge?

The teachers of Utah are determined that the children in that State shall love the flag whether they will or no. What is more, they will have no trifling with the subject on the part of any teacher who may lack faith in the efficacy of compulsory methods for instilling the sentiment of patriotism. Neither teacher, nor superintendent, nor school board—no, not even the Legislature—is to have any say in the matter if the recommendation of the Utah State Teachers' Association is put into effect, for it calls for an amendment of the State Constitution making the teaching of patriotism compulsory in the public schools.

To the remarkable series of convictions obtained by the District Attorney of New York the finding guilty of Hyde comes as a sort of triumphant climax. For there had been an almost universal expectation that this prosecution would not be successful. The crime charged was rare. The proof was technical and difficult to get before a jury. And Hyde had so long fought for delay, and had, at the last moment, produced what appeared at first to be so perfect an alibi, that even those who were fully persuaded that he had grossly abused his power as City Chamberlain felt that it would be impossible to convict him. But his alibi was shattered by the production of telephone records. The jury evidently believed Robin's testimony against Hyde, and was as plainly impressed by the bank records laid before it. In finding a verdict in accordance with the evidence, the jury and the District Attorney's office have rendered a public service as great in its way as the bringing to justice of Becker and the assassins of Rosenthal.

The wicked newspapers are at it again. Not content with defeating Mr. Roosevelt by "choking the channels of information," they are now overloading those same channels with false information in regard to that most beneficent of monopolies, the New York, New Haven & Hartford Railroad. Fortunately, an unnamed director of the road is at hand to expose the whole dastardly business in this wise: "I am quite aware of the large amount of public comment the New Haven Road is attracting. I think if the newspapers stopped publishing these things and these lengthy reports, everything would come out right. The newspapers are at the bottom of half or all of this hue and cry." Exactly. It is the newspapers that have so terrorized Governors, Legislatures, Mayors, ministers, and the great body of commuters as to compel them to denounce so unjustly this great railway. Investigation will, we are sure, prove that those mass meetings of protest going on in Connecticut were paid for and organized by the wicked press. In fact, we should not be surprised if it should appear that enterprising reporters had deliberately caused all those wrecks by breaking rails and pulling out spikes.

If there is any lingering doubt in anybody's mind whether the Panama Canal is worth all it has cost, it will be removed by the announcement that the Government is to issue a special series of stamps in commemoration of the achievement. One reason why world's fairs have long outlived their original usefulness is because they give such an excellent excuse for issuing new sets of stamps. We do not speak from the narrow position of the stamp collector. Where is the man with soul so dead as not to brighten up at the sight of the most unwelcome letter bearing a blanket stamp with a picture of some historic event? During the period when a new series is flourishing, envelopes containing the most unattractive advertising matter are carefully preserved until the stamps have been inspected, on the chance that some one about the house or the office may not have seen the new one-cent or five-cent design.

Mr. Bonar Law, as leader in the House of Commons of the party which to-day asserts that it represents more truly than ever before "the gentlemen of England," continues to illustrate in his speeches what Mr. Asquith has characterized as "the new style." Speaking recently to a great party gathering, Mr. Law professed to be holding himself under severe restraint. His real thoughts about the Liberal Ministry he could not trust himself to express, and so he contented himself with mildly calling them "a Government of gamblers and adventurers, which, if it is allowed to carry out its programme, will lead this country headlong to ruin." But the Conservatives are not only the party of the aristocracy and of gentle breeding, they are the party of law and order. Hence it was peculiarly fitting for Mr. Law to assert that he and his fellow-Conservatives would never submit to a law duly enacted by the Parliament of Great Britain. He referred, of course, to the pending bill for Home Rule in Ireland. He fairly gave notice that he and his party would do their best to "wreck this bill in the House of Commons"; and he added that, if it became a law, "we shall wreck it then." If a responsible Irish Nationalist had said this, there would have been a loud Conservative cry for a Coercion act.

The fourth Russian Duma, which met in St. Petersburg on Thursday of last week, apparently belied predictions in electing for its president a candidate supported by the Centre and the Left against the reactionary Right, by a vote of 251 to 159. To strengthen its grip on the representatives of the people, the Government had resorted to the usual manipulations of the electoral law which have hitherto been so successful in restricting the vote to an inconsiderable fraction of the Russian people. The second and third Dumas were known as "Landlord" Dumas. For the latest elected body the Government set out to increase the strength of the clerical element among the Deputies. Up to the last moment it appeared to have obtained more than it bargained for. An actual majority of priests or deputies under clerical influence seemed probable, and the Government faced the possibility of having to do business with a body of reactionary Deputies more royalist than the King. By what supplementary tinkering such an outcome has been averted the dispatches have not told us. What is plain is that the Czar has now as docile a Parliament under his control as the last one, and that the chances of thorough reform are as remote as they were a year ago.

FORMING THE OPPOSITION PARTY.

Conferences about the future of political parties in this country are already being held, and more are to come. The Progressive leaders are to have a formal meeting in Chicago on December 10. But the Republicans will not be behindhand. They are busy putting their heads together and planning. President Taft has let it be known that he means to throw himself into the work of reviving and strengthening his party. He makes it a condition that he himself is not to be thought of as again a candidate. His appeal to Republicans is plainly meeting with response. Ex-Gov. Durbin of Indiana writes to the New York *Tribune* an expression of what is obviously a widespread and rising sentiment: "We shall be reinforced, not dispersed; our party will fight and win again—it will not die."

In all this matter, it is important to keep attention fixed upon the first step that is necessary. This is to form speedily an Opposition party that shall be as effective as possible. Let those who will speculate about ultimate victories and dream of distant millenniums. What we need at once, under our system of government by party, is, to vary the English phrase, Uncle Sam's Opposition. A new Administration will shortly be in power. But it is in its true interest, as well as in that of the country, that there should be a strong party to debate its measures, to scrutinize its policies, and to check any dangerous tendencies which it may display. In the House of Representatives the Democrats will be in strength not only overwhelming but embarrassing. Every cool student of politics is convinced that President Wilson could get on better with a smaller majority. All the more urgent the duty laid upon the minority to be vigilant and aggressive, and to put itself into the position of offering to the people, sooner or later, an alternative party, which they may use, if they desire, to punish or replace the party in power.

Starting with this early and specific need, what party bids fair best to supply it? There can be but one answer. The advantage of position and of opportunity is entirely with the Republicans. They have, to begin with, a great superiority in the numbers of men stationed where they can begin the fight. The popular electoral vote must be put aside for the moment. What we have to ask is where lies the great bulk of the Opposition strength in Legislatures and in Congress. It is in those bodies that the Opposition must be rallied. But the men on the ground, to be rallied, are nine-tenths Republicans. In the United States Senate, as it will be constituted after March 4, only a single Senator desires to be labelled "Progressive." In the House, the new party will have but a handful. If there is to be any effective Opposition at all, it will necessarily, for the next two years at least, be composed of Republicans.

These are the palpable facts, but what about the underlying principles? A party should not be thought of merely as an organization for carrying elections. The Opposition ought to mean more than just a club with which to beat the party in power over the head. As a great organ of popular expression, as well as of government, a party should have some definite convictions for which it stands, and should present a programme capable of being realized in legislation. Precisely, say the Progressives, and just there is where we come in strong. If it is a question of party principles, where are there any comparable with ours? And if the decisive thing is a definitive legislative undertaking, what other party can hold its own with ours? But in this there is something overlooked. A distinct party has to have something distinctive. To justify and maintain a separate life, it must mark itself off sharply from other parties. It may be for free trade, for example, or for protection, but must be so in a way to make it impossible to confuse it with another party. But can this be said of the Progressive party? Are not most of its principles already embodied in other parties? Is not its programme of law-making of a sort to be accomplished without the need of a new party? May it not prove that the Progressive movement of 1912—so far as it can be detached from motives of political vengeance or personal ambition—really had its lasting significance in quickening and leavening the old parties, rather than in beginning a new one?

We ask these questions in good faith. Upon the answer to them it will depend whether the Progressive party has any promise of long life as an organization by itself. It surely is not yet able to stand as a real party of Opposition. In time, it may push the Republican party aside, or may be assimilated with it; but at present it is not entitled to be reckoned as the second, or alternative, party, in either the nation or the more important of the States.

THE UNION PACIFIC DECISION.

Monday's decision of the Supreme Court, declaring illegal the holding by the Union Pacific of a controlling interest in the Southern Pacific stock, is of importance not only as part of a singularly interesting chapter of railway history, but in its bearing on the present railway situation. The Southern Pacific purchase belonged to what may be called the second period of the late E. H. Harriman's career. The first, which covered the years from the Union Pacific reorganization in 1897 to 1900, was marked by notable achievements on his part in building up that recently bankrupt property to a sound and profitable physical condition. The second embraced his efforts to acquire a direct connection westward from the main line Union Pacific terminus in Utah to the Pacific Coast. It was then that Harriman's negotiations for the Central Pacific property, owned by the Southern Pacific, came to a head.

His purpose was absolutely legitimate; it was the general purpose of the Congress which chartered both Union and Southern Pacific during the Civil War. The two lines were indeed constructed and owned by different groups of capitalists, but the belief of the day was that they would eventually be united into one great through line from the Missouri River to the Pacific. That logical union had never been effected. Union Pacific had been over-capitalized and badly managed, and long before it was able to contemplate a merger, C. P. Huntington, then building his own transcontinental line from southern California to the East, had, through lease and part ownership of stock, tied the Central Pacific hard and fast to the Southern Pacific system. Harriman's offer to buy the Central Pacific alone was refused. It was only after Huntington's death in 1900 that Harriman finally succeeded in his purpose, through the bold stroke of buying control of the whole Southern Pacific system, whereby, of course, the Union Pacific got its coveted through connection from Ogden to San Francisco.

This sequence of events is important to remember; for the Supreme Court is careful to intimate, in its decision, that while ownership by Union Pacific of the parallel and competing Southern Pacific Railroad is illegal restraint of trade, its ownership of Central Pacific alone is open to no such charge. The holdings of Southern Pacific must be surrendered, but the defendant company is invited to formulate a plan for separating Central Pacific from the larger system and retaining it.

We have described the Central Pacific negotiation as belonging to Mr. Harriman's second period. It is probable that the manner in which he succeeded in getting possession of that property, through buying the far more important company which owned it, prompted his active brain to conceive the daring exploits which made up the third, the most spectacular, and by all odds the most objectionable, chapter of his railway career. Very soon after the Southern Pacific incident came his failure to get for his company a partial control of the Burlington & Quincy, followed by his attempt to capture the Northern Pacific itself, which had acquired the Burlington.

In the one case, as in the other, Harriman discovered what seemed to be unlimited possibilities of raising money on Union Pacific's credit, for use in buying up other railways. Like other great capitalists of the day, he completely lost his head in the glamour of such achievements. The disastrous result of the Northern Pacific corner taught him nothing. He went on buying through Union Pacific's credit and placing in Union Pacific's treasury huge blocks of stock in railways all over the United States. He boasted publicly at an Interstate Commerce Commission hearing that he should go on doing so as long as he lived. His death put an end to the process, if indeed it had not already received its quietus from the panic of 1907, in causing which his exploits had no inconsiderable share.

All of these purchases of stock in other railways had been attacked in the Government's suit as action in restraint of trade, equally with the purchase of Southern Pacific. The Circuit Court decided in favor of the company as regards all the purchases, but on different grounds. The purchase of Southern Pacific was not in restraint of trade, because the essential purpose of the merger was to get Central Pacific, which was not a competing line. The purchase of stocks in other railways was not such restraint, because they represented in no case a controlling interest. The Supreme Court now upholds the lower court's decision as regards these minor acquisitions, but reverses it in the Southern Pacific matter. Looking beyond technicalities to facts, the court declares that Southern Pacific and Union Pacific are parallel and competing lines, and that their union under a single management involves restraint of trade.

It will thus be seen that the decision does not touch the most dangerous part of Harriman's idea—the conception of a railway as a corporate machine whose credit may be used to buy stocks in other railways not in any way needed for operating connections. The Anti-Trust law was apparently powerless to touch this practice, so long as actual control of competing lines was not acquired. Nothing is more certain, however, than that if Harriman's plan had been generally imitated, the practice would have been successfully attacked under other laws. Meantime, so far as concerns the Southern Pacific, it is plain that a highly interesting operation in company finance is at hand in the Union Pacific's disposition of its holdings of that stock in compliance with the Court's decree

---

BALKAN COMPLEXITIES.

Sir Edward Grey's proposal that the ambassadors of the Powers at any designated European capital should meet in conference on the general issues arising from the Balkan war, is unmistakably an indication of the desire for peace that animates at least two partners in the Triple Entente, namely, Great Britain and France. That the Czar also is averse to precipitating a conflict with Austria is made clear in the latest authoritative dispatches from St. Petersburg. In the rival camp, Germany, it has been admitted, has been coöperating with Great Britain to find a way out of an extraordinarily tangled situation. Apparently, therefore, there is no reason why the severe crisis of nerves that Europe has been experiencing these last three weeks should continue much longer. It has been a period of exaggerated fears and exaggerated suspicions. But such fears and suspicions have arisen less from the existence of irreconcilable conflict of interests among the Powers than from the difficulty of arriving at an understanding on a problem that involves so many contingencies and readjustments. To put it bluntly, the diplomats are badly mixed up. Sir Edward Grey virtually says so when he argues that an ambassadorial conference such as he suggests would do away with the necessity of interchanging dispatches among so many chancelleries. Take nearly a dozen Foreign Offices, imagine how every question brought up in any one of these must be communicated and re-communicated to every other Foreign Office, and only a mathematician can figure out the number of permutations and combinations involved. To cut loose from the telegraph wires and get a half-dozen men around a table would greatly clarify the situation.

The British proposal, it should be noted, avoids raising any question that might wound national susceptibilities in any quarter. It does not go into the issues at stake between Turkey and the Balkan states. It proposes to discuss the questions of the Dardanelles, the Bosphorus, and the Ægean islands, phases of the Near Eastern question in which Europe as a whole has a legitimate interest. It is true that Albania, too, is included, and it is in Albania that Austrian and Servian interests have clashed. But, strictly speaking, the issue between Austria and Servia is not an Albanian problem, but an Adriatic problem. Servia's claim to an outlet upon the Adriatic may be reconciled with Austria's insistence upon an independent Albania. At any rate, for Sir Edward Grey to include Albania in the programme of the conference is to admit that the status of that region cannot be left to be settled between the Balkan states and Turkey, and is thus a concession to the Austrian point of view. Undoubtedly, it is in the British Foreign Minister's mind that when once the ambassadors of the Powers take up the discussion of Europe's "general interests" in the Near East, their proceedings will react on the specific problems which will lie outside the scope of the conference. The terms that Bulgaria may exact from Turkey, the terms that Austria and Servia may arrive at, are not to come under consideration. But inevitably the negotiations between Sofia and Constantinople, or between Vienna and Belgrade, will be affected by any approach to an agreement that may be attained at the proposed conference.

If such a conference does meet, it naturally brings up the question whether a general European Congress to deal with the entire situation in the Near East under its new aspect is probable. The temper of the parties most concerned is unquestionably hostile to such a Congress. The Balkan states remember the Congress of Berlin. Even if they are admitted to the Congress on a basis of equality with the Powers, there is no assurance for Bulgaria, Servia, and Greece that they will not be deprived of a goodly share of the prize which has cost them so heavily. With so many "honest brokers" in the field, the outcome becomes highly speculative. Nor is Austria willing to submit what she regards as her rights to general European arbitrament. She took this position four years ago when Great Britain and France brought forward the suggestion of a European Congress for dealing with the situation arising out of the annexation of Bosnia and Herzegovina. Only on the understanding that a Congress of the Powers will limit itself to ratifying agreements privately arrived at among the interested parties, is Austria reported to be willing to entertain the idea. Merely to summon together an international registry bureau would be hardly worth the trouble, especially as the obvious need of the moment is the removal of difficulties that press for an immediate solution.

But whether the British proposal bears fruit or not, its effect must be to reassure public opinion. It would be bad enough if a general European war should come about as the result of irreconcilable differences among the Powers. But that Europe should be allowed to "drift" into war, as the phrase now runs, is an inconceivable thing. The diplomats have not gone about their business skilfully. They have given way to panic at a time when that most sensitive of instruments for registering the course of the future, the stock market namely, has shown no tendency to take fright. Neither at London, Paris, nor Berlin has the Bourse given any indication of taking the prospect of a European war seriously. And European editors who are so thoroughly used to approaching questions of international politics from the angle of finance are much beset to explain why their news columns should be so excited while their stock market reports are so calm.

KIPLING'S SCATTERED VERSE.

Mr. Kipling has collected virtually all the verses and chapter-headings scattered through his prose works, with the exception of the "Jungle Books" and the "Just So Stories." They make a full-sized volume, which he calls "Songs from Books." A cynic might remind him of Dr. Johnson's dictum: "He who makes a book out of books may be useful but can scarcely be great." But it is convenient to have these snatches of song collected, and, in a certain sense, they are more significant than the volumes of his poetry published as such; since as originally designed they represented, as it were, the poetic pith of his prose, and in prose his main success was achieved.

It has required a few years of thinking of other things for most of us to realize how much Mr. Kipling was in accord with the age he heralded. His perfect and immediate adjustment to the times seemed, indeed, almost uncanny. For his message is never phrased uncertainly, as though he were feeling his way: it invariably has the positive manner of an oracle speaking. His philosophy came to him in a flash, and has remained quite distinct and unchangeable. To sum up his outlook in a word, many have called it vision of empire. Yet if that were his chief concern his words would have lost most of their weight in these days when large portions of the British Empire are keeping much by themselves. Kipling's hope of a mighty Britannia serves rather as a concrete structure for his ideas in somewhat the same way that Dante gained sharpness of vision by adopting the mechanical notion of Hell, Purgatory, and Heaven. And though the ideas of succeeding days have in each case altered the framework, much of what is attached to it remains intact.

Thought of the sun never setting upon British rule helped Kipling, we may be sure, to his extraordinary feeling for the sweep of space and time. In this he is romantic, though romantic in a peculiar sense. Whereas the usual Romanticist strove to get away from the actual world, Kipling has little use for experiences which time and space do not record, to the complete understanding of the average man. A lover sent by his lady in search of blue roses, returns with the conviction:

> Mine was but an idle quest—
> Roses white and red are best.

Yet Kipling is much absorbed in out-of-the-way places and in the deeds of ancient days, for in one way or another these can be brought into touch with his own interests. His fancy runs easily to the South Pacific,

> Where the cuttles rest
> Moored o'er the darker deeps that hide
> The blind white sea-snake and his bride
> Who, drowsing, nose the long-lost ships
> Let down through darkness to their lips.

Nor has any one felt a greater thrill than Kipling over the foresight of Romulus:

> But when his brother leaped the wall
> And mocked its height and make,
> He guessed the future of it all
> And slew him for its sake.
>
> . . . .
>
> Foreseeing Time's imperilled hopes
> Of Glory, Grace, and Love—
> All singers, Cæsars, artists, Popes—
> Would fail if Remus throve.

This is the spirit with which we still conjure. The works of Neolithic man—of whom, indeed, Kipling sings—catch the fancy when shown to be definite stepping-stones to our own brave selves. Admit a material meaning for the world, and Kipling's reading of the present age enlightens all ages. Says the Bricklayer:

> I tell this tale, which is strictly true,
> Just by way of convincing you
> How very little, since things were made,
> Things have altered in the building trade.

Sense of fact, of positive achievement, is the breath of Kipling's creation. Even in his most indulgent moments he has no sympathy with men of different conviction. What though his own kind should be wrong (the supposition is wholly rhetorical), at least

> they tell the lies I am wonted to,
> They are used to the lies I tell.

Nor has he any doubt as to what constitutes a fact. In this volume of songs there is precious little use of the pretty details of flowers and birds and stars which usually enter into lyric poetry. He seems ill at ease when he touches them and is always glad to get back to such a manly matter as "the sting of the rowelled steel." Nowhere in the book is there a sentiment which a man may not enjoy in the presence of his manly fellows. There are no halcyon days, or dreaming for the sheer beauty of the dream. What this all means has been made clearer since the views of M. Bergson have become so much the order of the day. It has been said that M. Bergson has arranged a series of impressions got from fleeting outward facts, yet no less impressions on that account; and hence is a counterpart of the Romanticists, whose fleeting inner feelings also yielded sacred impressions. In either case impressions are made the court of final appeal. Since Mr. Kipling first began to write, what he labelled "facts" have had more and more to submit to inspection before being permitted to pass as such, at least to the exclusion of other writers' facts. The doubters are not so numerous even yet, but their number is just great enough to make one suspect that most of this poet's message, though not yet outworn, is on the very point of passing. Some of it, of course, will always remain, as the work of one who could handle a style, in verse or prose, and who saw with amazing clearness what he saw.

ROBERT COLLYER.

Robert Collyer's great span of years made him a survivor of his own active fame. This fact will cause many who did not know the manner of man he was to be moved by his death to dwell mainly upon the romance of his career. In it there certainly was enough to stir wonder and quicken the imagination. For a self-taught boy to have passed from his Yorkshire forge to become a spiritual leader and a public force in the two chief cities of the United States, and to acquire a name throughout his adopted country which stood for years as the symbol of religious freedom and humane aspiration, would alone have made him appear a character apart. But such things do not come about by chance. In his case, too, it was personality that swayed circumstance. The "blacksmith-preacher" was as far as possible from the robustious type of ex-baseball players and college athletes tinged with religiosity who nowadays get a brief hearing in churches and elsewhere simply because they seek to sensationalize Christianity. In these modern curiosities of the pulpit there is no root, and they soon wither away. Dr. Collyer could not have held on his inspiring course for full fifty years if he had not had in him deep wells of thought and feeling which were continually renewed.

His nature was, indeed, a rare combination of manly qualities and delicate perceptions. Out of the strong came forth sweetness. It must have been that flowers grew near the young man's smithy. From the beginning of his public work he displayed, with every proof of vigorous thinking and positive convictions, poetic sensitiveness and a sympathy as wide as humanity. It was this happy union in Robert Collyer of gifts and traits seldom found together that gave him his singular appeal. His style of speech was also a thing by itself. He had brought with him from youth a fondness for the swift and sure words of homely English, and it abided with him. This racy language which he used might have seemed affectation in another; from Dr. Collyer's tongue it fell trippingly like the native means of expression that it was. The dress of his thoughts went perfectly with his physical appearance. Virile yet tender, a doughty champion but always overflowing with the milk of human kindness, he was, in his prime, a great figure in the pulpit or on the platform, and even when well-stricken in years he was a benignant presence.

In the long sweep of his life he saw many changes in the attitude of Americans towards religion and churches. In one of these at least Dr. Collyer had good reason to rejoice, for it was in the line of that breadth of tolerance for which he always stoutly contended. He lived to see the old bitterness among different Christian denominations largely disappear. The Unitarian church, to which he gave his devotion and service, was by many hotly denied the title Christian, at the time that he began his ministry. But that is all gone. It represented a sentiment which to-day seems as dead as the last of the ichthyosaurians. Theological differences may still remain real and be fought for honestly, but before such a life as Robert Collyer's the most bigoted intolerance grounds arms. Emerson was a Unitarian, and his friend, the seamen's preacher, "Father" Taylor, was severely orthodox; but when Emerson died and some one intimated a doubt of his eternal fate, Taylor gallantly remarked: "Well, if Emerson has gone to hell, all I can say is that the climate will speedily change and immigration will rapidly set in."

For organized Christianity and the value of public worship, it should seem that Robert Collyer came to have a stronger regard as his experience grew riper. In his early years at Chicago, he used sometimes to appear to hold lightly the place of the church in modern life. He wanted the religious instinct to be unfettered. He believed in Christianity out of doors and under the open sky, in the spirit of Longfellow's lines, inviting the devout to go into the woods to learn that "there may be worship without words." But it was noted, at the time that Dr. Collyer came to New York, that he took for the text of an early sermon: "I was glad when they said unto me, let us go into the house of the Lord." He preached then, and often later, of the indispensable functions of the church, both in meeting the longings of pious souls and standing as a visible witness to religious truth. This was no narrow ecclesiasticism, but simply a frank recognition of the enduring power of the church that is praying yet, a thousand years the same, though kings and empires have come and gone. It was in line, too, with all those ideas about the "institutional church" which have become so pervasive and so fruitful in recent years.

Dr. Collyer has been referred to as one of the last of the great preachers. It is sometimes said that organized Christianity has become so formal and church activities so extended that there is no longer a place or demand for high and moving preaching. Let Robert Collyer's life answer that. The pulpit still offers room and verge enough to a great personality. Emerson has somewhere a passage about a man of true native force being able to make his way and do his work even under the oldest and mouldiest conventions. Those who despair too quickly of the future of the pulpit because, as they think, it has become hopelessly formalized, should ponder upon what happens when a sturdy child of nature, with the love of God in his heart and a pulse that beats with every human wrong or misery, gets up to preach.

GEORGE MEREDITH IN HIS LETTERS.*

These volumes dispel persistent and sensational legends as to the paternity of George Meredith. As might be expected, the fact is more interesting than the legend. Meredith's father inherited and ran into the ground the excellent tailoring business of his father, Melchizadek, at Portsmouth. Melchizadek, a fine figure of a man and popular in all circles, is, naturally, no other than "the Admirable Mel" of "Evan Harrington." And here it is at least a noteworthy coincidence that Browning, in poetry Meredith's closest affinity, had a butler in his near ancestry. There is a temptation to draw a biologic inference as to the causes of a certain exuberance and incoherence in poets. It is safer to remark, perhaps, that Browning's butler grandsire has his memorial tablet, owing to the efforts of that sturdy democrat, the late Frederick J. Furnivall, whereas Melchizadek Meredith still awaits his honorary inscription. Yet the grandson's portraiture of the "Admirable Mel" may seem to suffice.

I.

It was probably the chance of George Meredith's being sent to the Moravian School at Neuwied-on-Rhine that made a singularly cosmopolitan writer of the tailor's son. Only so could he have got the training and impetus that kept a high sense of vocation through fifty years of drudgery as a publisher's reader. One may say also that without this near-hand survey of potent philistinism abroad, he would hardly have attained that detached and critical view of British civilization which is his peculiar philosophic advantage. Of course, such enlightenment came gradually. The first letter in this collection, written in 1844 to a Neuwied schoolmate, breathes an exaggerated pietism; the last, penned nearly sixty-five years later to Theodore Watts-Dunton, is a lament and eulogy on the death of the most pagan of poets, Swinburne. Between lay much hazardous tasting of the tree of knowledge, the bankruptcy of a great love, the rebuilding of a new happiness, valiant toil, constant alacrity in the face of bodily weakness and inner discouragement. No writer ever made his fight more bravely, and while the loving nature of George Meredith depended much on such friends as Frederick A. Maxse, John Morley, and Leslie Stephen, on the whole it is he who always gives. In fact, the first impression of these familiar letters is of an inordinate expenditure, both of emotion and intellect. They move one beyond the wont and propriety of their kind. Some sense of this makes the editor explain that the collection is primarily for Meredith's intimates. An outsider, however devout an admirer, will at times have a feeling of eavesdropping.

It is precisely this immoderateness about the letters that makes one doubt whether the most fascinating memoir of many years past is an addition to epistolary literature. In his letters Meredith was emphatically an absolutist, saying precisely what he had to say with the maximum emphasis. To be sure, there are admirably playful streaks in the correspondence, but usually to be playful meant to be riotous; witness the letters to William Hardman, "Friar Tuck." Now, the best familiar letters, by which, I suppose, a Briton means those of Walpole, Cowper, Lamb, and Edward FitzGerald, imply a certain discretion. Not, as is often maliciously suggested, a prevision of the literary executor, but at least the vision of the recipient within his social category. Walpole and Edward FitzGerald did not address bare isolated souls; they kept some sense of an audience; Paris and London rose behind the particular correspondent. Nothing is really abrupt in letters of this kind; they are based on an exquisitely flexible decorum. Already I hear the protest of admirers of these letters of Meredith against the application of etiquette to familiar correspondence. If the Meredith letters do not fit the categories, so much the worse for the categories. Here I can only say, first, that the question is not of good or bad letters—Meredith's are marvellously good—but of the kind of epistolary goodness that makes for literary permanency; and, next, that the question is a much larger one, namely: how much of the immediate sting of life is compatible with art? We shall best come to terms on these wide issues through analysis of the correspondence itself.

The grievance of an excess of life is rarely raised against either books or familiar letters, but listen to this: Meredith has to tell Hardman about a riding accident befalling "sons," Arthur Meredith. "My little darling was carried off, fell, dangled to the stirrup, and was dragged headlong over the furze." The father's imagination leaps at the hideous possibility. "Had he been kicked, or dragged on a road, I should have had a shattered heap of all I loved given to my arms." The concreteness of the shudder, most natural under the conditions, is what at once fascinates and repels throughout Meredith's writing. It was Mr. Brownell, I think, who first noted the excess of drastic physiological analysis in the master. Or if one wished to exemplify the combination of the lucid comic spirit with tenderness—a dominant theme of the famous "Essay on Comedy"—it might be done from this note to a friend whose wife, apparently, has let a flirtation run to extremes:

> As to the temptation, it was Eve's own doing, born of champagne and the promptings of her blood. . . . She is a well-meaning girl. Be kind to her. Do not grow ironical. Forbear from satire at tender intervals. Make her believe (she will so readily!) that she is never ridiculous, or that you never see it, which is a subtler flattery, for woman is cute, and would rather that you should have the bandage on your eyes than that she should.

The epigrammatic veracity and tenacity of such passages equals that of the novels. Whether the suave muse of familiar correspondence is not overfreighted with such jewels, the discerning reader may judge.

II.

So compact with various human wisdom are these pages that a reviewer is perforce driven to categories. On none could one go wrong. Ten years before Ruskin had set Cockneydom hunting Carpaccio's painting, Meredith wrote to Tom Taylor, "Do you remember the Carpaccios in Venice? Surely, justice is not done to his extraordinary sweetness and richness. If I did not love Giorgione and Titian so much, I should rank him my favorite. His faces are as sweet as Fra Angelico's, with variety and humanity superadded." From the whole field of the arts opinions of equally delicate independence might be gleaned. Have the defects of two notable players been better hit off than in these lines to Admiral Maxse?: "Very handsome—not a shade of mystery or variableness. The heroine for bold dragoons." That Lily Langtry is meant need hardly be said. "Saw Irving as Romeo. The love play ceases to present a sorrowful story, and becomes a pageant with a quaint figure ranting about." But if category we must choose, the best will be literature, for Meredith's opinions in letters were also convictions in life.

And here note that a much-read man does not dwell on the world's great writers in familiar correspondence. For Meredith's homage to Shakespeare we must go to the poems. In the letters we shall find only the amused confession that in some remote nonage Meredith preferred to read Tennyson. Homer appears merely to rebuke Arthur Meredith for, with Napoleon, daring to prefer Ossian. Nor would the Greek dramatists have appeared in these pages at all had it not been necessary to persuade Lady Ulrica Duncombe, caught by the martial thrum of German verse, that such poetry, after all, is "deficient in great images." So a citation in Greek, from a chorus of Sophocles's "Trachiniæ," to the Sun God

> Whom spangled night, as she dies away,
> Brings forth, and again lulls to sleep.

The single mention will establish both the familiarity and the homage, as does in the case of Milton the statement that he is nearest of all moderns to "the ancient poetical music." I need hardly recall that Meredith's specific tribute to the great comic authors is made in the "Essay on Comedy." Rabelais, Boccaccio, and Montaigne reappear for a moment in the letters as a foil to the decorative "Musery" of Tennyson's "Holy Grail." Dante is the most notable omission, and I cannot think it fortuitous. The concreteness of the Florentine's visions would hardly have atoned for the dogmatically inhuman inflexibility of his closed universe. Wordsworth also apparently did not exist for Meredith. Singularly, few critics are mentioned, though John Morley's books are successively hailed with delight. Renan is praised chiefly as author of the "Life of Jesus," yet "a most delicate irony scarcely discernible from tenderness" is justly remarked. Oddly enough, Meredith seems to have remained insensible to Renan's most gifted successor, Anatole France. For Matthew Arnold there is short shrift. He "was born from the pulpit and occupied it, and might have sermonized for all time, but that he conceived the head of the clerk below to be the sconce of the British public, and that he must drum on it with an iterated phrase perpetually to awaken understanding." The view is partly unfair, and wholly delicious.

---

*Letters of George Meredith. Collected and edited by his Son. In two volumes, with portraits. New York: Charles Scribner's Sons. $4 net.

Among young writers to whom Meredith gave prompt and cordial recognition were Rossetti, James Thomson of "The City of Dreadful Night," Robert Louis Stevenson, J. M. Barrie, and Alice Meynell. Rudyard Kipling's fame seems never to have interested Meredith. Probably he felt that, with the Germans, Kipling was "deficient in great images." Rather oddly, no mention of Henry James as writer is in the letters. Here the accident of neighborhood and friendship may have made correspondence superfluous. One may assume that the consummate comedian in Meredith would have relished "The Ambassadors"; the philosopher might well have rejected as eccentric "What Maisie Knew." Surely, the strangest silence of the letters is concerning Browning. His robust attack and explosive utterance, together with a rich and kindly humor, make him nearest akin to Meredith of all contemporaries. They saw each other familiarly in society, and in many ways they fought the same fight. No two great men of our time seem more clearly designated for a literary comradeship after the Goethe-Schiller model. What kept them apart may have been a mutual distrust of the ardor of their inspiration. John Morley's cool intelligence was much more to Meredith's purpose than any unnecessary reinforcement of his own native exuberance. Besides this, Meredith scorned an optimism based on the chance of repairing the blunders of this world in a world to come. This may have made him resent a reading of life that in a degree was a travesty of his own. Thus the apparent kinship of Browning may have seemed a weakening of his own carefully chosen position, in which case the frequent statement that Meredith himself was a disciple of Browning must have been grievous indeed. Whatever the cause of a defective sympathy, one may be sure that it was grounded in principle. Of the smaller jealousies George Meredith was entirely incapable.

III.

That Meredith was fundamentally a philosopher with a reasoned scheme of life must be clear to any careful reader of the novels. It is interesting to note that in the letters, also, the degree of philosophy is the standard by which greatness is measured, and here Meredith finds himself in accord with Parson Arnold. Fortified by this standard, he resisted the seductiveness of Victor Hugo, to which the entire generation succumbed. Of the ballad "Les Cymbaliers du Roi" Meredith writes: "I do not find any comprehension of human nature, or observation, or sympathy with it. I perceive none of the subtleties, deep but unobtrusive, that show that a mind has travelled. Great windy phrases, and what I must term (for so they hit my sense) encaustic imageries, do not satisfy me any longer." Of "Les Misérables" Meredith's praise was enthusiastic, with the proviso that "it is conceived in pure black and white." Again, after the "Travailleur de la Mer" he wrote of Hugo: "He is the largest son of this mother earth in this time present. Magnificent in conception, unsurpassed—leagues beyond us all—in execution. Not (nur Schade!) a philosopher. There's the pity. With a philosophic brain, as well as his marvellous poetic energy, he would stand in the front rank of glorious men forever."

That a thing should be well grasped intellectually remained for Meredith a cardinal literary virtue. Near the end of his life he writes of Björnson, much as he had written forty years earlier of Hugo: "It would seem that he does not think out his work before he starts. But I can forgive him much for his vigor and raciness." It was this love of structure that made Meredith praise Daudet's great political novel, "Numa Roumestan," while indifferent to the others. The same standard is in mind when Maxse is warned against taking Carlyle's vehemence literally:

> In reading Carlyle, bear in mind that he is a humorist. The insolence offensive to you is part of his humor. He means what he says, but only as far as a humorist can mean what he says. See the difference between him and Emerson, who is, on the contrary, a philosopher. The humorist, notwithstanding, has much truth to back him. Swim on his pages, take his poetry and fine grisly laughter, his manliness together with some splendid teaching. It is a good set-off to the doctrines of what is called the "Empirical School." I don't agree with Carlyle a bit, but I do enjoy him.

His nearest approach to spleen is aroused by Tennyson of "Enoch Arden" and "The Holy Grail." The praises of it "shut me away from my fellows." Yet worse than the satiny diction and rococco saintliness of the book seemed Tennyson's lack of any consistent reading of life. Of Ruskin's enthusiasm for the Laureate, Meredith remarks: "What he says of Tennyson I, too, thought in my boy's days, that is, before I began to think. Tennyson has many spiritual indications, but no philosophy, and philosophy is the palace of thought." In the same letter, as if to prove openmindedness, he adds: "Much of Ruskin's political economy will, I suspect, be stamped as good by posterity. He brings humanity into it." In short, Ruskin's attempt at a comprehensive social synthesis and contempt at the arbitrary definitions of the Empirical School constituted him a philosopher. Again, a remarkable estimate of Thomas Hardy's "Tess"—Meredith profoundly admired his genius—affects consistency of method. "If the author's minute method had been maintained, we should have had a finer book. It is marred by the sudden hurry to round the story. And Tess, out of the arms of Alec, into (I suppose) those of the lily-necked Clare, and on to the black flag waving over her poor body, is a smudge in vapor—she at one time so real to me." But Hardy remained "one of the few men whose work I can read."

Since philosophy was his touchstone, it is no wonder that Meredith was an adorer of the many-sided Goethe. This fealty emerges casually in the letters, and as a matter of course. "If it is *toujours* Goethe, that is because I share the *culte*." This to Lady Ulrica Duncombe. Then, with a most delicate flattery: "Indeed, I fancy I should not have my place with you apart from this alliance. No, I have never written of Goethe. In my younger days Carlyle had the field. He commended the study of Goethe to me constantly. . . . I do worship the splendid statue clothed with wisdom, only I claim the right to smile now and then." Even more precious than such explicit professions is the domestication of Goethe as champion of Diana of the Crossways. Lady Ulrica had made the usual protest against Diana's perfidy, and in the course of an incomparable defence, which cannot even be suggested here, the crowning argument is, "Goethe would have appreciated her."

IV.

It will have occurred to the reader, as it has many times to the writer, that there is an apparent discrepancy between Meredith's loyalty to philosophy and the spontaneously exuberant quality of his own verse and novels. His habits of composition he often confessed were the most irregular. It was a chance whether he came out with one volume or three. His heroes and heroines ran away with him. The great changes which he made in his collected edition indicate dissatisfaction with the fundamental structure of his works. Probably two-thirds of the American adorers of Diana know her only in a truncated version, and have not so much as perceived the mutilation. These are facts with which a critic must reckon seriously. Yet the disorderly element in Meredith is more apparent than real. Mostly an irrepressible wit is concerned—a mind that constantly flashes pertinently and yet askew. It is difficult to follow the path for the incidental illumination. But these are idiosyncrasies in rhetoric rather than defects in structure. And through all the novels runs a common teaching—Meredith would not have blinked the word—of the value of mastered experience and the peril of sentimentally evading life. The sin that temporarily soils, in the long run may fortify and purify. Success is to win through the falls and pitfalls, failure is to decline the hazards or meet them without understanding. Diana and Clara Middleton are examples of Meredithian success, Feverel and Sir Willoughby Patterne of various sorts of failure. The main thing is to live your facts knowingly, paying gallantly the necessary price of experience. Browning's view is much the same, with the essential difference that the harder sporting chances of life may be made up for in eternity. Before we face the worth of this view of life, it may be well to quote a remarkable letter on realism in which much of Meredith's philosophy is implied:

> Realism is the basis of good composition: it implies study, observation, artistic power, and (in those who can do more) humility. Little writers should be realistic. They would at least do solid work. They afflict the world because they will attempt that it is given to none but noble workmen to achieve. A great genius must necessarily employ ideal means, for a vast conception cannot be placed bodily before the eye, and remains to be suggested. Idealism is as an atmosphere whose effects of grandeur are wrought out through a series of illusions, that are illusions to the sense within us only when divorced from the groundwork of the real. Need there be exclusion, the one of the other? The artist is incomplete who does this. Men to whom I bow my head (Shakespeare, Goethe, and, in their way, Molière, Cervantes) are Realists *au fond*. But they have the broad arms of Idealism at command. They give us earth, but it is earth with an atmosphere. One may find as much amusement in a kaleidoscope as in a merely idealistic writer. . . . For my part, I love and cling to earth, as the one piece of God's handiwork which we possess. I admit we can refashion, but of earth must be the material.

Translated into morals, the evident meaning of this passage is that thought is valuable only as it grows out of personal experience. It was the lived quality in Maupassant's stories that won Meredith's approval. Though here he clearly perceived that one can live too much. "A moderated youth would have given him [Maupassant] life. In reality, for a man of his powers, he produced little." And what made Meredith, while admiring, distrustful of Hawthorne was precisely the thin current of life in him. "His deliberate analysis, his undramatic presentations, the sentience rather than the drawings which he gives you of his characters, and the luscious, morbid tone, are all effective. But I think his delineations untrue; their power lies in the intensity of his egotistical perceptions, and are not the perfect view of men and women." Both in direct analysis and literary preference we have seen Meredith's reverence for the unassorted facts of life, and his mistrust of reflection unbased on life itself. We may note that the analysis of Hawthorne explains why there is no hint in the letters of such writers as Walter Pater, Flaubert, Gautier—apostles of the isolated mood, of the thing not lived with but set off and seen. Perhaps the whole of Meredith's philosophy might be found in the scene in which Faust reads "In the beginning was the Word," and finds the saying blind, needing interpretation. Then he tries "In the beginning was the Mind." But is it Mind that works and creates? "In the beginning was the Might." Again too vague. The Earth Spirit at last prompts "In the beginning was the Deed." This, I take it, is the essence of George Meredith's teaching, and it constitutes him the original Pragmatist.

Naturally, it is not incumbent on a reviewer of Meredith's familiar letters to present a critique of pragmatism. Yet it is fair to say that this view of no thought as valid unless personally derived from individual experience, is most questionable, whether in life or in art. Genetically we must accept the axiom "In the beginning was the Deed," but it is doubtful if simple genetic arguments ever go far towards explaining the complicated flux and reflux of thought and deed in a human life. In an experience so usual as religious conversion we must surely reverse the order and return to Faust's "In the beginning was the Mind." Moreover, it is most practically important to know whether the race can learn from history, or the individual from imaginative perception of another's failure in life. Probably rather little is so learned, and yet we must hesitate to deny the validity of such vicarious experience when rightly interpreted. Even Meredith, I presume, would not have had the poet live on the scale of a Byron and Maupassant, and he urged his own son to seek worldly wisdom and polish in the letters of Cicero.

There is probably some exaggeration of the notion of firsthandedness in Meredith, but, after all, it is the onesidedness proper to a drastic limner of life. Properly understood, this counsel to live resolutely and wisely in the whole of life makes both for personal righteousness and a wide charity. As a revolt against a certain idealistic mawkishness in the Tennysonian era, Meredith's flexible materialism was unquestionably serviceable. "I hold that to be rightly materialist," he writes—"to understand and take nature as she is—is to get on the true divine high-road." And it should be said that Meredith's complete fearlessness on questions of sex was ever illuminated by ultimate moral values and entirely devoid of baser curiosity. "Who reads must smell putrid for a month," he writes of one of the nastier books of Catulle Mendès. And he adds with mingled disgust and hopefulness, "Sheer realism, breeder at best of the dung-fly! Yet has that realism been a corrective of the more corruptingly vaporous, with its tickling hints of sensuality. It may serve ultimately in form of coprolite to fatten poor soil for better produce." Perhaps the essence of Meredith—his counsel of a control of life, alert and resolute, yet not too anxiously intellectual—may best be suggested in two stanzas of his favorite poem, Goethe's "Das Göttliche." "I have many times come in contact with it and been ennobled," he writes to John Morley. "This is the hymn for men. . . . All other prophecy is insolence:

'Tis only man
May work the impossible,
He the distinguisher,
Chooses and judges.
He to the moment
Duration may lend.

He alone may
Guerdon the good,
Punish the evil,
Healing and saving;
Erring and random things
Binding to use."

FRANK JEWETT MATHER, JR.

NEWS FOR BIBLIOPHILES.

I have just found two overlooked references to the movements in 1597 of "Lord Harbert"—as Rowland Whyte, good, garrulous newsman, always calls the eldest son of the second Earl of Pembroke in his Letters to Sir Robert Sydney, younger brother of the famous Sir Philip Sydney and maternal uncle of "Lord Harbert." It is in Whyte's Letters that I have found these two overlooked references, along with several others of minor importance.

The first tends point-blank against the

theory that Herbert was Shakespeare's friend, because it locates the young nobleman in Holland in the spring of 1598. The passage runs thus: "I . . . heare that my Lord *Harbert* the next Spring shall come to *Leiden*. . . . *Strand*, this *Wednesday* the 27 of *Aprill*, 1597." ("Letters and Memorials of State . . . written and collected by Sir Henry Sydney . . . Sir Philip Sydney . . . and . . . Sir Robert Sydney . . . Transcribed from the originals . . . By Arthur Collins . . . 1746." Vol. II, p. 46.)

It will be remembered that hitherto, in order to place Lord Herbert in London as early as 1598, so that he and the poet could meet there, dependence has been put upon an earlier reference made by Whyte in these same Letters, namely: "My Lord *Harbert* hath with much a doe brought his Father to consent that he may live at *London* yet not before the next Spring" (p. 43). This is dated Monday, the 19th of April, 1597.

It now appears from Whyte's next letter, eight days later, that he corrects his earlier report by this emphatically worded "Shall come to *Leiden*."

We know that the University at Leiden was of the first eminence in the sixteenth century. The strongly Protestant predilections of the Sydneys and Pembrokes agree well, too, with a determination of the parents of this restive young nobleman of seventeen to send him to the great Dutch University.

This reference was overlooked by Lodge in the summary in his "Portraits" (1821, Vol. II) of the Life of the Third Earl of Pembroke. This Life is one of the first, if not the first, of the more modern accounts (since Aubrey's, Wood's, and Clarendon's), and is still in some respects the best. Lodge quotes the since often-cited Letter of April 19, and then adds: "We do not heare that he travelled." Evidently in the absence of evidence of travel, such as the Letter of April 27 now supplies, Lodge draws the inference—"he came accordingly about that time to London."

Mr. Thomas Tyler's edition of the "Sonnets" (1890), made by him a special argument to identify Herbert with "Mr. W. H.," is virtually based upon this inference. Mr. Tyler takes it as fact, and Dr. Sidney Lee accepted it in his Life of Herbert in the Dictionary of National Biography. Although Dr. Lee has since become an opponent of the Pembroke theory, he has left the evidence in question undisturbed in the Appendix on Shakespeare and Pembroke in his "Life of Shakespeare" and in his later editions of the "Sonnets" (1905, 1908). Mr. George Wyndham, in his admirable edition of the "Poems" (1898), giving a specially full recapitulation of passages in Whyte's Letters bearing on Herbert, has not hit upon the overlooked reference. In verifying the citations of my predecessors in the spring of 1911 for my own notes on the "Sonnets"—the final volume published this October, of the "First Folio Edition of Shakespeare"—it escaped me, as I suppose it has escaped others, because, as it happens, this citation is not in the Index. I come upon it, now, in reading the Sydney Letters with special care for some present work on the "Sonnets."

The second overlooked reference is rather surprising, too, for it brings Lord Herbert to London earlier than any Herbertist has yet ventured to do. It runs as follows:

> I understand that 9000 comes to end the Matter you wrote of; in some Sorte I am glad you are not heare for then must you of Necessity have bene a Meddler and a Dealer in yt. At 9000 Arrivall I will earnestly stand upon yt to have something done for you. To have your leave to be a counsailor; to be a Baron is the Thing that shall be desired by me; if they will hearken unto yt. I see that 900 receaves, as he hath just cause, great Contentment by yt. . . . *Strand* this *Monday* the 13th of October 1597. (Pp. 66-67.)

This is the first time Whyte speaks of Lord Herbert under the cipher "9000," which he uses for him repeatedly later. Occasionally he changes the ciphers from one man to another, but I find no reason to suppose any change in "9000." Under "900" he refers to Lord Buckhurst, the Lord Treasurer. The context shows in general, as in this particular extract it also suggests, that Herbert's uncle, Sir Robert Sydney, in the performance of his duties as Governor of Flushing was, like his father, Sir Henry, always in money embarrassments with the exacting Queen, and fretting for leave to come away from the Netherlands to England, hoping there to enjoy a less onerous office and a higher rank and title. The wealthy Lord President of Wales, the Earl of Pembroke, Sir Robert's kinsman by marriage with his sister Mary, was always called upon to back him. In particular the countess herself and their eldest son, Lord Herbert, are perpetually engaged, if we are to trust Whyte, in doing something at court and being manœuvred into doing more for the Governor of Flushing. But this is the first mention I have found of young Lord Herbert's dutiful offices.

His visit appears to have been a transient one, for Sir Robert's leave to come to England, then being urged, hung fire until March, 1598. Whyte's letters about it, meanwhile, are constant, and although repeated letters from the Earl and his wife to the Queen are sent up by "Mr. Massinger," there is no other mention of "9000" as envoy or courtier. Whether he may then have been on his way via Flushing to Leiden, who can say?

In July of 1599, however, it appears from a letter to Sir William Browne from the Leaguer that Lord Herbert's father was lieutenant of horse in the English camp before "Bommell," about twenty miles from Leiden. Mention of the Earl as back in England occurs, moreover, again with reference to the English cavalry in the same letter of Whyte's to Sir Robert, dated August 4, 1599, which has hitherto been depended upon by all Herbertists as furnishing the first mention of Lord Herbert in London:

> Lettres are sent, I heare, to my Lord Pembroke [and others] to provide presently 100 Horse a Peece . . . and to send them up for her Majesties Gard. (P. 112.)

At the close of this letter occurs the often quoted passage proving the son's presence in London:

> My Lord Harbert means to follow the Camp and bids me write unto you that if your self come not over [from Flushing] he meanes to make bold with you and send to *Pennshurst* for *Bayleigh* [his Uncle Robert's horse] to serve upon, etc. (P. 113.)

These additional references, taken together, suggest to me that the earl, being overpersuaded early in April of 1597 to let his son go to London "next spring," concocted a scheme to take him to a "safe" Dutch university instead. In order to cross to Leiden or to go to his uncle in Flushing the young lord might pass through London and be employed in the family affairs on behalf of Sir Robert. Perhaps at Flushing as well as at Leiden, perhaps in camp with his father or joining him for the return to England—but, at any rate, in Leiden, the present evidence shows that Lord Herbert must be located, in 1598, and, so far as known, until about August 4, 1599.

His absence from England agrees, too, with his father's plans for him at this time. They are shown in the Earl's letter of Sept. 3, 1597, to Lord Burleigh, a letter now in the Record Office and first cited by the Rev. W. A. Harrison. It concerns a projected marriage contract of Lord Herbert with an immature girl of thirteen—Lady Bridget Vere. The stiff governing hand of the old Earl is betrayed in passing: "after the marriage is solemnized & my sonne gonne to travell."

I scarcely need add, since these are the facts, that an intimate friendship between Shakespeare and Herbert can no longer be assumed to occur until the middle of 1599. The main biographical event of the "Sonnets" is, of course, the tragic break in the happiness of the poet in the love of his friend due to the friend's confessed "sensuall fault" with the woman whom the poet had loved. Since Meres mentioned "Shakespeares Sonnets," in 1598, and Jaggard published in 1599 two of them (138, 144) which unequivocally refer to this main biographical event, neither can it any longer be assumed that this event occurred with relation to Lord Herbert as Shakespeare's friend.

CHARLOTTE PORTER.

Correspondence

PROF. HART ON THE SOUTHERN VOTE.

TO THE EDITOR OF THE NATION:

SIR: Anybody who guesses on elections is subject to rude awakenings and unwelcome comment; and I do not complain that the *Nation* entertains unfavorable views both of the result of the recent Presidential contest and of an analysis of those returns which I made in the New York *Times* of November 10. In fact, when a kind but unknown friend sent me the clippings from your issue of November 14, I was for a moment overwhelmed with a sense of the blunder that I must have made—so strong is still the terror of the *Nation* upon ordinary mortals. I was afraid that the umpire had at last caught me playing offside. It is therefore a cause both for astonishment and for relief to discover that the statements which you so derisively criticise are true, or as near true as was possible with the incomplete returns then available.

The statement which you most contemn is: "The scanty returns show Roosevelt votes in every Southern State, with a total of between 500,000 and 600,000. That is a splendid start in the South, but the greater part of that vote cannot be had by the Republican party." You seem to have difficulty in understanding what is meant by "the South"; but I cannot admit that your private definition of the South as "eleven

States" is binding either on the geographer or on the analyzer of Presidential votes. Two useful maxims of law are, that words are to be taken in their ordinary sense; and that a construction which reconciles two statements is to be taken in preference to a construction which makes one of them absurd. One would think that a paragraph writer might discover from my totals that I was dealing with fifteen States instead of eleven. I will acknowledge one general statement which is not mistaken, but is really less favorable to my contention than my figures warranted. The total Roosevelt votes in fifteen Southern States (including West Virginia, but not Delaware) was not "between 500,000 and 600,000," but stood at 610,000 when my statement was made up. That is a splendid start for a new party.

The following table makes the conditions clear:

Southern votes (in thousands):

	Taft, 1908.	Taft, 1912.	Roosevelt, 1912.
1 Alabama	25	8	18
2 Arkansas	57	30	37
3 Florida	11	7	8
4 Georgia	42	6	22
5 Louisiana	9	5	15
6 Mississippi	4	3	5
7 North Carolina	115	30	60
8 South Carolina	4	1	3
9 Tennessee	118	55	38
10 Texas	66	36	19
11 Virginia	53	21	46
	504	202	271
12 Kentucky	236	110	100
13 Maryland	117	53	58
14 Missouri	347	193	128
15 West Virginia....	138	25	53
	1,342	583	610

You scoff at my statement that the "greater part of that vote cannot be had by the Republican party." Good heavens, if it *could* be had, why was it not had in the last election when it was so much desired? Why did the Taft vote, which, in the fifteen Southern States, was 1,342,000 in 1908, sink to 583,000 votes in 1912? What you call in your editorial "so gross a blunder—due to no arithmetical slip," is an exact, truthful, and accurate statement, upon which the opponents of the Progressive party may dwell profitably. The Republican party lost 750,000 votes in the South from 1908 to 1912. The Progressives came up from nothing to 610,000. How many of that 610,000 votes will ever be had by the Republican party?

So, with reference to my statement that in Texas the Progressive "choice of delegates [to Chicago] corresponded to the strength of the Roosevelt forces as against the Taft forces." The Taft vote in Texas in the election of 1908 was 66,000; in 1912 it was 36,000, and the Roosevelt vote was 33,000. Probably Roosevelt got some Democratic votes—on the other hand, some of the Taft votes of 1908 were not cast at all in 1912. It is a valid inference that there were more Roosevelt voters behind the Roosevelt delegates and contestants than Taft voters behind the Taft delegates to Chicago from Texas last spring.

It is not so demonstrable, but it is a reasonable inference, that the *Nation* is so hurt and disappointed at the leap of the Progressive party to the second place, presaging the downfall of the Republican party, that it can no longer see straight or write straight. I am perfectly familiar with your little habit of tying a can of nitroglycerine to the end of letters of protest such as this; and have no doubt that you will find new grounds for posting the writer as a fool; but I cheerfully leave it to the umpire—that is, to the reading public—to decide which has been guilty of offside play in this controversy.

ALBERT BUSHNELL HART.

Cambridge, November 26.

[The passage referring to the Southern vote, in Professor Hart's letter to the *Times*, was as follows:

> Up to last June the Republican organization still had the opportunity to appear a second time as the protagonist of great moral ideas; to appeal to the justice of the nation; to rouse the young voter. It could have succeeded in 1912 on that basis, but it could not succeed indefinitely because the name Republican repels the voters in the South who would otherwise act with Northern brethren. The scanty returns show Roosevelt votes in every Southern State, with a total of between 500,000 and 600,000. That is a splendid start in the South, but the greater part of that vote cannot be had by the Republican party.

It seemed plain that the Southern States here intended were that group of States, south of the border States and usually referred to as the Solid South, in which the Republican party has hitherto been a hopeless minority; the purport of the passage seemed clearly to be that the 500,000 or 600,000 Roosevelt votes represented something new and peculiar in the region referred to—votes which had previously been unattainable by the Republican party. Kentucky, Maryland, Missouri, and West Virginia, which it now appears that Professor Hart meant to include, are of a wholly different character from the eleven States of the Solid South. In each one of these four States, the vote has for many years been pretty evenly divided between Republicans and Democrats. Kentucky went Republican in the Presidential election of 1896, Maryland in 1896 and 1900, Missouri in 1904 and 1908, and West Virginia was carried by the Republicans in the four consecutive Presidential elections of 1896, 1900, 1904, and 1908. And neither in these four States, nor in the other eleven, was a "splendid start" made by Roosevelt in any other sense than that in which he made a splendid start in all the other sections of the country—*i. e.*, the division of the Republican vote. Whether we take the eleven States, the four States, or the fifteen States, we find the sum of the Taft and Roosevelt votes in 1912 materially less than the Taft vote in 1908.—ED. NATION.]

VERSE TRANSLATIONS IN THE LOEB CLASSICS.

TO THE EDITOR OF THE NATION:

SIR: I should like to add my emphatic protest to that of your correspondent against the use of verse translations in the Loeb edition of classical writers. That edition will be used, I suppose, mainly by general readers like myself, who make no pretension to classical scholarship, but have endeavored to keep up their acquaintance with the original text of the Greek and Latin writers, believing that few things in life are better worth while. Such readers wish to avoid the drudgery of a lexicon, not only because it is drudgery, but because it tends to destroy the current of pleasure which comes from the swift following of the text itself. All that is required is to be able to turn from a difficult passage and by a momentary glance to catch the word or phrase that affords the solution. It is for this purpose solely, as I understand it, that the Loeb editions are issued, and for this purpose a verse translation, that is, one which necessarily distorts the literal meaning to an extreme degree, is most unsatisfactory. The barest, baldest prose, clinging close to the word-for-word sense, is far more useful. Indeed, any attempt at independent effects of style is objectionable, as distracting the attention unduly from the sole point of real interest, the original.

I sincerely trust that in dealing with Sophocles, Æschylus, and Pindar the verse method will be abandoned.

GAMALIEL BRADFORD, JR.

Wellesley Hills, Mass., November 23.

TO THE EDITOR OF THE NATION:

SIR: In comment on the letter of Elizabeth Knights Tompkins anent the Loeb Library, will it be of interest to record the impression of one who, having read his Greek authors for twenty-five years in the original, feels justified in saying that he does not need the translation? His regret is that so fine a work as Lang, Leaf and Myer's "Iliad" was not in verse; he experiences a keen pleasure in reading Mrs. Browning's versified renderings of the choral odes of the "Prometheus"; Pollard's "Odes from the Greek Dramatists" is a source of constant joy to him; and he has found, in his classroom, that the translation in verse invariably carries the day with an average class of American young men and women. So that he for one hopes for more verse translations in the Loeb Library. It seems a pity indeed that in translating the works of the Greek genius, one of its most essential qualities, that of plastic form, should be omitted.

CHARLES ST. CLAIR WADE.

Tufts College, November 22.

ART IN EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: Your notice (November 21) of the pamphlet published by the Princeton University Press on "The Study of the History of Art in the Colleges and Universities of the United States" calls attention to the fact that less than one-quarter of our colleges give courses in the history of art, while barely more than one-sixth have a special professor in the subject. Great as is the improvement shown even by this state of affairs over that which existed ten years ago, the fact remains that the history of art is a subject regarded as unimportant in the academic world of the United States. This is a comment on American college and university ideals of culture not pleasant to face. One wonders what the reason may be.

Is it that three-quarters of our colleges have presidents and faculties, regents and trustees, so obsessed with the notion of advancing only those subjects which lead to what may be called profitable utilities that they have lost faith, if they ever had it, in culture as an end in itself, not to say a vital power in society? In this opening of the twentieth century, when our institutions of higher education are giving their strength and resources so undividedly to the making of chemists, botanists, zoölogists, school teachers, journalists, and cooks, the fruits of science and pedagogy, there is of course little room left in the curriculum, and small funds in the exchequer, for teaching and investigating subjects which relate to "the mysterious forces of the spirit"—art, music, poetry.

The answer to this difficulty is easy. Start with a good man, and give him what you can for equipment. If he is a really good man, he can instruct and delight his students, broadening their intellectual and æsthetic horizons, quite apart from any great collection of photographs, lantern-slides, and casts. Nothing is more dangerous than too much equipment, since the history of art courses may easily become picture-gazing "snaps" for the student, and lecturing "snaps" for the professor, everything being called into service but brains. The point is that a small equipment need not cost much, and that a small equipment is plenty to start with. Because we may not be able to command a library of one hundred thousand volumes, it by no means follows that we cannot learn much from one hundred. It is so with the possible equipment of courses in the history of art. Surely it is not the expense that keeps these three hundred out of four hundred American colleges from giving such courses. No man ever did so much in this country to vitalize and keep alive an interest in the history and meaning of art as Professor Norton, and it is doubtful if any man ever had a smaller equipment than he for years and years.

ALFRED M. BROOKS.

University of Indiana, November 29.

Literature

HOLIDAY BOOKS.

One will look far for a choicer gift-book than "Boston, New and Old" (Houghton Mifflin; $7.50 net). The drawings, by Lester G. Hornby, include all the fine old bits, as well as the new and imposing, and reveal that artistic sense which last year made his drawings of New York much more than a play of surfaces. To Bostonians, his present work should bring delight, for, without in any way disguising his subject, he has seized upon the things which residents of Boston like to think make it different from the rest of the world. Mr. T. R. Sullivan explains brightly and briefly the changes which have come over the city with the years, together with the customs which have remained the same. Frequenters of the Park Street corner will be comforted to learn that it was ever breezy. Legend has it that, when the Wind and the Devil first came to this locality, the Devil entered the Park Street Church, while the Wind waited for him outside. Now, that house of worship cast such a spell over the evil one that he never could escape. And the Wind still waits. There are amusing pages on the relations of street-car conductors with best families. The former, blessed creatures, maintain, we are told, a Bostonese purity of speech. "Leave by the *nearer* door," calls the conductor, never forgetting himself. While on the subject, the author relates the story of a New York conductor, "who goaded forward a stately, high-souled dame by his coarse shout of 'Step liveiy, lady!' She, more than equal to the occasion, with a scathing look, replied, 'I have no wish to linger,' and swept him by."

By the side of this volume on Boston may be placed F. Hopkinson Smith's "Charcoals of New and Old New York" (Doubleday, Page; $5 net). For each of his illustrations Mr. Smith has provided a page or two of text, written in a personal, impressionistic vein. He does not like the skyscraper:

> The vertical straight line is the line of the ugly. The rectangular is two of these lines conspiring to strangle beauty. . . . How New York will look when the rest of our streets are lined with this "dry-goods-box-set-up-on-end" style of architecture with fronts but so many underdone waffles, is a thought that disturbs.

But New York is not yet made up of skyscrapers alone (which, for the matter of that, may have the qualities of grandeur if not of beauty), and Mr. Smith has made a series of drawings soft and romantic enough to soothe any eye.

George Wharton Edwards continues to make grateful return for the spell which the Netherlands have cast over him on several visits. Last year his "Some Old Flemish Towns" was one of the choice books of the season, and this year "Marken and its People" (Moffat, Yard; $2.50 net) equally sustains his reputation as a pleasant writer and illustrator. The cover, frontispiece, and title-page have the elaborate design and color-scheme with which Mr. Edwards has come to be identified. Within the volume the illustrations are simpler and are uniformly in an effective slaty gray, being based on pencil sketches. The Marken described in the text is only geographically that to which tourists throng. For the author has made his visits usually out of the summer season—once he spent Christmas there, going across the Zuyder Zee on a sledge—and has caught the people out of that mood of manufactured gayety which has begun to pall even on sightseers. One of the peculiar customs of the island may be noted here. Before two persons are properly engaged to each other they must go through the ordeal of sitting up throughout the whole night with a long, guttering, lighted candle on the table between them. They are left by parents entirely to themselves, and they may not speak until the taper has burnt itself out, the idea being, as Mr. Edwards asserts, that they must be very much in love or they could not endure the night's vigil.

If only for the illustrations, "Japanese Gardens" (Dodd, Mead; $6 net) should be a book much sought after. Something above two dozen plates, reproduced from water colors by Walter Tyndale, R. I., follow the Japanese season, and set forth the choicest spots in that flowery land. Judgments will differ as to how far Mr. Tyndale has caught the Oriental atmosphere. In certain instances there can be no doubt that he has succeeded; in others, in his preoccupation to produce vagueness of general effect, he has sacrificed the definite lines of detail, which are almost invariably a part of the Japanese method. In consequence, some of the scenes might with equal fitness be labelled "Off Rockland" or "A Boston Suburb." Certain figures also have the unbecoming alertness of Americans, others look like Germans. Yet the pictures, almost without exception, are beautiful enough to frame. The author of the text, Mrs. Basil Taylor (Harriet Osgood), insists that her words are, as it were, but the tail to Mr. Tyndale's "soaring and many-coloured kite." But to her own first-hand knowledge, she has added investigation in the authorities on the subject, and has produced a book of formidable compass.

Whether the verse or the drawings of Oliver Herford's "Mythological Zoo" yield the greater diversion, readers will have a chance to decide from the edition which is issued for the Christmas season. The cover decoration is most attractive, being no other than the Mermaid in tints of pink and blue and dreaming of Marcel Waves. (Scribner; 75 cents net.)

Handasyde's (pseudonym for Emily H. Buchanan) "The Four Gardens" ($1.50 net), consisting of the Haunted Garden, the Old-Fashioned Garden, the Poor Man's Garden, and the Rich Man's Garden, which Lippincott has just published handsomely, offered the illustrator an excellent chance for variety. Charles Robinson, to whom this work was entrusted, has produced marginal designs and figure-sketches in black-and-white and a number of full pages in color. His results, though generally pleasant, are not unusual, and are not altogether free from stiffness and conventional arrangement.

Miss Agnes Repplier's love for "the fireside sphinx" is well known, and there will be a welcome for her book on "The Cat" (Sturgis & Walton; $1 net). It is an anthology which the collector describes on the title-page as "a record of the endearments and invectives lavished by many writers upon an animal much loved and much abhorred." Not exactly an endearment, but certainly an encomium, is this characteristic stanza from the French of Jules Lemaître:

Philosopher and comrade, not for thee
The fond and foolish love which binds the dog;
Only a quiet sympathy which sees
Through all my faults, and hears with them awhile.
Be lenient still, and have some faith in me,
Gentlest of skeptics, sleepiest of friends.

"Romeo and Juliet" is the play of Shakespeare's chosen this season for handsome decoration. It is published by Doran ($5 net) in a form approaching the folio size, with numerous full-page colored plates by W. Hatherell, R. I. The cover is green, with large gilt lettering, and with the balcony scene outlined in the same medium. That great pains have been spent upon the color work there can be no question. But the reader will have to get used to it by degrees, because of the bright Italian hues employed. Many of the effects are beautiful; others, to the present reviewer at least, still seem garish after looking at them repeatedly.

John Hay's "Pike County Ballads" furnish an illustrator with innumerable graphic situations, and there is indeed good measure in the work of N. C. Wyeth, who has decorated the book for the present season. In addition to several full-page colored drawings, tail pieces and marginal devices in black-and-white are to be found in nearly every available space. (Houghton Mifflin; $1.50 net.)

Gustave Baumann's round dozen of woodcuts in illustration of James Whitcomb Riley's "All the Year Round" (Bobbs-Merrill, $2.50 net) attempt the broad effects of those quaint sixteenth century blocks which we associate with the first history of printing. Perhaps the solid masses of color suffer from being expanded to quarto-page size. He is more successful with his landscape than with his people. The plate for the first month in the year goes well with Riley's

Bleak January! Cold as fate,
And ever colder, ever keener—
Our very hair cut while we wait
By winds that clip it ever cleaner;
Cold as a miser's buried gold,
Or nether deeps of old tradition—
Jeems January! you're a cold
Proposition!

W. H. Koebel has written the text for A. S. Forrest's seventy-five colored pictures about "South America" (Macmillan; $5 net). Without being heavy the narrative is a little more ambitious than the average story in books of this character. Mr. Forrest has seen South America chiefly in Merejk, greens and brick reds, with now and then a pleasant town of white and scarlet on the border of a green sea. The Indian types are bold, with no evidence of the prettifying touch.

Merejkowski's panoramic "Romance of Leonardo da Vinci," in Herbert Trench's authorized translation, has had ten years of popularity, and now appears in what may be called a jubilee edition—two volumes profusely illustrated from contemporary sources. (Putnam; $1.50.).

Five small books in limp leather from Funk & Wagnalls (75 cents net each) bring "The Misfortunes of a World Without Plan," by Newell Dwight Hillis; "The Conservation of Womanhood and Childhood," by Theodore Roosevelt; "The Signs of the Times," by William Jennings Bryan; "The Latent Energies of Life," by Charles Reynolds Brown, and "The Call of Jesus to Joy," by William Elliot Griffis.

A new holiday edition of Rudyard Kipling's "Kim" comes to us from Doubleday, Page ($3.50 net). The book is adequately illustrated from the designs by J. Lockwood Kipling. The format is pleasing, the type clear and large, and the pages are amply margined. The volume can be commended as a handsome gift.

Averil Burleigh has drawn twenty-four pictures in color for the volume of Keats issued by Little, Brown ($1.25 net), in a quiet dress of green linen, with a touch of gold. Mr. Burleigh's Grecian backgrounds are pleasing in line and color, but his classic maidens are at times overpoweringly English in the tall, hollow-eyed manner of Du Maurier. Much more successful is his modern "Meg Merrilies."

Of a religious character in the broader sense of the word is "The Illumined Life," by Helen Van Anderson-Gordon. This is a work of introspection and spiritual meditation, written with delicacy of feeling and sincerity of purpose. It is decorated by Ralph Fletcher Seymour. (McClurg; $1.25 net.)

THE TRUST PROBLEM.

The Control of Trusts. By John Bates Clark and John Maurice Clark. New York: The Macmillan Co. $1 net.

Some who read this book will find themselves wondering if the authors have sufficiently pondered Petrarch's ejaculation, "Believe me, it requires no little confidence to promise help to the struggling, counsel to the doubtful, light to the blind, hope to the despondent, refreshment to the weary. These indeed are great things if they be accomplished; trifles if they exist but in a promise." Confidence is certainly not lacking here. Though Professor Clark has apparently had to modify his views in no inconsiderable measure since the first edition of this work was issued in 1901, he has now no hesitation in uttering what, in its main content, may be regarded as his definite philosophy of Trusts.

It is a philosophy that will not pass unchallenged. And it may be said that our authors have, by their choice of terms, made it hard rather than easy for those who have honestly differed with them in the past to come round to their way of thinking. This work, indeed, has one grave defect: it is too often couched in the terms of the agitator. Invidious distinctions meet the eye at every turn. "Honest capital" and "honest labor" are everywhere in favor of the free competitive system. If the monopolistic power cannot be taken away from great corporations, "we must treat them as outlaws." "When there is a large public to plunder, the gains are great." It is assumed that the Trusts create their products with a maximum of economy, "but cheat the people out of their fair share of the gains therefrom. This does, in fact, describe what within the short period of their existence they have done; and yet, if they should become secure monopolies, they would do something much worse." Instances of such language could be multiplied indefinitely. If this book were put forth as a manual for those about to go on the hustings, it would serve the purpose admirably. It has, in fact, not a little resemblance to the literature so constantly flooding the market in Great Britain in periods of political stress. Nothing could be more regrettable. For if there is any one question in the mind of the people of the United States that calls for absolutely dispassionate discussion it is the question of the Trusts.

All this, however, does not alter the fact that here is a very readable and suggestive book. Ten years ago Professor Clark entertained the notion that *potential* competition had shown its power to control prices. Whenever mills in a combination had raised their prices greatly, they had caused new mills to be built, and the fear of further cases of this kind was holding prices within bounds. But the limits thus established were not rigid, declare our authors, and the companies soon discovered their own power to crush audacious rivals when they appeared. They so often did this that their evident power to do it had its effect in advance and deterred competitors from appearing. The potentiality of unfair attacks by the Trust tended to destroy the potentiality of competition. Under these conditions it was and is necessary to disarm the Trusts—to deprive them of the special weapons with which they deal their unfair blows. The failure of potential competition accounts for the appearance of the work before us.

Almost at the start we are forced to inquire if the writers of this book have properly correlated the Trusts with their times. Great prosperity, they assert, has certainly come under a régime of consolidation. The period since 1891, they add, has been anything but one of impoverishment, and it is no uncertain guess which assigns a reason for this general prosperity. It has been due, in their judgment, to "production on a vast scale, carrying with it a corresponding increase of efficiency, and to improvement in productive methods." We are led to infer that Professor Clark and Mr. John Maurice Clark rank the Trust as a cause of the great industrial prosperity of recent times. For they declare that we need more, better, and again better means of production if our growing population shall be kept above the level of want; and then they add: "Now what has happened within a third of a century has been such a multiplying and improving of instruments of production, and, secondly, the utilizing of them on a vast scale. Big mills where little ones stood, and groups of big mills under one management, have added enormously to the productiveness of machinery."

The facts are open to another interpretation. In the minds of many the Trust is more distinctly an effect than a cause. That is, it did not come into existence for the purpose of initiating and moulding a new industrial development, but was forced into being to escape from the consequences of a rising tide of competition created by a new industrial development.

From 1873 to 1898 was a period of falling prices. Sir Francis Webster has recently pointed out some of the reasons for this. There was an absence of great wars; transportation facilities were being increased and improved on an enormous scale; goods, whether raw or manufactured, kept pouring into the market at a pace that baffled previous experience. One crop came on top of another before it could be absorbed. The glut was universal. Then followed a period of unproductive consumption of wealth. Capital was destroyed in prodigious amounts by war and armaments. The world's consumption from these and other causes gradually overtook the years of plenty before 1900. To quote Sir Francis Webster, the world is now working and living on relatively, and in some cases on actually, smaller stocks, and more from hand-to-mouth, than at any time in the experience of a generation.

During the years of plenty and low prices, which were often years of small profits, the incentive for new capital to enter into competition with old was reduced, even though the new capital could take advantage of all the latest improvements in the arts. About fifteen years ago began an astonishing era of industrial combinations, the purpose being chiefly one of self-preservation. Opportunely, just as industry was forced to such expedients, a reign of militarism set in, which, combined with other forms of unproductive consumption the world over, turned glut into scarcity, and opened the way for enormous profits, not only for capital already invested in production, but also for huge amounts of new capital. In view of these well-recollected facts, there seems to be scant warrant for the assertion that great general prosperity has come "under a régime of consolidation." The most that can be said is that the Trusts and prosperity have been synchronous.

It is well to dwell on this point, because, as unprofitable years made the Trusts, it is barely possible that eventually they may unmake the Trusts. Certainly, there would be hope of this under free competition. But free competition has been lost, declare the authors of the present work, and can only be regained through legislation. It must be admitted that they have much to say for this contention. A Trust can follow a newcomer into its field and undersell it, while keeping up prices everywhere else in its own field; it may boycott merchants who do not comply with its regulations; and it may discriminate in other ways to the destruction of free competition. Whether the alleged practices of the Trust could be employed successfully to the end of time is at least debatable. But the world of affairs is not very much concerned with remote contingencies. The capitalists that desire to compete with the big corporations in the present, and the public that desires to profit from such competition, must, in the opinion of our authors, invoke the law.

How shall they do it? We find here an interesting chapter on how not to do it. Among the inadvisable measures are government ownership of industrial plants and indiscriminate tariff legislation. The constructive programme of Professor Clark and his collaborator is not simple. Incidentally, these reformers disclaim any desire to dogmatize as to the legal methods by which their aims should be brought about. Many of their readers will be likely to regard this as a fatal weakness in their book. If they are able to show us a sure path out of the present situation, their guidance will be welcomed; if they are not able, their work is of no more practical value than many another's.

The first thing demanded here is that our control over transportation shall be so developed as to prevent all favoritism of the kind that leads, or may lead, to giving the favored shipper a monopoly. Next, we must have an administrative commission, like the Interstate Commerce Commission, to deal with the specific and general provisions of our laws regulating Trusts. The investor in Trust securities must be protected; predatory competition and misuse of patents must be prevented; combinations must not be allowed to attain a size that will preclude competition, and if they do they must be broken up. The central feature of the programme here outlined, and the feature which our authors are quick to recognize as the one most visionary, is the control of methods of marketing, and the enforced selling at one price publicly advertised.

The reader will begin this book with more assurance than he will possess at the close. Almost the first words that will strike his eye are these:

> The purpose of the work is entirely constructive, since it advocates a positive policy for controlling Trusts. It aims to show that certain measures having this end in view are in harmony with modern tendencies and are well within the power of the legislator and the executive official, and that they give promise of ensuring what the public needs, namely, protection against abnormal prices, continued increase in production, and improvement in conditions of labor.

This note of confidence emboldens the mind of the reader, but as he goes on to the end he finds himself less sanguine. He may even find himself asking if the remedy is not worse than the complaint. This able treatise has not simplified the Trust problem: it has, if anything, made it seem more difficult than before.

CURRENT FICTION.

The Flaw in the Crystal. By May Sinclair. New York: E. P. Dutton & Co.

Never before has Miss Sinclair had a theme to which her manner was so congenial. As long as she dealt with the invalid *précieuse* and the poetic clerk, with the wife who kept vestal vows, and with the women who had books rather than babies, we could never quite trust her. It would have been our humble choice to examine these anomalies in a more matter-of-fact light, and with less palpitating solicitude. We mistrusted her air of admitting us to the mysteries, her sentences that had the cadence of incantation.

But what she offers us now is an amazing adventure—nothing less than an excursion into the occult. This is a field where most of us will never penetrate without a guide, and who better than the priestess of the immaterial? There is need of some charm "of woven paces and of waving hands" to lull our natural doubts into oblivion, if we are to be admitted to the rites of mental therapeutics. It is really wonderful how she does it—contriving to slip the bonds of reason and audaciously projecting us beyond the limits of the natural into the arena of psychical forces. The experience is like trusting yourself to a new element—participating in a psychological conquest analogous to aerial navigation. It is this sense of experimental venturesomeness amid uncharted dangers that gives the adventure its zest. The theme is, in its final analysis, asceticism—the old truth that selflessness is the absolute condition of doing good; what is unusual is the exploitation of this particular way of doing good—its hazards and what we may call its technique.

Agatha Verrall discovers herself in possession of a remedial influence which she is able to direct at will, and extends its beneficent use from her own case of erotic *malaise* to the marital sufferings of her lover. The reciprocal affliction of lacerated nerves from which Rodney Lanyon and his wife suffer being healed, the need of the former to resort to Agatha's sympathetic presence is lessened. As his visits become rarer, she begins to suffer for her disinterested benevolence. Nevertheless, she is still maintaining these cures successfully, when she is led to undertake another, a case of insane mania in the husband of an appealing friend. Under the triple burden she succumbs. Like a swimmer in the desperate grip of a drowning man, she has no choice except to save herself mercilessly. In self-defence against the inroads of vicarious madness she decisively casts off the demented subject; and by a sacrificial purification of her intention, she relinquishes her personal claim upon Rodney in order to restore the beneficent operation of her "gift" towards him. It had been the "strain of mortality in her love for Rodney" that had made her vulnerable to the spiritual contagion.

"The Flaw in the Crystal," it might be noted, is not a novel, but a very perfectly developed short story. Not too long to read at a single sitting, it presupposes such a perusal. Piecemeal it loses its effectiveness. The pleasure is in watching it grow like a blown bubble, an effect as magical, insubstantial, and quick to vanish at a maladroit touch. Altogether, this is the most original thing Miss Sinclair has done and the most unassailable from an artistic standpoint.

The Soddy. By Sarah Comstock. New York: Doubleday, Page & Co.

A stretch of prairie cursed by drought, upon which a group of forlorn settlers have made vain attempt, year after year, to harvest crops from a naturally fertile soil. A young Easterner, full of enthusiasm, confident of success with his new claim. A young girl (beautiful), daughter of a settler who has died, leaving her a young family to care for. A villanous promoter and his rascally tool, who is in love with the heroine. Settlers of various stages of unintelligence about to be lured to equally unpromising lands by the promoter. A doctor, a circuit-riding parson. The "soddy," or sod-house, which the young Easterner has begun to build upon a scale attesting his faith in the country. These are the materials of which the story-teller constructs her tale. That there is trouble ahead for the Easterner and the girl is evident on the face of things. But the kind of trouble is unexpected. For the enthusiast, who is so sure of the future that he puts new heart into the discouraged settlement, is the first to "quit." The girl, by that time his wife, refuses to go with him, stays by the "soddy," and is on the point of death in childbed when his heart wins him back from the luxury of the East; and so she returns to life and happiness with her pusillanimous mate.

The writer has tasted of French realism, perhaps by way of the late Frank Norris and his disciples. Her melodrama is decorated with patches of description in the brave manner. The neighbors flock to complete the rearing of the soddy, and at midday they feast together: "Bestially they crammed, greedy enough, these grimy creatures, eating rudely, speechlessly at first, fiercely rending the tissues that hours of toil had torn down like a force scattering fortresses. Bestial, splendid—the animal, the man, united—they carved, glutted, heaved great sighs of replenishment. . . . They sliced, smacked, surfeited, to renew their powers for the building." In short, these American pioneers comport themselves like the French peasants of Zola, and their exploits are recorded in an idiom roughly resembling his own. So lingers the hope, common enough a decade or two ago, of producing a great American novel with the aid of a foreign accent.

The Seer. By Perley Moore Sheehan. New York: Moffat, Yard & Co.

Here again is the figure of the modern prophet and healer whom our novelists and playwrights have so frequently tried to interpret of late. But the "seer" of Mr. Sheehan is not a mere replica of former studies. His most important point of difference from most of them is his joyousness. The world expects the saint and the miracle-worker to wear a long face, or, at most, a face lighted with unearthly cheer. The "Faith Healer" of the late William Vaughn Moody, for example, is capable of rapture, but not of merriment. The Rev. Constant Gath, on the other hand, is jolly. He has a mellow sense of humor, and loves to exercise it. He not only preaches that the world is a place to be happy in, he is happy himself. Even sin does not call for gloom: "Don't you reckon God understands?" he cries to his thousands. "He designed you, brother, sister, and made you what you are. There's no occasion to apologize. Don't regret, don't be remorseful, don't give way to despair. You can't queer yourself with God, whatever you do."

Evidently much may be done by a man with a creed like this, with a magnetic presence, a pure heart, and a gift of healing. The thousands flock to his standard. He founds an ideal community on the outskirts of a grimy manufacturing town. His fame and influence spread all over the country, and beyond. Unfortunately, the creation of a magnificent being of this order involves a sad obligation on the part of his creator. He must be killed off before it becomes necessary to describe the whole world as made anew by the spread of his power—which would be false as history and tame as fiction. The latter part of the present narrative, leading up to this necessary event, is strained and melodramatic. If the man himself could have been presented as a picture, and left at that, this would have been a better book: but it would not have been a story!

London Lavender. By E. V. Lucas. New York: The Macmillan Co.

Mr. Falconer, who made so many happy discoveries in "Over Bemerton's," is here married and living with his wife in a London lodging-house. His discoveries continue, the most notable now being a man who tends the apes in the Zoo and meditates over his pets in a manner that might honor a philosophizing observer of things human instead of simian. Other men and women come and go, including the daughter of Mr. Ingleside, with whom we became acquainted in the novel of that name, and an editor who gathers many strange talkers into his chambers. Altogether the book is the same delightful farrago of fun and sly wisdom which made "Over Bemerton's" so signal a success. Nothing here, perhaps, is quite so good as the Chinese biographies in the first volume, but the naming of Lavender Falconer, who appears properly at the end of the present volume, is in an altogether charming vein of drollery.

WILLIAM MORRIS.

The Collected Works of William Morris. With Introductions by his daughter, May Morris. Vol. XIII, The Odyssey of Homer. Vol. XIV, The House of the Wolfings; The Story of the Glittering Plain. Vol. XV, The Roots of the Mountains. Vol. XVI, News from Nowhere; A Dream of John Ball; A King's Lesson. New York: Longmans, Green & Co.

These four new volumes (XIII to XVI) of the great edition of William Morris bring us to a section of his works distinctly lower in value than the magnificent circle of poems in "The Earthly Paradise" and "Sigurd." The opening lines of Miss May Morris's Introduction to Vol. XIII indicate some of the reasons why this later work shows a falling off in tone:

> In April, 1886. Mother hears, "I came back from the Irishry all safe last night, but, as I suppose May has told you, I am off to Leeds and Bradford on Saturday, and shall not be back thence till Tuesday: after that peace as far as travelling is concerned till the end of June. I had a good passage back, and did 50 lines of Homer on the boat—also ate my dinner there."
>
> Nearly a year later he writes to her in Rome, "Homer goes on and will be out in about a month: but Smith is insisting on paper-hangings, so I must do one, at least, besides those I have in hand."
>
> The translation of the Odyssey was written amidst all the racket of what my father speaks of (somewhat ruefully) as "the pernicious practice of what may be called professional agitation."

We have seen this multifariousness employed before, and remember that Morris once told a young aspirant that a true poet should be able to wind off an epic from his brain while his fingers were winding off cloth on the loom—or words to that effect. But a new disturbing factor has now been introduced into his life—Socialism and the burning zeal to reform men, as well as the arts of men. We are bound to suspect that diverting of his energies, hitherto directed exclusively to æsthetic ends, is in part the cause of so lamentable an artistic failure as his version of the "Odyssey," though no doubt his Northern studies also had something to do with such a falsification of Homer as greets us in the beginning of the poem:

> Tell me, O Muse, of the Shifty, the man who
> wandered afar,
> After the Holy Burg, Troy-town, he had
> wasted with war.

Opinions may vary in regard to the prose tales that occupy the other three volumes before us. To the reviewer who now meets them in their splendid new dress, they have never been particularly interesting.

The introductions of Miss Morris continue their charm. Naturally, we hear much in those that accompany the present volumes of the poet's ill-timed incursion into politics. But there are delightful pictures of the home life intermingled. Volume XIII, in particular, contains further descriptions of Kelmscott, which is also visualized for us by photogravures of several rooms.

Thy Rod and Thy Staff. By Arthur Christopher Benson. New York: G. P. Putnam's Sons. $1.50 net.

All is grist that comes to Mr. Benson's mill. An attack of neurasthenia that would have laid most of us low, merely supplies him with material for a new book. The nervous breakdown came upon Mr. Benson in 1907, and not merely destroyed his power to work or to enjoy for two dreadful years, but altered much of that view of life and that way of taking it which formed the background of many of his former works. To this change in his point of view he had, in fact, already referred in "The Silent Isle"—a book which he calls "a record of an experiment in happiness." "It was my design," he tells us in the Epilogue to that book, "to live alone in joy; not to exclude others, but to admit them for my pleasure and at my will. I thought that by desiring little, by sacrificing quantity of delight for quality, I should gain much. And I will as frankly confess that I did not succeed in capturing the tranquillity I desired." And he adds in the book under review,

> The vital, the profound mistake of my little experiment was that I tried to arrange my life on romantic lines. I don't know how one can learn that this is not possible except by doing it and finding it a failure. Many people have not the chance of doing it at all, and that is perhaps a happier solution; but I found myself at the age of two-and-forty a free man after a very busy professional life of twenty years, with enough to live upon, no claims, no family ties. It was then that an ideal took shape, to live the poetic life. I thought I could make my writing the solid business of my life, and that otherwise I could live simply and quietly, avoiding tiresome routine and business duties, seeing just the people I liked, and practicing to enjoy solitude.

It was his illness that brought him both the sense of his previous failure and his new view of life. He learned from it, as he tells us, many things—the reality and eternity of the soul, the love and the presence of God even in sorrow and pain, the mission of suffering, the glory of the life of service.

It is inevitable in a book of this sort that the pronoun "I" should figure with extreme prominence. The book is entirely about himself—his symptoms, his sufferings, his despairs, his ideas, his ideals, his failures, his lessons, his joys. It often seems less like a book than like a letter from an intimate friend who has just been through a long illness. Not that it contains anything in positively poor taste, but one wonders why Mr. Benson should have told us all about it. And one wonders especially why he should have said it over in so many ways. Mr. Benson is a master of the Art of Beautiful Repetition—but we all knew that without this new demonstration. "Thy Rod and Thy Staff" contains exactly 300 pages, and it might equally well have contained 50 or 600. One cannot avoid a sneaking suspicion that Mr. Benson wanted to make a book out of it. It is to be hoped that his rather fatal fluency will not tempt him into writing too many books, and that he will look to it lest his words run completely away with his ideas.

Yet though we may at first wonder why Mr. Benson thought it worth his while to tell us so much about himself, we shall realize, on further reflection, that he had a very solid reason for it. For the fact is, there are thousands of people in England and America who are eager to know everything about Mr. Benson that he is willing to tell. Indeed, your true Bensonian will welcome even the repetitions—they are so charmingly phrased! To him—or rather, to her (and she is often to be met with and is usually a person of excellent taste)—Mr. Benson's writings have been a light in the darkness. And even the non-Bensonian must admit that Mr. Benson is one of the real forces in our English world for hopeful and spiritual living.

The Works of Thomas Deloney. Edited by Francis Oscar Mann. New York: Henry Frowde. $5.75.

Deloney's writings are affiliated with several literary types, nearly all popular. He made a number of new ballads, and rehandled some ancient ones. He touched the *genre* of the "Fall of Princes," or *De Casibus*, by rhyming a number of tales from Holinshed and from current popular tradition about English kings, queens, and worthies. He probably invented, or perhaps rather compounded, one new form—a series of prose anecdotes about tradespeople, anecdotes loosely held together by common personages. This *genre*, essentially *bourgeois* as it is, yet shows traces of romance, of the picaresque tale, and of the "London tract"—a form fully exemplified in the work of Robert Greene. In Deloney's stories about tradespeople there are touches also of what, were it in dramatic form, would be "domestic tragedy"; and from these stories, too, the way leads quite straight to the comedies of Dekker, who was close upon Deloney's track. Dekker and, possibly, Ben Jonson seem to be Deloney's only followers. Richardson, for instance, gets nothing from him.

Though Deloney offers plenty of realistic raw material, this is not literature. His work, like Lillo's "George Barnwell," or "Les Contemporaines" of Restif de la Bretonne, moves upon a lower level. Always ready to be snatched up into literature, Deloney, in fact, always remains below it, and does not have the good fortune to contribute anything whatever to the development of the English novel. It is to be regretted that the present editor has continued the fashion of greatly overestimating both the merits and the influence of Deloney's work. Most of it is "sad stuff." It emphatically does not follow the alleged "progress of realism . . . towards characterization and construction" (p. xxvii), for it is never more than a string of anecdotes; and the assertion that in it "we may justly find the highest achievement of the Elizabethan novel" (p. xiv) can hardly be taken seriously.

Deloney now appears for the first time in a collected edition, or rather reprint. As the early editions are fairly correct, the present text, despite some eccentricities and blind passages which the editor has left untouched, is satisfactory on the whole. So, too, is the treatment of Deloney's sources; though the editor might well have noticed that "A pastorall Song" (p. 344) is a palpable imitation of the "Shepherds Calendar"; that "Taprobana" (p. 47, l. 30) and "Cea" (p. 48, l. 27) are taken respectively from Greene's "Alcida" and "Carde of Fancie"; and that the unnatural natural history about the bull and the figtree (p. 82, l. 26) comes from "Euphues." More than doubtful is the etymology (note on p. 80, l. 15) which explains *drenched* as "the causative verb from *drown*." But the most serious defect of this edition, apart from the inexcusable absence of an index, is the lack of any adequate study of Deloney's words, locutions, and proverbs. Much of this material doubtless is to be found in Heywood, Halliwell, and other collections: it was an editor's business to make it available in his notes. The following, among many others, are left unexplained: portigues (50, 11); Dick Piper (88, 24); let their terme die (106, 14); giue the slampam (129, 16); changing his copy (131, 37); thou gauest the Crow a pudding (163, 8); Whoose mare is dead? (*ibid.*, 14); the biggest place of your legge is next to your shooe (235, 34). As Deloney's work, in its almost total want of literary merit, is valuable chiefly as a treasury of Elizabethan folk-speech and folk-manners, a study of the kind indicated would seem eminently desirable. It might, indeed, have led the editor to hesitate in attributing to Deloney the authorship of one of the tracts here reprinted—"Canaans Calamitie." In the letter "To the Gentlemen Readers," T. D., who may as well be

Dekker as Deloney, speaks (p. 419) of "better bread then could be made of Wheate." If we are right in crediting this phrase to Sancho Panza, T. D. cannot be Deloney, who died in 1600, the year in which "Don Quixote" was published.

BOOKS FOR CHILDREN.—I.

Among the reprints for the holiday season we invariably find the Lambs' "Tales from Shakespeare." The Lippincotts have imported a two-volume edition, wherein H. S. Morris has added sixteen plays not treated by "Elia" and his sister. The book is sumptuous in its color plates, and is well printed. After Lamb has been read and relished, it is high time for the child to turn to such an excellent method as that employed by Thomas Carter, in "Shakespeare's English Kings" (Crowell). In addition to its agreeable format, it includes judicious excerpts from the plays, and is the direct road leading towards the original Shakespearean text.

There are three other standard books in the class of reprints. Holt has issued a "Gulliver," generous in its color and black-and-white pictures, duly heralding the adventures in Lilliput and Brobdingnag; there is likewise the same (Doubleday), edited by Anna Tweed, under the supervision of Clifton Johnson, who believes in defacing a man's text in order to bring it within the comprehension of juvenile readers. This latter method we cannot accept. If a child reads Swift, let his own mental capacity be his own editor; he will remember only what he understands. Little, Brown have imported a tasteful issue of Kingsley's "Water-Babies," in which Ethel Everett's color plates replace entirely the old-time line cuts. Thus the old order changeth, though the stories remain the same in their freshness. Arthur Rackham has disported himself very humorously through the pages of "Æsop's Fables" (Doubleday). His color work and his pen sketches are thoroughly in accord with the irony of the morals. The volume is unworthily bound, for no one could tell from the cover what riches were within. Gilbert Chesterton has written an introduction which epitomizes in epigram the growth of the fable and its accepted conventions. Thackeray wrote immortally on children's illustrated books; we predict that Chesterton will be quoted in the future on fables. His introduction is for adults. Mary Lamb's "Mrs. Leicester's School" (Dutton) is less read than it should be. This reprint is charmingly old-fashioned, in its shape and pictures reminiscent of Kate Greenaway. Charles Lamb had only part share in the creation of this book which brother and sister regarded as a "pot-boiler for Godwin," but which has proved one of the loveliest things in the language.

We are glad to welcome Sir George Laurence Gomme's "The King's Story Book" (Longmans), being, as the title page designates, "historical stories picturing the reigns of English monarchs." This has been out of print for some time. A glance at the contents alone indicates what an invaluable source Scott has been to the editor. This should be a strong plea for the boy to read his Waverley novels. Here is a worthy guide to English romantic literature. Of different character is Eugene Field's "Christmas Tales and Christmas Verse" (Scribner), wherein we recognize many of his delicate "Profitable Tales." There is gentle beauty in Field's fiction, akin to Lanier's ballad spirit in "Into the Woods." The super-calendered paper used in this book allows effective handling of bold-faced type, but the illustrations are somewhat cheap for so handsome a volume. Jack London's "The Call of the Wild" (Macmillan) appears in effective form. The very cover suggests northern lights and Klondike loneliness. Kate Douglas Wiggin's "The Birds' Christmas Carol" (Houghton) comes to us in holiday form to celebrate its twenty-six years of existence. The illustrations, by Katharine Wireman, are tinted in color. In a way, Mrs. Wiggin's little book, "A Child's Journey with Dickens" (Houghton) may be regarded as a reprint of her address read at the Dickens centenary dinner last winter. It recounts delightfully a journey made with the great writer in a day-coach, when the wee girl gave candid views on literature. In passing, let us call attention to Bayard Taylor's "Boys of Other Countries" (Putnam), which every library should possess.

In our youthful day, we were not indulged with such regal books as Walter Jerrold's "Big Book of Fables" (Caldwell); nor did we know the delightful conceits of the artist, Charles Robinson, who is past-master in the use of line. What a revel of fancy in this gold and red binding; though only a few fables at a time should be given as a dose, to keep the morals palatable. The pictures alone furnish entertainment for hours. Those who are destined to own this treasure-house should likewise receive the companion "Big Book of Nursery Rhymes" and the "Big Book of Fairy Tales."

Howard Pyle did so well by Robin Hood that there was scarcely call for another retelling. But Louis Rhead's "Bold Robin Hood," uniform with the Harpers' issue of "The Swiss Family Robinson" and "Tom Brown at Rugby," does not impair the ballad spirit, either in text or in drawing. Some day an artist will illustrate worthily all the ballads bearing upon Robin Hood. A book as large as they make them is H. E. Marshall's "A History of France" (Doran), an excellent survey, enhanced by marginal notes. The narrative ends with the Third Empire. "Ten Girls from History" (Duffield) is a continuation of Kate Dickinson Sweetser's plan of other volumes. Particularly spirited in its biographical account is the chapter on Queen Victoria. Accuracy of historic fact has been the author's commendable aim; luckily, she has likewise treated her characters as human beings, something which cannot be said for most writers of biography for children. An excellent idea underlies "Little-Known Sisters of Well-Known Men" (Dana Estes), by Sarah G. Pomeroy. Many a girl reader will find inspiration in the accounts of Dorothy Wordsworth, Mary Lamb, Elizabeth Whittier, and others, whose help did so much for literature.

Ten paintings by Jessie Willcox Smith, concerning the attractive subject of "Dickens's Children" (Scribner), though they are bound together in suitable covers, suggest frames for the play-room wall. Adelia Beard has done a very clever thing in her "cut-out" books of "Birds" (Stokes). By means of manual labor, with a little instruction, a youngster may make a bird, in the process learning its color, its habitat, its song—an assured way of never forgetting.

With real pleasure we recommend the American issue of Boutet de Monvel's decorative pages for "Old Songs and Rounds" (Duffield). There is nothing more charming in the entire realm of picture books. The French words have been translated in eighteen pages grafted upon the French sheets, which the publishers imported. The pictures are like water colors, simple in conception and playful in arrangement. The songs are suited to child voices. Let us have more of these importations.

Let fathers rejoice in H. G. Wells's "Floor Games" (Small, Maynard), a book that deserves a wide sale, not only because of its jolly spirit, but because of the field opened up for the "mere man" in the nursery. Here is Wells in all his varied interests; the sociologist peeks out from behind empty boxes, leaden soldiers, and useful boards. Floors are not only to be walked on, but to be played on. Broken toys assume new dignity; corrugated board around bottles becomes as valuable as shingles.

Notes

Among Mitchell Kennerley's holiday books are the following: "Ashes of Incense," a novel by the anonymous author of "Mastering Flame"; "The Lyric Year," one hundred poems by one hundred American authors; "The Women of Shakespeare," by Frank Harris; "Woman's Share in Social Culture," by Anna Garlin Spencer; "Old Chinatown," a book of pictures by Arnold Genthe, with descriptive text by Will Irwin, and "Murphy," a message to dog-lovers, by Major Gambier-Parry.

The third and last volume (Neil-Young) of the second supplement of the "Dictionary of National Biography" is published this week. Among its contributors, Sir Sidney Lee writes on Goldwin Smith and Sir Leslie Stephen; Mr. Gosse on Swinburne, and Mr. Masefield on J. M. Synge.

Bacon's Essays will appear in what the publishers, Messrs. Black, describe as a "popular *édition de luxe.*" The text is that of 1673, collated with the last edition issued by Bacon in 1625.

"The Guardians of the Columbia," reviewed by us at length October 31, was there credited to G. P. Putnam's Sons. The book is now regularly published and sold by the author, John H. Williams, of Tacoma, Wash.

To a lover of the decorative ways of the eighteenth century, what title could be more alluring than "At Prior Park, etc.," by Austin Dobson? To that home of "low-born Allen" outside of Bath, built from the proceeds of honest industry, came Pope and Miss Blount, Fielding, Warburton, and many a lesser man; and we may be sure beforehand that Mr. Dobson has not missed the picturesque and humane aspects of such a gathering place. It was at Prior Park that the burly Warburton, for once, at least, met his match, and from a comedian. "When they were discussing the execution of Charles I, which Quin upheld, Warburton asked loftily by what law he was condemned, and Quin retorted: 'By all the law which he had left in the land!' The Bishop could find no rejoinder."

The "etc." of Mr. Dobson's title stands for "and other papers." These range through an attractive circle of subjects. One essay deals with "The Portraits of Carmontelle," an extraordinary series of sketches of English and French notables in the second half of the century. Then we go with Garrick on the Grand Tour; then we learn something of Loutherbourg, of the Royal Academy; read two newly found letters of Fielding, with our guide's pleasant comment; pass on to a French naval officer, the Bailli de Suffren; walk through the famous park of Stowe, where the Whiggery of the Temples was nursed, and where many authors and greater folk gave themselves up to the charm of romantically arranged scenery; hear the melancholy story of Robert Lloyd, poet and author by profession, who ended his brief career in the Fleet prison; and end with a pleasant discourse on Gray's biographer, the Rev. William Mason. Altogether, there is a good deal of sober entertainment in the book. (Frederick A. Stokes Co.)

In collecting material for the Nicolay and Hay "Abraham Lincoln: A History," J. G. Nicolay put aside a considerable quantity of data for a chapter intended to be entitled "Personal Traits"; but the bulk of the matter, together with the ultimate plan of the work, forbade the use of the material in the way proposed. Miss Helen Nicolay has now made it the basis of her "Personal Traits of Abraham Lincoln" (Century). A good many of the incidents have already been told elsewhere, and the substantive value of the book for the historian is not great. As a friendly picture of the tastes, habits, and everyday life of Lincoln, however, it has both interest and worth, and the more because of the delicacy with which the task has been performed. Of the innumerable stories attributed to Lincoln, less than a hundred, in Miss Nicolay's opinion, are probably genuine; but the survival of even that number seems, on the whole, notable. Of the contributions to the history of the Civil War, Nicolay's memorandum of a conversation with Lincoln, October 2, 1861, is the most interesting: "Frémont ready to rebel," "Chase despairing," "Cameron utterly ignorant and regardless of the course of things," "Credit gone at St. Louis, Cincinnati, Springfield," "Everything in the West, military and financial . . . in hopeless confusion." One puts down the book with a new impression of Lincoln's moral strength, and of his patience in making the best of bad conditions.

Despite its title, "The Story of The Bronx" (Putnam), by Stephen Jenkins, is rather an assemblage of facts and incidents than a narrative. The plan of the book is comprehensive. An opening chapter on the political history of the several sections composing the borough and on its topography is followed by a chronological account of it to the end of the Revolution; this is succeeded by a few chapters on special features of the district, such as churches and parks, and the concluding part of the volume is a series of chapters on the various portions of the borough. In this way the ground is covered minutely, so that as a reference book the work is an undeniable success, especially since it has a good index, a copious supply of illustrations belonging to all periods of the borough's history, and a large and, in general, excellent map. The industry of the author is evident on every page, but he does not give us assurance of his historical temper when he explains that he can furnish no bibliography, since for more than a decade he has been jotting down facts and incidents as he has come upon them, "either in books, or in the daily press, or in magazines," and has kept no account of his sources. Fortunately, this confession is mitigated for the earlier parts of the story by the statement that he has had recourse to the standard histories of Westchester County. The first recorded activity in relation to what is now the Borough of the Bronx was in 1639, when three Indian sachems, "in consideration of a certain lot of merchandise," conveyed to the West India Company a tract of land called Keskeskeck. Two years later Jonas Bronk made a purchase of five hundred acres between the Harlem and the Aquahung Rivers; the latter soon lost its Indian name and became known as Bronk's River, and later, by a natural transition, as the Bronx. The borough was created January 1, 1898, and at the recent election it became a county also. It boasts nearly half a million population, and has its share of historic shrines, among them the cottage in which Poe wrote "Ulalume."

In "Around the Clock in Europe" Charles Fish Howell strings an old-fashioned series of travel sketches upon a new thread. There is a special hour for seeing a city aright. Edinburgh should be viewed at one, and Paris just twelve hours later. Three o'clock is right for Rome, and nine for Heidelberg. One should pass from Berlin at six to London at seven. At Venice the witching hour is that before midnight. Such is the plan, and, while in the main hour and place seem happily adjusted, occasionally the union is far-fetched. By dint of obvious expedients the limitation of the hour is evaded. One sees Venice at night, but an "If it were daylight" leads to the usual description of canals and palaces. Mr. Howell is nothing if not a sentimental traveller. From the jocose and epigrammatic to the emotional and highflown his mood shifts flexibly, lapsing occasionally into mere flippancy or gush. Without being in any way an important addition to the literature of portraiture of places, this is a diverting book. There are many illustrations after crayon sketches by Harold Field Kellogg. (Houghton Mifflin.)

Of the nine new volumes in the Home University Library (Holt), no less than four are by American writers, a far higher ratio than this series has hitherto shown. In "Great American Writers," by Professors Trent and Erskine, the attempt has evidently been made to be intensive rather than inclusive. The characterization of Edgar Allan Poe's horror stories as demonstrations of abstract formulas does not appeal to the present writer. Prof. C. M. Andrews in "The Colonial Period" traces broad lines of development; his story runs up and down the chain of thirteen colonies to illustrate this or that general contention. The result is confusing from the chronological point of view; but the book has value. Prof. B. W. Bacon's "The Making of the New Testament" is the most gratifying volume in the present group; it is possibly a little above the head of the general reader, but that is a risk which the editors of the Home University Library have taken before this. Mr. John R. Spears's "Master Mariners" falls far short of what an account of the art of navigation should be. It takes its history from the schoolbooks and adds to it such extraordinary personal data as the fact that the battle of Actium was described by Herodotus. S. J. Chapman's "Political Economy" is very hard reading. The same is true of C. E. Moore's "Ethics," and strangely enough for the very reason that the author labors so hard to make his meaning clear; but we get repetition without clarity. Other volumes are "The Making of the Earth," by J. W. Gregory, a straightforward bit of exposition; "Electricity," by Gilbert Kapp, and "Missions," by Louise Creighton.

A new life of Edward Irving (Boston: Sherman, French), by Jean Christie Root, passes lightly over the limitations of that strange religious genius, without adding to the facts which have been often told of him, or contributing anything to the analysis of his remarkable personality. The truth is that Carlyle, Coleridge, and Mrs. Olyphant have left little to be said respecting Irving. He was "a minister of Christ, after the order of Paul," a "Christian priest," who "strove with the whole force that was in him to *be* it," and his gifts as a religious orator and in the leadership of a congregation in extemporary prayer have rarely been surpassed. All this has been said by masters before, and the author of the present sketch seeks to justify her labors by attempting to show that Irving "more clearly foreshadowed the problems and truths of to-day than any one man in his period." The attempt is a signal failure. Irving was a mystic, and his pages glow with many of the timeless truths of the seers, but his controlling convictions have no force for this age. His vagaries respecting predictive prophecy, millennialism, and the gift of tongues disqualified him for leadership in the generations succeeding his own. They may be pardoned as the limitations of a genius, but they cannot be forgotten when Irving is put forth as a prophet for the present.

The third volume of "A Cyclopædia of Education" (Macmillan), edited by Paul Monroe, includes titles from Gailhard to Libanius. Preponderant space is accorded to topics which only recently have gained significance in education, such as "Household Arts in Education" (fourteen pages) and "Industrial Education" (nineteen pages). Herodotus and Juvenal are not mentioned, and Homer receives about as much attention as horticulture. On the other hand, Professor Goodell, of Yale, contributes an excellent article on the teaching of Greek, and Professor Lodge, of Columbia, offers suggestions on instruction in Latin which, if followed, would do much to rehabilitate the classics in both school and college. The articles on national and State educational systems and schools are excellent, notably that on "Education in Germany," by F. M. Schiele. Among the topics of study treated are Geography, Geology, and Grammar. The cyclopædia will be useful for the large number of titles in educational history and biography. The principal facts concerning the many colleges and universities in the United States are recorded, including their present statistics.

In his "Omens and Superstitions of Southern India" (McBride, Nast & Co.), Edgar Thurston, sometime superintendent of the Ethnographic Survey of the Madras Presidency, has collected, systemized, supplemented, and made readily accessible the material already presented in his "Ethnographic Notes in Southern India" (1906), and in the seven volumes of his "Castes and Tribes of Southern India" (1909). The book "deals mainly with some aspects of what may be termed the psychical life of the inhabitants of the Madras Presidency and the Native States of Travancore and Cochin." The result is a series of data arranged under the heads of Omens; Animal Superstitions; the Evil Eye; Snake Worship; Vows, Votive and Other Offerings; Charms; Human Sacrifice; Magic and Human Life; Magic and Magicians; Divination and Fortune-Telling; Some Agricultural Ceremonies; and Rain-Making Ceremonies. Mr. Thurston wisely contents himself with a presentation of data, and avoids attempts at explanation or comparison with analogous beliefs and practices elsewhere. On the other hand, the student of comparative religion in general will find in this volume an abundance of illustrative material from a relatively little-known country and people. Here may be noted beliefs on boundary ceremonies, cross-roads, coins, disease, lucky and unlucky days, shamanism, earth and earth-deities, magic effigies, hair, iron, crystal-gazing, lamp-ceremonies, ordeals, purification, amulets, the sacred number seven, winnowing-baskets, and the like. The classical scholar will be glad to trace in the lead *yantrams* (tablets inscribed with charms), buried for a time "at a spot over which a person whose death is desired will pass" (p. 186), an interesting analogue to the Latin lead *tabellæ defixionum*. Still more important is the light cast upon the curious "frog hymn" of the Rigveda (vii, 103). This hymn, still taken by Geldner ("Rigveda in Auswahl," ii, 117) to be a satire on the Brahman priesthood, is construed by such scholars as Haug, Oldenberg, Hillebrandt, and von Schroeder to be a rain-charm; and indirect testimony to the correctness of their interpretation is given by the use of the frog in rain-making ceremonies both in southern India (Thurston, pp. 305-306), and in the North (Crooke, "Popular Religion and Folk-Lore of Northern India," I, 73, II, 256).

L. L. Shadwell has carefully edited four volumes entitled "Enactments in Parliament specially concerning the Universities of Oxford and Cambridge, the Colleges and Halls therein, and the Colleges of Winchester, Eton, and Westminster" (Frowde). It completely supersedes Dr. Griffiths's similar but much briefer collection, which was published in 1869, and which for some time has been out of print. Mr. Shadwell has taken his documents from the printed Statutes of the Realm and arranged them chronologically. In cases of doubt, prior to 1850, he has verified his text by comparison with the original rolls. Since 1850 this is unnecessary, as the first regular printed edition is printed from the same type as the official vellum copy which has already received the royal assent. Mr. Shadwell has made his work conveniently usable by a full, analytical table of contents, excellent brief notes, and a fairly complete index. From the first statute of 37 Edw. III, which defines who may wear fur upon their gowns, down to the last statute of 16 Dec., 1911, which compels English publishers to donate copies of their works to the libraries of Oxford, Cambridge, Edinburgh, and Dublin, as well as to the British Museum, these enactments deal with the widest variety of subjects imaginable. They define the police power which the mediæval university, within its own jurisdiction, possessed over all sorts of offences, from that of selling putrid fish to that of assault with intent to kill. Many of the enactments are occupied with making exceptions to general statutes in the interest of the masters and scholars. For instance, in the general "Acte for repressing the odious and loathsome synne of Drunckennes" there is a provision that nothing therein contained shall "bee prejudiciall to either of the twoe universities of this Lande." The statute of 13 Eliz. c. 29, entitled, with phonetic precision, "An acte for Thincorporation of bothe Thunyversities," relieved the universities from the necessity of seeking a new confirmation of their privileges at the accession of every new ruler, and is the statute under which they now hold their lands and rights.

"The proof of an explorer's doings is his final book, which requires months and years to prepare," says Dr. Frederick A. Cook, in the closing chapter of his "final summary of the Polar controversy" ("My Attainment of the Pole"; Mitchell Kennerley). We have gone over the essential parts of the volume with some care, and cannot see that it gives the reader any more solid ground to stand on than was available before, so far as the mere fact of attainment of the Pole is concerned. The one thing which the whole miserable episode has satisfactorily proved to unbiassed and reasonable minds is that neither a travel narrative nor a fairly consistent set of observations can of itself furnish indubitable proof that the author has actually visited the points indicated. The problem falls back heavily upon the scientific competence and good faith of the explorer, and on that basis it is apparently useless to hope that anything can now be said on either side which will leave no room for further dispute. Dr. Cook has an easy task in showing that some of the lines of attack used against him in the heat of controversy can be turned plausibly against Peary, but in these points the main question is not touched. Let us hope that the next expedition which attempts to reach the Pole will have learned from this sad business sufficient wisdom not to allow credit for its accomplishments to rest upon the work and word of any one individual. Peary's pride was a terribly bad counsellor when it led him to desire that no other white man (which meant, in that case, no other man competent to be accepted as a witness) should share with him the honor of the first visit to the Pole. The chances are wholly in favor of the supposition that Ross Marvin would be living to-day had Peary not ordered him back at the beginning of the last stretch; and the support of a man of his character and competence would have been a tower of strength in the conquest of public opinion. As for Dr. Cook, assuming the possibility that he may have been in the vicinity of the Pole, his book only furnishes a new demonstration of the hopelessness of his cause in the court of careful opinion. He does not talk the language of the cool, competent observer, and no amount of effective attack upon the motives and character of some of those who have opposed his claims can put beneath those claims that foundation of positive evidence which they have lacked from the start and lack to-day.

A slow-moving barge, achieving a maximum speed of three miles an hour, has its attractions as a means of locomotion, if only by contrast with the fevered speed of the automobile. In "The Flower of Gloster" (Dodd, Mead) E. Temple Thurston gives some impressions of a month's vacation spent in this fashion on some of the most beautiful waterways of England. The narrative is light and pleasant reading, if not particularly absorbing, and reveals the author a keen student of nature and of human nature. It possesses, too, the commendable quality of avoiding pleonastic description of places made familiar in the annals of touristry.

In Herbert A. Evans's "Castles of England and Wales" (Doran) there crops up the chronic feud between archæologist and artist. To Mr. Evans ivy clinging to ruined walls is anathema, and the bare pattern of the masonry is for him a far more lovely sight than the green and gray of old stone and ivy. He is, of course, severely rational from the archæological point of view, and it is with a blush that we admit to a partiality for the parasite. That, however, is the only point on which we would venture to join issue with Mr. Evans. His book is an excellently clear and scholarly description of the structure of thirty-three of the most interesting fortresses of England and Wales. The term "fortresses" is used advisedly, for Mr. Evans's consideration is, with a single exception, that of Dunstantburgh, confined to those castles, built previous to 1300, the importance of which was primarily a military one. The book is fully illustrated, and a plan of each castle is given.

The *Insel-Verlag*, of Leipzig, recently published "Goethe's Liebesgedichte" in a handsome volume that will be very popular as a Christmas present. The editor, Hans Gerhard Gräf, has grouped Goethe's love lyrics under the names of his various sweethearts in the order of their entrance into his life, and, so far as possible, has arranged the poems of each group chronologically. Each division is introduced by a quotation from Goethe or one of his contemporaries, suggesting the background. Such lyrics as the editor could not readily and without question include under one of these headings are arranged chronologically in an Anhang. Adaptations and imitations of the love songs of other writers are excluded from this collection. The usual preface is replaced by a well-known quotation from Goethe's review of the "Gedichte von einem Polnischen Juden," in which the rising young writer unconsciously prophesies the character of his own future lyrics. The collection closes with the poem "Einlass," the poet's plea for admission to Paradise on the grounds of the occasion and contents of his poetry. In case more than one text of a poem has come down to us, Gräf has chosen for this edition the earliest version, as the one best embodying the original inspiration. A table of contents and an alphabetical index of first lines conclude the volume.

This book is a valuable result of the editor's long occupation with Goethe's lyrics, which he is editing for the chronological Wilhelm Ernst Ausgabe of the works, and with which he is dealing in the final volumes of his monumental work, "Goethe über seine Dichtungen." Now that the book has appeared, the wonder is that such an edition of this justly famous love breviary should never before have been thought of. In the field of artistic bookmaking, to which a few German publishers have devoted considerable attention of late, this volume is a notable achievement. It is printed from clear Fraktur type that recalls a style of letters in use during Goethe's life, and the cover is designed to suggest the early nineteenth century.

If any one doubts our possession of interesting places, let him take a look at a few of the pages of "Historic Summer Haunts from Newport to Portland," by F. Lauriston Bullard, with illustrations by Louis H. Ruyl (Little, Brown). Yet a reader will do well not to judge the book by its first fifty-odd pages. The chapters on Newport and Plymouth are not a fair sample of the rest. It is not until the narrator gets to Quincy that he begins to show that zest for his rôle of guide that makes his intimate knowledge of this baker's dozen of New England towns a living thing. From this point he overflows with historic and literary information, and presents it in agreeable style. The result, for the major portion of the volume, is a humanized Baedeker. Not only the more familiar and more richly historic ground of Lexington and Concord is traversed, but also the quaint recesses and bold sea-wall of Marblehead and Gloucester, the dark and bloody hill of Salem, the peaceful shades of the Whittier country, and the ancient streets of Newburyport and Portsmouth. The value of the book is enhanced by an intelligent index.

The Rev. Dr. Robert Collyer, pastor emeritus of the Unitarian Church of the Messiah, New York, died at his home in that city on Saturday. He was born at Keighley, in Yorkshire, England, in 1823. He learned the blacksmith trade of his father, which he followed for a time after coming to this country in 1850. Beginning his ministry as a Methodist, he became a Unitarian in 1859; and from 1879 he had been attached to the church in New York. His writings include: "Nature and Life," "The Life That Now Is," "The Simple Truth—a Home Book," "Talks to Young Men," "History of Ilkley in Yorkshire" (in collaboration), and "Things New and Old."

Dr. William Waugh Smith, chancellor of the Randolph-Macon system of colleges, died in Lynchburg, Va., on Friday, at the age of sixty-seven. He was the author of "Outlines of Psychology" and "A Comparative Chart of Syntax of Latin, Greek, German, French, and English."

James Gordon, United States Senator from Mississippi for a short term ending early in 1910, died last week at Okolona, Miss. He was born in 1833, and was the author of "The Old Plantation and Other Poems," besides many contributions to the magazines.

Science

SOME BOOKS ON EVOLUTION.

Die Mutationen in der Erblichkeitslehre. Von Hugo de Vries. Berlin: Gebrüder Borntraeger.

Upon the Inheritance of Acquired Characters. By Eugenio Rignano. Translated by Basil C. H. Harvey. Chicago: Open Court Pub. Co. $2 net.

Heredity in Relation to Eugenics. By C. B. Davenport. New York: Henry Holt & Co. $2 net.

The Evolution of Animal Intelligence. By S. J. Holmes. New York: Henry Holt & Co. $2.75.

To students of evolution the recent publication of De Vries is a matter of more than passing interest, since here for the first time he takes occasion to reply to the numerous criticisms of his mutation theory, published eleven years ago. The only serious doubt that has arisen is whether the plant Œnothera Lamarckiana, on which the mutation theory so largely rested, is a hybrid or a "good" species. If a hybrid, the appearance of new types in its offspring may be due to a separation into its elementary constituents, and, if so, these so-called mutants are only re-combination products that need not concern the evolutionary process very profoundly. The fact that O. Lamarckiana has never been found in the wild state has been urged in favor of the view that it is a product of the gardener's skill. De Vries meets this criticism by pointing out that in recent years the study of other species of the evening primrose has shown them producing mutations in the same way as O. Lamarckiana. Hence, mutability is proved to be a property of the genus, and O. Lamarckiana has this property in common with its allies. Consequently, it is a matter of secondary importance whether Lamarck's evening primrose is a hybrid or an elementary species. De Vries has found that, when O. Lamarckiana is crossed with several other species, the new types, O. læta and O. velutina occur. This fact especially has been urged in favor of the hybrid nature of O. Lamarckiana; but it has been shown recently that a common American species, O. grandiflora, behaves in the same way. The argument applies, therefore, equally to a well-known wild form.

It may be well to recall here that De Vries's mutation theory was based not only on the evidence furnished by the evening primrose, but on evidence from a wider field of observation; and in the last ten years an overwhelming body of evidence has established beyond doubt the widespread occurrence of mutation. In fact, mutants have been found wherever they have been sought for carefully. The opponents of the mutation theory have nevertheless centred their attack on the evidence furnished by Lamarck's evening primrose, and mutationists will greet with satisfaction De Vries's able reply to his critics.

It has recently been said, rather pointedly, that there are at present but two schools of evolution: one discusses evolution as a philosophical problem, the other studies evolution according to the methods of science. The former method is well illustrated by Rignano's book, written originally in French and now translated by Professor Harvey. The question of the inheritance of acquired characters bids fair to become one of the persistent problems of philosophy, until the matter is settled once and for all by indisputable scientific evidence. But this evidence is not furnished by Rignano. On the contrary, his book concerns itself in the main with the elaboration of a physical analogy, through which the possibility of such a form of inheritance may be conceived.

As the author says, three new hypotheses, or three new fundamental conceptions, are submitted to the judgment of biologists. The first of these is the hypothesis of "centro-epigenesis," which assumes that, as the embryo develops, its course is regulated and directed from a central station, which is the material contained in the ovary (or testis) of the embryo itself. The coördinative character of the process of development requires, the author believes, the assumption of a directing centre. The general idea, that the body cells (as contrasted with the germ cells) determine their own development, is, he feels, repugnant to the regulative character of the developmental process.

Conversely, every change in the body which gives rise to specific nervous currents deposits in the central germinal material "a very definite substance, which in turn is capable of provoking again exclusively the same specificity of current as that by which it was itself deposited." In this way the germinal material reacts on the body cells of the next individual that arises from it. The third assumption attributes the vital phenomenon essentially to an intranuclear oscillating nervous discharge. In these ways Rignano tries to account for a very questionable process by means of hypotheses more than questionable.

Eugenics is becoming a familiar word. One would suppose that it was related to Socialism, but the Socialists do not seem very keen about it. Professor Davenport's timely book on heredity will find a hearing in many quarters. Eugenics is defined as the science of the improvement of the human race by better breeding. The definition suggests propaganda of some sort, and while the author is careful to state that our present knowledge of heredity in man is too imperfect to warrant the formulation of rules of conduct for matrimony, yet here and there are recipes as to whom one may marry and whom one may not. The success of marriage is, according to the author, measured "by the number of disease-resistant, cultivable offspring that come from it"! A high number is implied, perhaps, but not actually recommended. The book contains a valuable collection of data relating to human heredity, interpreted almost exclusively from the modern standpoint of the Mendelian law. The value of this method of treatment is not likely to be questioned; nevertheless, the experienced reader may feel that the interpretation is not always secure; indeed, the data, which are themselves rather indiscriminately chosen, appear at times forced into the Mendelian mould. But in no other book will be found so much general and special information bearing on heredity in man. If the enthusiasm of the author were more tempered with caution, the value of the treatise would be enhanced. Dealing as it does with matters that touch the human race in a very weak and sensitive point, sympathy and patience are needed to accomplish the highest ends, rather than haste and exposure and impatience. Davenport's book, while wanting somewhat in the one, is not entirely without the other.

Among a number of recent books on comparative psychology, the volume by Professor Holmes on "The Evolution of Animal Intelligence" is probably the most successful attempt to bring before the general reader the modern points of view dealing with this important subject. With the acceptance of the theory of evolution brought about by Darwin's work, there has been little question among scientists that mental as well as structural evolution has taken place. There has been, it is true, some divergence of opinion as to whether simple reflexes have passed through insensible gradations into instincts, instincts into intelligence, and intelligence into reason; or whether these processes do not stand in a continuous line, but rather represent independent processes. Bergson, for example, sharply distinguishes instinct from intelligence—each shows evolutionary changes within set limits. But the highest forms of instinct, he contends, merge into intelligence; nor is instinct lapsed intelligence, as held by not a few psychologists of the post-Darwinian period. Both views are compatible with sound evolutionary reasoning, but the data are lacking that are necessary to establish either view. Holmes follows the more usual course and tries to show that intelligence is only a further stage of instinct, just as instinct, in turn, is only a complex or chain of reflexes. The chick pecks at a grain of wheat—a purely instinctive act. The grain is tasted and swallowed; a sensation of pleasure accompanies the act; henceforth, the act ceases to be instinctive, and through "association" passes into the realm of intelligent acts. The change has been interpreted as a picture of how, through evolution, instinct has become intelligence; but whether instinct has developed into a higher form of the same process, or whether through an instinctive act a new process has been brought to light, is one of the much mooted points of modern comparative psychology. Holmes accepts the pleasure-pain hypothesis of the origin of intelligent acts as formulated by Hobhouse, and before him by James. An instinctive act that is accompanied by pleasurable sensations establishes a chain of reflexes that are repeated whenever the first step in the process is evoked, as by the sight of a grain of wheat in case of the chick. If, instead of the wheat, a nauseous caterpillar is encountered, tested, tasted, and rejected, a different chain of reflexes is established, and the sight of the caterpillar now calls forth the ejection impulse. The ejection impulse acts to inhibit the first step in the process, and the caterpillar is avoided. Attractive as the reasoning appears, it is not flawless, as Holmes admits, for he concludes that the argument may break down in attempting to apply it to the higher forms of learning; yet so far as it affords a useful working hypothesis, he accepts it, because he thinks it takes us a step further towards the solution of the central problem of modern psychology from the point of view of the evolutionist.

A book waited for with great interest is the important—almost spectacular—work, "The Mechanistic Conception of Life," by Jacques Loeb, which is coming from the press of the University of Chicago. The book has been written in such a manner that the layman may understand the work done by Professor Loeb and draw his own conclusions as to the importance of the fact that living creatures have been developed without the interposition of the paternal element.

Scientific knowledge and accuracy, and the scientific frame of mind, have always been more prominent in the writings of John Burroughs than in those of any other literary writer on nature; but never before has this "intellectual intercourse" with nature, as he terms it, been so prominent, even in his own essays, as in "Time and Change" (Houghton Mifflin). For a considerable part of his life, and "especially of late years," Mr. Burroughs has had a deep interest in geology and in the biological and evolutionary implications of that science; and now he publishes his broodings in a book that is a thoughtful yet emotional reading of earth. He has hearkened to "the still, small voice of the rain and the winds, of the frost and the snow," which has enlightened and at the same time disturbed him greatly. Giving, with Meredith,

> To the Legends an alien look.

he has fastened his gaze on Time and Change, and has found that evolution really adds to the wonder of life. But evolution wins intellectual approbation rather than spiritual fervor; we are plunged into "the cosmic chill," which has, fortunately, an exhilaration all its own. It tells us, coldly but triumphantly, that "the creative and poetic imagination has undoubtedly reached its high-water mark," and hence "we shall probably"—(why "probably" after "undoubtedly"?)—"never see the great imaginative works of the past surpassed or even equalled." "Our awe, our reverence, our veneration . . . seem doomed to play less and less part in the future. Poetry and religion, so called, seem doomed to play less and less part in the life of the race in the future." Instead, we shall advance in scientific discovery and interpretation; and religion will give place to humanitarianism. Man "has withdrawn his gaze from heaven and fixed it upon the earth."

Now, if Mr. Burroughs, standing in the atmosphere of the cosmic chill, sees these things in the remote future, it is not for us to assert that the cosmic chill can possibly be wrong in what it reveals. But it is always urbane to be skeptical, and we accordingly question whether the chilly air that environs the author is perfectly free of mist. We think that great imaginative works may very well appear in the future, and that religious faith is not permanently extinguished. And we do not believe that Mr. Burroughs's position is strengthened by his admission, perhaps an unnecessary one, that the evolutionary theory of man's origin must be taken on "faith." In addition to incessant repetition and verbosity, weaknesses from which Mr. Burroughs's style has always suffered, these essays are—sometimes actually, sometimes only in appearance—confused in thought. The concluding essay, "The Gospel of Nature," leaves one in considerable doubt as to what the author has been taught by the outer world. The whole volume conveys the impression that Mr. Burroughs is somewhat lonely and perplexed when "Slabsides" is so far away. The calm and friendly aspects of nature, the gentle breathing of Mother Earth in the meadows and woods of the East, the intimate companionship of the wake-robin and the vesper sparrow—these seem more proper to his genius than "the monsters of Mesozoic and Caenozoic time" and the perilous sublimities of the cosmic chill. Yet we are far from regretting that these essays were published; if none of them is equal to the best work of the author, they nevertheless present one side of Mr. Burroughs's view of nature much more adequately than any of his earlier collections of essays, and, like anything written by Mr. Burroughs, they afford entertaining and profitable reading.

Dr. Edward Curtis, a brother of the late George William Curtis, died at his home in New York on Thursday of last week. He was born in 1838, was a graduate of Harvard, served with distinction in the Civil War, and received the degree of M.D. from the University of Pennsylvania in 1864. After lecturing for a number of years in the College of Physicians and Surgeons of Columbia University, he was appointed professor emeritus in 1886. Among his writings are "A Manual of General Medicinal Technology," "Nature and Health," "Months and Moods," etc.

We have to record the death on Monday of two American astronomers, Prof. Eben Jenks Loomis and Edwin Smith. Professor Loomis was born in Oppenheim, N. Y., in 1828, and studied at the Lawrence Scientific School of Harvard University. For fifty years he was assistant, the greater part of the time senior assistant, in the Nautical Almanac, and in 1889 was a member of the United States Eclipse Expedition to the West Coast of Africa. The following books bear his name: "Wayside Sketches," "An Eclipse Party in Africa," and "A Sunset Idyl, and Other Poems." Professor Loomis was the father of Mabel Loomis Todd, writer and wife of David Todd, the astronomer. Edwin Smith, who, since 1870, was connected with the Coast and Geodetic Survey, died at his home in Washington in his sixty-second year. He was born in New York city and graduated from the College of the City of New York in 1871. Three years later he was put in charge of the party to observe the transit of Venus at the Chatham Islands in the South Pacific. Afterwards he was engaged in determining the force of gravity at Auckland, Sydney, New South Wales; Singapore, Tokio, San Francisco, and Washington, using the three Kater pendulums belonging to the Royal Society of England. For these and subsequent observations, he was recognized by various learned societies.

Drama

With seven new volumes, making forty in all, the "First Folio Shakespeare" is brought to a happy conclusion, for which congratulations are due both to the publishers, Thomas Y. Crowell Company, and to the editor, Charlotte Porter, who completes single-handed the large task entered upon with the aid of Helen A. Clarke. The present instalment brings to us "Henry VI" (3 vols.), "Henry VIII," "Venus and Adonis," "The Rape of Lucrece," and "Sonnets and Passionate Pilgrim." We have several times pointed out the peculiar traits of these handy volumes, but it may be well to repeat the matter on this occasion. The text, as the name of the edition implies, is a literal reprint of the First Folio; the transcription, so far as we have examined it and heard the reports of others, is very accurate. At the bottom of the page the necessary or highly probable emendations are printed, with the source from which they are derived. Further, on the side-margins the meaning of obscure or obsolete words is given; and as these glossarial notes are printed directly in line with the word to be explained, the reader obtains in the easiest possible way the immediate help needed for understanding the text. The play itself is preceded by an introduction, and is followed by a series of appendices. The character of the latter is sufficiently indicated by the titles: "Argument," "Sources," "Duration of the Action," "Date of Composition," "Early Editions," "Literary Illustrations" (notes explanatory of the text), "Glossary" (including grammatical usage and pronunciation), "Variorum Readings," and "Selected Criticism." The aim throughout these appendices is to furnish all the material needed for a critical reading of the play, and to provide in brief space a survey of the important theories, emendations, and interpretations of the long line of Shakespearean scholars. To this extent we regard the edition as a model of usefulness and skilful arrangement.

Of the introductions prefixed to the successive volumes of the "First Folio Shakespeare" we have spoken less certainly. They are ornamental rather than essential to the scheme of the undertaking, but we should have been glad to see more of the critical spirit in them and less sentiment. In the volume of the present instalment including the "Sonnets," we are glad to commend a satisfactory, and non-committal, treatment of the Southampton-Herbert discussion. The editor has done well also in setting forth the aspects of the "Sonnets" which take them out of the impersonal Renaissance tradition to which Sir Sidney Lee would relegate them, but we are not so sure that their theme is "the spiritual generation of immortality by the expression of love"—the phrase borders on that sentimentality of which we have before had reason to complain. As a whole, however, the work now completed is of a kind to reflect great credit on the editor.

Among recent new plays in London few have attracted more attention than "Rutherford and Son" (Doran), by a hitherto unknown dramatist, Githa Sowerby. There can be no question of its vigor, but it is not likely to win general popularity, except with the aid of some phenomenally fine performers. Its chief weakness is an unfortunate vagueness of purpose. John Rutherford is the head of glassworks on a cheerless moor in the North of England. He is the personification of remorseless, unscrupulous energy, wholly devoted to the establishment he has created. His one ambition is that "Rutherfords" shall exist and increase from generation to generation. To that end he thinks that his children should uncomplainingly devote their lives. His home is the dreariest of prisons, of which he is the tyrannical jailer. One son, Richard, leaves him to become a curate. The other, John, who has married a poor girl and is only tolerated because his infant son is the heir, is in silent rebellion. A daughter, Janet, embittered by years of domestic drudgery, seeks consolation in the arms of Martin, the trusted foreman of the works. Martin shares with young John Rutherford the secret of an accidentally discovered process which would mean incalculable profit. This secret the son hopes to sell to the father, but the old man claims possession of it as a right, induces Martin to surrender it and then incontinently discharges him, for his conduct with his daughter, Janet, whom he has already turned out of his house. Young John, a moral and intellectual weakling, maddened by the loss of his secret, robs his father's safe and flies, leaving his wife and babe behind, alone with the old man in the deserted house.

It is a tale of almost unmitigated gloom, illustrating the sacrifice of every redeeming human impulse to the Moloch of commercial pride. The only gleam of tenderness is in the final scene, where the lonely John Rutherford softens at the thought of the grandson, who is to succeed him. But the stern, unflinching realism of it grips the reader, and could not fail to be impressive upon the stage. In conception and execution there is nothing to suggest the feminine work, except perhaps the special intuition displayed in the notable sketch of the forlorn Janet, who is bereft of both father and lover by the operation of the very tyranny which she was seeking to escape. The dialogue is strong and characteristic, and the drab northern atmosphere perfect. It is seldom, indeed, that a first play is so mature in form, thought, and expression. Miss Sowerby's next work will be awaited with pleasurable expectation.

Speaking of Granville Barker's production of "Twelfth Night," at the Savoy Theatre, in London, the *Times* critic says, in part:

> It is a most agreeable sensation to feel that for once you are listening to Shakespeare as he wrote: to a Shakespeare who is being allowed to have his say out; and to perceive that you are enjoying it, and obviously all the other listeners are enjoying it, in a simple, natural, childlike way, without any need for make-believe or for appeal to the "historical sense." Mr. Ainley's Malvolio is, to our mind, much more reasonably Shakespearean—a quietly, if inordinately, conceited man, and no magnificent monster. His contempt for the world at large is dry and thin-lipped. His reproof to the roysterers at their midnight orgy is that of his mistress's faithful servant, shocked on her account, rather than that of a tyrant, outraged on his own. In short, a Malvolio played with propriety and tact; and, all the more for that, an entirely amusing figure. You find the same moderation in the drollery of Sir Toby and Sir Andrew, in the hands of Mr. Whitby and Mr. Quartermaine. Mr. Whitby knows how to be *half*-drunk, and Mr. Quartermaine how to be a man of breeding, though as big a fool as you please. Their friend, the fool *en titre*, being played by Mr. Hayden Coffin, sings, of course, with perfect taste--sings, indeed rather better than he talks; for Mr. Coffin is not yet quite word perfect.

Martin Harvey has lately acquired two new plays. The first is Edward Knoblauch's "The Faun," which Mr. Faversham has made well known in this country, and the second is a poetic drama by Laurence Binyon, which is based on the Arthurian legend of Lancelot and Guinevere. All that elaborate and tasteful mounting can do for a piece will be done. In the autumn of next year Mr. Harvey will bring his company to this country, to present "Œdipus Rex," in a few of the larger cities.

To their existing stock of plays Messrs. Vedrenne and Eadie have just added the German piece "Narrentanz" (The Fool's Dance), by Leo Birinski, which has been played already in this city. The name of the adapter remains a secret, nor has the English title yet been chosen. Messrs. Vedrenne and Eadie have further acquired a new comedy by Elizabeth Baker, author of 'Chains," named "Over a Garden Wall." The continued success of "Milestones" renders the time of the production of these pieces very indefinite.

According to a London critic, Marie Tempest has made a great success in "The Malingerer," a wordless play by Sidney Lewis-Ransom.

Music

History of the Philharmonic Society of London. Compiled by Miles Birket Foster. New York: John Lane Co. $4 net.

The Story of Bayreuth as Told in the Bayreuth Letters of Richard Wagner. Translated and edited by Caroline V. Kerr. Boston: Small, Maynard & Co. $2.50 net.

The Philharmonic Society of London is celebrating its centenary this year. Its history, particularly during the first six decades of its existence, is virtually the story of orchestral music in Europe, for it placed all countries under tribute for compositions, players, singers, and conductors; and while its policy has always been conservative, in the long run every school had its hearing. When it was founded, in the year in which Wagner and Verdi were born, London had no permanent orchestral society open to the public, for the Concert of Antient Music was really a private and amateur concern, and it had, moreover, a rule forbidding the performance of any music that was not at least twenty years old. The Philharmonic Society, on the contrary, made it a point not only to acquaint its patrons with recent productions at home and abroad, but specially requested prominent composers to write new works, for the privilege of the first performance of which it often offered large sums. Cherubini was commissioned to compose a new symphony, overture, and vocal piece, for £200. Spohr got 250 guineas for writing and conducting a new symphony. But it was towards Beethoven that the directors of the Philharmonic most conspicuously displayed their liberality. In 1815 they purchased of him the right of first performance of three overtures, for 75 guineas. Two years later an offer of 300 guineas was made to him to come and direct two symphonies to be composed by him for the Society. In 1825 the sum of fifty pounds was offered him for a MS. symphony; the money was sent, and so was the manuscript, but not until it had been performed in Vienna, contrary to the stipulations from London. However, the Philharmonic, at any rate, got what it has always since regarded as its chief treasure, the MS. of the Ninth, the greatest of all symphonic works, with the inscription, "Geschrieben für die Philharmonische Gesellschaft in London."

Mr. Foster has divided his book into ten parts, each part dealing with a decade, and each prefaced by a page or two of remarks calling attention to the principal events of the period. There are some 700 programmes, all printed here in full. A glance at those of the earliest concerts shows an odd carelessness in make-up, "Symphony, Beethoven," or "Quartet, Haydn," being all that was deemed necessary for the hearer's guidance. Analytical programmes were not introduced till 1869. The most important innovation of the first decade was the use of a bâton, by Spohr, who had crossed the Channel to conduct one of the concerts in 1820. Up to that time it had been customary to divide what are now the conductor's duties between the leading violinist, who, here and there, beat the time with his bow, and a pianist, who, with the score before him, corrected mistakes or filled up accidental omissions in the performance. Clumsy as this arrangement was, Spohr's introduction of the bâton and his assumption of full authority shocked the directors, some of whom protested against the revolutionary change; but the result was so satisfactory that his method was adopted, the man "at the pianoforte" being thenceforth called conductor, although the title "leader" died hard; it did not disappear entirely till 1846.

Mendelssohn takes an important place in the second and third decades. He played for the Society, conducted, composed symphonies and overtures, and was petted as few mortals have ever been. Though he recognized "the canker in its constitution—musical *rotten-boroughs, etc.*," he was usually in good humor. When Wagner became conductor in 1855 he wrote to a friend: "The directors continually referred me to what they called Mendelssohnian traditions, but I suspect that Mendelssohn simply acquiesced in the traditional ways of the Society." Once Mendelssohn lost his temper, threatening to withhold his own new overture because the musicians balked at a Schubert symphony. It is somewhat surprising that the editor makes no reference to this incident. He also quotes of Wagner's remarks on the Philharmonic only those that are favorable, excepting so far as its excessively long programmes are concerned, which made it impossible, with the time allotted for rehearsals, to do anything thoroughly.

Financially, the Society had its ups and downs, and it must have been at a very low ebb when it offered and gave Wagner only £200 for rehearsing and conducting a whole season's concerts, which contrasts startlingly with the former liberality toward Spohr, Beethoven, and others. At no time, however, though threatened with disaster, did it lower its ideal. The most serious charge it has to answer for is discrimination against certain great composers, which, to be sure, was due to the Handel-Mendelssohn atmosphere. The Slavic and Magyar airs of Chopin and Liszt have never made a strong appeal to British taste. It was not till 1843 that a Chopin concerto was played by the Philharmonic, and this, we are told, was the first performance in public of any of Chopin's music in England. Liszt fared much worse. As early as 1827 he played a Hummel concerto at a Philharmonic concert. In 1840 he was heard again, and got a piece of plate, valued at forty guineas, for his services. With Ole Bull he performed Beethoven's Kreutzer sonata, and solo pieces, and the ever-amusing critics, while praising his brilliant execution, "did not approve of his readings of Weber and Beethoven." The Marche Hongroise he played as one of his numbers was the only composition of his heard at these concerts till forty-two years later—four years before his death. Subsequently, this neglect was atoned for.

While Wagner was conducting the Philharmonic concerts in London he devoted his leisure hours to orchestrating the second of his four Nibelung operas. Five years previously he had already planned the building of a theatre for the special performance of this tetralogy. The details of the "Bayreuth Festival Idea," from its planning to the execution, are told in the volume edited by Caroline V. Kerr. The body of it consists of the letters written by Wagner to his four principal helpers, Feustel, Heckel, Carl Brandt, the famous stage machinist, and Theodor Muncker, burgomaster of Bayreuth. Wherever it seemed advisable, the editor has introduced a few pages of comment that make the story continuous. The letters are interesting, not only as illustrating Wagner's infinite patience in the attention to details, but as throwing light on the musical situation in general at that time. The narrative is carried on beyond the Nibelung festival to the first performances of "Parsifal" in 1882, and is followed by interesting extracts from the reminiscences of Winkelmann, Wolzogen, and others, which, like these letters, have never before been presented in English. It is a book which every collector of Wagneriana should have in his library.

Among recent Schirmer publications are six songs by Kurt Schindler, printed as "Three Sonnets of Mediæval Italy" and "Three English Songs."

The Paris *Gaulois* has been collecting the opinion of various composers as to which is Massenet's greatest work. None of them mentioned his most inspired work, "The Juggler of Notre Dame." Bruneau, Xavier, Leroux, and Nougues proclaim their preference for "Werther," while Georges Huë couples "Manon" and the work already mentioned; Paul Vidal rates "Marie-Magdeleine" as the late composer's highest achievement; Puccini—as might, perhaps, have been expected—votes for "Manon," whereas the veteran Charles

Lecocq has given his opinion in favor of "Thaïs."

THE COMING OF LITHOGRAPHY.

LONDON, November 23.

That the members of the Senefelder Club are holding their fourth annual exhibition in London (this year at the Stafford Gallery) is a fact worth recording. For long it seemed so hopeless to obtain due recognition for lithography as an art that many artists, at first enthusiastic, have been discouraged from practicing it. But this small group of lithographers, who founded a society in honor of Senefelder and his invention, have already succeeded in showing, as no one has ever hitherto shown, that lithography ranks with, or even above, etching as an original method of expression for the artist and a subject of interest for the collector. Indeed, it is a much more autographic, much more direct means of expression than etching or any other medium for the multiplication of an artist's designs.

It should seem as if this simple and obvious fact could not have been so completely overlooked by the public—it never was by the artist—in the century and more since the art was invented. But in the beginning, in the great days of the popularity of lithography—about 1830—it was used chiefly for the purpose of illustration. It made its appeal to the publisher by its cheapness and by what at that period of wood-engraving appeared to him the marvellous rapidity with which the drawings, done on stone, or transfer paper, could be prepared for printing. The wood-engraver lingered weeks, or months, over his block; once the drawing was on the stone, it required but the simplest, the shortest process before the stone could be handed to the printer. The art appealed to the artist by its simplicity and directness and freedom—it helped him to escape from the engraver, who cut his work to pieces on the block; it left him at the mercy only of the printer, who, at the worst and single-handed, was never quite so pitiless as the wood-engraver. It is no wonder that artists who wished to multiply their designs accepted the new art eagerly.

But almost all this early work, great as much of it was, was issued in books and magazines and papers got up in the cheapest sort of fashion and published by the hundreds and the thousands. Sometimes there were a few artists' proofs, but these were the exception, and the usual prints were pulled on cheap paper by the professional printer, who had to turn out so many an hour if he would not lose his job. The results were surprisingly good, it is true, but this was not the way to obtain fine prints. In the course of time, too, the cheapness of production, as it is very likely to do in every case, lowered the standard. Then came the chromo-lithograph, and the commercial lithographer, and the trade-union, and the very name of lithography passed into a reproach.

In the nineties there was a serious effort to revive it. The hundredth anniversary of Senefelder's invention was approaching, and a retrospective exhibition was prepared by the French, who had done the most to make lithography worth remembering. Lithographs began to reappear in the Salon. Lithographers in London, publishers in Paris, endeavored to draw artists back to the method which, fifty or sixty years earlier, had yielded such splendid results. Every one knows what was accomplished at this time by Whistler and Fantin-Latour, what noble experiments were made by Carrière and Besnard and a host of others in France. Even in England the Royal Academy woke up to the fact that some sort of a movement was going on, and before the French show opened Leighton had induced several Academicians to do a drawing or so on the stone or transfer paper, in many cases the one lithograph they ever made. The show naturally attracted world-wide attention, with its list of great names and array of great work. For a while it looked as if lithography were on its feet again. But it was no use. People would not buy lithographs; they could not forget the tradition of their cheapness, they missed the plate-mark they had been trained to look for in the etching, and so suspected a fraud somewhere.

It explains the fascination lithography has for the artist that, after this failure, still another effort should have been made to revive it. But the new revival is based upon a firmer foundation. The artist has at last learned that he is not dependent upon the commercial lithographer and the professional printer, and he has rebelled against the limitations, technical and financial, which they imposed upon him. He has learned how to transfer for himself the drawing from the paper to the stone, how to etch the stone, how to print it. He has learned how to get his own effects in his own fashion.

The new life his emancipation has brought to the art may be seen in this year's show of the Senefelder Club at the Stafford Gallery. The work of some of the last generation of lithographers is included: Whistler, Gauguin, Félicien Rops, Carrière, Toulouse-Lautrec, masters all of them. But more space is devoted to the men of the present generation—men of several nationalities and many methods: Louis Legrand, Lunois, Brangwyn, C. H. Shannon, John Copley, Spenser Pryse, Hatrick, Hamilton, Joseph Pennell, to mention a few.

You can see in one impression the delicate grays that were all Whistler, who never printed for himself, thought he could ask of the stone; in another, the deepest, richest, most sonorous blacks. One member may continue faithful to the uniform woolliness beloved by the professional, another work in pure line, a third carry out his design with every gradation of tone from solid black to the gray that fades into white. A few prints are in color. It is extraordinary what variety is to be had from so simple a medium. And everywhere is the freshness, the vitality that comes with genuine interest and intelligent experiment. Further to rid themselves of the commercial element, the members of the Club—whatever the invited exhibitors may do—limit their editions to fifty, though some exhaust the stone long before that number is reached. Altogether, there is every reason to believe that the art of lithography is at last coming into its own and will fill the high position it lost, at first from its abused popularity, afterwards from its commercial degradation.

N. N.

In a special autumn number, "Peasant Art in Russia," the *International Studio* (Lane), follows up the vein it has opened in Austria and Scandinavia. The articles are written by Russian experts under the editorship of Charles Holme. Besides the cuts of objects of art, some in colors, there are numerous interesting pictures of costumed peasants about their work and festivities. Perhaps the most beautiful objects are woodcarvings—spindle-heads, sledges, etc.—and the semi-Oriental tapestries of the Ukraine, which show an eclectic preference for Caucasian, Persian, and Mongol motives.

The "By-Paths in Collecting" (Century), through which Virginia Robie undertakes to guide amateur collectors, are for the most part well trodden and familiar. Yet the chatty, informal style of the book is very readable. Ceramic excursions predominate; there are also chapters on old pianos, samplers, pewter, and sun dials. The information imparted with no pretence of historical sequence is usually accurate. An unwarranted generalization here and there is noted, as in this: "When Dr. Wall founded the pottery works [at Worcester] which were to take such high rank in ceramic annals, he had no other motive in view than to cope with the Chinese trade." R. L. Hobson in his monograph on Worcester makes the more interesting explanation that one of the leading motives of its foundation was to bring to the city a body of skilled artisans, who would "furnish a solid voting contingent in the Whig interest." The justness of the strictures of alleged "forgeries" of the Dr. Syntax series might be questioned: some at least of the new Dr. Syntax plates have been issued in all apparent honesty by the very Adams house which in the early nineteenth century made a specialty of ceramics for the American market. The general excellence of the book would excuse more vital slips than these. The volume is dedicated "without permission to all collectors", only a captious collector would have refused permission if asked.

Finance

TWENTY PER CENT. MONEY.

Three noteworthy incidents in the money market—each of an unusual character, each bearing directly on some phase of the present financial situation, and all connected closely with one another—have occurred within the past week. One was the rise in rates for loans on Wall Street, subject to repayment on demand, to 20 per cent. per annum; the highest since the closing week of 1907, when panic influences were still ascendant, banks had not yet resumed full cash payments, currency was at a premium in bank-checks, and New York bank reserves were $20,000,000 below the lawful ratio to deposits. The second incident was a fall in New York exchange on London to 4.84½, a rate lower than any touched since 1907. The third was Saturday's announcement of a $5,000,000 deficit in New York bank reserves—something which has occurred in only three other weeks since the beginning of 1908.

The high "call money rate" applied to Stock Exchange borrowers. That such a rate as 20 per cent. should have been possible, in the face of the usury law, is due to the exemption, under that law, of loans which either borrower or lender may terminate at any moment. Six per cent. is the legal maximum for loans with a stipulated term to run, but the exemption in favor of "call loans" was incorporated in the statute with the proper purpose of leaving the door open for recourse in emergencies. In the present instance, outside banks, which had been lending heavily on the financial market, were moved by their home requirements to call in such loans, and the 20 per cent. bid measured the inducement which Wall Street borrowers had to offer, in order to retain the out-of-town money and avoid the forced sale of the securities held through it.

The acuteness of the past week's money stringency hit the Stock Exchange hardest, not because of undue expansion there—on the contrary, stock speculation has been exceptionally restrained this season—but because other borrowers had placed their loans on time, and could not be disturbed. Ordinarily, such a situation would be met through large importation of gold from Europe. This would indeed have been especially natural on this occasion, since the tightness of our money market is primarily due to harvesting and marketing the unprecedentedly large crops.

As a matter of fact, our bankers did begin in September to import European gold in considerable amounts, and the foreign exchange market has since then moved even more decidedly in this country's favor. But the Balkan war broke out in October; money tightened on all European markets, and every European bank, in the face of the doubtful political horizon, proceeded to guard its stock of gold. The gold importations therefore ceased. So singular a conjuncture of events suggests some larger considerations in the American part of the situation.

Twenty per cent. call money cannot be assigned, as a 6 per cent. rate occasionally is, merely to the rôle of an "index of prosperity." Advocates of currency reform are in the habit of laying responsibility for such abnormal rates on the existing scheme of banknote issues. That is a bit far-fetched, since the capital defect of the present system is that, so long as the public debt is not being rapidly redeemed, it operates generally towards chronic expansion of the currency, and therefore can hardly cause such tight-money incidents as this.

But the criticism that, even if the present banking system did not cause the trouble, it provides no means of alleviation, is likely to have more force this time than it had half a dozen years ago—for instance, when Mr. Schiff made the 125 per cent. call money rate of December, 1905, his text for similar criticism. The case was not so clear, either that year or the year after, because the acute stringency of the period was then a direct and immediate result of the mischievous activities of powerful banks and powerful capitalists affiliated with them. Their reckless misuse of the market's credit facilities, on a prodigious scale and to help out infatuated Stock Exchange speculations of their own, was certainly the primary cause of our acute money stringency of the day, and would probably have made trouble under any currency system. That even Mr. Aldrich had to amend and re-amend his banking plan with a view to providing against "Wall Street control," was due to the public suspicion, which cannot be pronounced altogether unreasonable, that people who had played such tricks with the credit machinery under one system might do it even more effectively under another. The country has those wealthy adventurers chiefly to thank for the subsequent deadlock in currency reform.

But no such qualifying considerations surround the present episode. The promoters and the speculators have been a negligible influence. The Stock Exchange itself has been perhaps the most conservative part of the season's business organism. There has been no such mountain of "American finance paper" in Europe as used to call forth the warnings, and finally the aggressive veto, of the Bank of England in 1905 and 1906. Whatever the cause of the present week's 20 per cent. money rate, it is not that.

The cause is generally conceded to be the sudden and great activity in American trade, with unusually large demands on banking accommodation, coming at an hour when the normal and habitual providing of credit facilities and gold by Europe in anticipation of its import of agricultural staples from us was obstructed by the foreign political disturbances and money hoarding. This was a case for scientific banking. It can hardly be doubted that a centralized credit institution in this country, managed by competent and distinterested financiers and able to take over loans from banks which had too much to care for, would have served an invaluable purpose.

On those general lines, the question will sooner or later have to be dealt with. This season has provided a fair test of our system of "shifting loans" to interior banks—which has meant, as usual, that when the money rate was high enough to induce them to do so, those institutions would lay hands on their own out-of-town reserve and toss it into the money market in the form of loans. They were already probably allowed to count as "lawful reserve" too large a portion of these balances in other cities. When they proceeded to strip themselves of such re-deposited reserves, for the sake of a 6 or 9 per cent. interest rate, they were bound to wake up before very long, in a season when demand from their own home customers was active, to the discovery that their reserve was heavily impaired. When such discoveries are made, the interior lenders promptly pull out the planks from under the New York market, and then we have 20 per cent. money.

The vice of the present system is not primarily the issue of bond-secured banknote currency. The real source of evil is the lack, when Europe is financially tied up, of any place for American banks to go, with any assurance of continuing credit facilities, for rediscount of loans which have accumulated beyond the power of their own cash reserve to sustain with observance of the law.

BOOKS FOR CHRISTMAS

PRESENTS OF PERMANENT VALUE TO SUIT ALL TASTES AND ALL PURSES

This advertisement presents but a few of our Representative Titles. It is not practicable to do justice to these books in the space available in this issue of The Nation. Our New Illustrated Catalogue (48 pages) describing nearly four hundred books for presents will be mailed on request.

The Story of the Bronx

By **STEPHEN JENKINS**, Author of "The Greatest Street in the World—Broadway." 8°. With over 100 Illustrations and Maps. **$3.50 net.**

From the purchase made by the Dutch from the Indians in 1639 to the present day.

In the Amazon Jungle

By **ALGOT LANGE.** With an Introduction by F. S. Dellenbaugh. 8°. With 86 Illustrations from Original Photographs. **$2.50 net.**

Extraordinary adventures in a remote part of the upper Amazon River, including a sojourn among the cannibal Indians.

The Japanese Nation

ITS LAND, ITS PEOPLE, AND ITS LIFE. With special consideration to its relations with the United States. **By INAZO NITOBE. $1.50 net.**

A thorough study of Japan by one of her foremost scholars.

A Beginner's Star Book

By **KELVIN McKREADY.** With Charts of the Moon, Tables of the Planets, and Star-Maps on a New Plan. 70 Illustrations. Square 8°. **$2.50 net.**

An easy guide to the stars and to the astronomical uses of the opera-glass, the field-glass, and the telescope. A Baedeker for the sky.

The Diaries of William Charles Macready

1833-1851

Edited by **WILLIAM CHARLES TOYNBEE.** 8°. 2 vols. **$7.50 net.**

In a style full of candor the author speaks of the stage rivals and illustrious contemporaries with whom he came in contact.

Kings and Gods of Egypt

By **ALEXANDER MORET,** Author of "In the Time of the Pharaohs." 8°. With 20 Illustrations. **$2.00 net.**

A popular account of some of the most representative figures in Egyptian history and worship.

The Romance of Leonardo da Vinci

By **DMITRI MEREJKOWSKI.** New edition. 2 vols., with 64 Illustrations. 8°. **$5.00 net.**

Reproduces with astonishing skill the atmosphere of the Renaissance.

Thy Rod and Thy Staff

By **ARTHUR CHRISTOPHER BENSON.** 12°. **$1.50 net.**

A delightful essayist whose critical writings rank among the best.

The Hoosac Valley

Its Legends and Its History

By **GRACE GREYLOCK NILES.** 8°. With 110 Illustrations and 3 Maps. **$3.50 net.**

An abundance of material hitherto uncollected and also profuse illustrations of Revolutionary heroes and historic spots.

The Poetical Works of

William Henry Drummond

New Edition. Bible Paper. With Portrait in Photogravure. Cloth, gilt. **$2.50 net.** Full leather, gilt. **$3.50 net.**

The complete poems of the great Canadian "Habitant" poet.

Romance of the French Chateaux

Feudal—Renaissance—Bourbon

By **ELIZABETH W. CHAMPNEY.** 2 vols. 8°. With 22 Photogravure and 94 other Illustrations. **$6.00 net.**

A delightful blending of history, art and romance.

Colonial Homesteads and Their Stories

By **MARION HARLAND.** 8°. 167 Illustrations. **$3.50 net.**

The traditions and historical associations that cluster about the old family estates founded by notable Americans of the Colonial period.

NEW BOOKS

THE UNIVERSITY OF CHICAGO PRESS

The Courts, The Constitution, and Parties

Studies in Constitutional History and Politics. By ANDREW C. MCLAUGHLIN, Professor of History in the University of Chicago.

The work consists of five papers, the first of which discusses the power of a court to declare a law unconstitutional. Two deal with the growth and essential character of political parties, and are followed by one on the history of differing theories of the Federal Union. The work fittingly concludes with a discussion of the written constitution in some of its historical aspects. 308 *pages*, 12*mo*, *cloth*, *postpaid*, $1.63.

American Poems

Selected and edited with illustrative and explanatory notes and bibliographies. By WALTER C. BRONSON, Professor of English Literature, Brown University.

The book offers a most carefully chosen and well balanced presentation of the poetic works of Americans, covering the entire period of our history. For the teacher as well as the student the value of the work is greatly enhanced by the comprehensive Notes, Bibliography, Glossary, and Index. It is believed that the book will have the wide popularity of Mr. Bronson's earlier collection, English Poems, which has been adopted by all leading American colleges. 680 *pages*, 12*mo*, *cloth*, *postpaid*, $1.68.

The Minister and the Boy

By ALLAN HOBEN, Associate Professor of Homiletics in the Divinity School of the University of Chicago.

From the first chapter on "The Call of Boyhood," through one on "The Approach to Boyhood," the author leads us by suggestion and informing principles to realize the enormous opportunity afforded by the raw material, "boy," on which the minister may work. Later chapters on play and vocational choice show how to train the boy for citizenship, how responsive he is to the right sort of impetus, and how his religious life may indirectly, and even unconsciously, be stimulated by the proper appeal to his manly instincts, while furnishing him with a normal outlet for his natural enthusiasm.
Illustrated, 180 *pages*, 12*mo*, *cloth*, *postpaid*, $1.10.

Romantic Days in the Early Republic

By MARY CAROLINE CRAWFORD

AN INSTANT SUCCESS: BY THE NOBEL PRIZE WINNER

GERHART HAUPTMANN'S

Atlantis

Like many classics, this novel (just published) will interest people for different reasons; some will care for its narrative, to others it will appeal because of its symbolism, and again there are those who will respond primarily to its psychology. The dual nature of the hero attempts to attune itself to conflicting influences; it is the old struggle between the spirit and the flesh. A pen sensitive to the nuances of life describes the gaieties of an ocean voyage, the thrilling tragedy of a sinking vessel, the sordid side of the theatre in New York, and the forces—virtue, hypocrisy, art, puritanism—that contribute to the spirit of America.

(*Translated by Adele and Thomas Seltzer.*) $1.50 *net; by mail*, $1.62.

GERHART HAUPTMANN'S

Dramas, Volume I

(Edited by Ludwig Lewisohn)

Containing INTRODUCTION BY THE EDITOR

BEFORE DAWN	THE BEAVER COAT
THE WEAVERS	THE CONFLAGRATION

The complete edition which this inaugurates is authorized by Hauptmann and published with his coöperation. English speaking readers may at last study the entire dramatic works of the greatest living Continental dramatist. Volume I (about 700 pages) ready in December. Other volumes in preparation. Order in advance. $1.50 *net; by mail*, $1.65.

A MESSAGE FROM THE GREATEST LIVING SCULPTOR

AUGUSTE RODIN'S

Venus:

To the Venus of Melos

The greatest sculptor in modern times pays tribute to the greatest relic of Greek art. It is at once an eloquent prose poem and a confession of artistic principles. A beautifully made book; an ideal gift. Authorized edition. (*Translated by Dorothy Dudley.*) *Portrait and other illustrations.*
50 *cents net; by mail, 55 cents.*

B. W. HUEBSCH, Publisher, 225 Fifth ave., New York

"In this fascinating new book of pictures and text about the majestic western mountains, the author's descriptive power rises equal to his task of painting on a grand scale what the hand of God has so magnificently laid out. He sees the geological ages at work, uptilting here an ocean bed, folding the earth's crust, molding colossal mountain barriers, planting the forests. Nor does he forbear to note those earliest human associations which have invested the scene with the poetry of myth. Fascinating are the Indian legends whereby the bronze aborigines accounted for the marvels that thrilled their primitive imagination. . . . Especially interesting is the story of the birth of the great mountains, told in the author's eloquent and graphic text."—*Louisville Courier-Journal*.

THE GUARDIANS OF THE COLUMBIA

By JOHN H. WILLIAMS

Uniform in size, styles and prices with "THE MOUNTAIN THAT WAS 'GOD'" (Mt. Rainier-Tacoma), by the same author.

Large 8vo, with 210 illustrations (eight in colors) of Mts. Hood, Adams and St. Helens. EDITION DE LUXE, in flexible leather, boxed, $2.50 *net*; LIBRARY EDITION, cloth, $1.50 *net*. Postage 16 cents extra.

"An unusual book, profusely and remarkably illustrated; a delightful book."—*Springfield Republican.*

"Mr. Williams knows the country so well and writes of it so intimately that it is not surprising his former descriptive work ('The Mountain that Was "God"') sold 45,000 copies in less than two years. The student of nature's wonderful spectacles will find in this most handsome and reliable new book a source of much enjoyment."—*Detroit News.*

"By issuing these two volumes on the mountains and forests of our Northwest, Mr. Williams has rendered a service of great value to all nature-loving Americans. It is possible to be fresh from a sojourn in face of the Matterhorn and the glacial wonders of the Gorner Grat, climax of scenic Switzerland, and still be awed and thrilled at the mere sight of the pictures of Mt. Tacoma (Rainier) and the three guardians of the Columbia River—Mts. Hood, Adams, and St. Helens—included in these books. . . . Mr. Williams's pictures and descriptions are perhaps the strongest argument ever brought forward in favor of the exhortation, 'See America, Too.'"—*N. Y. Evening Post.*

Address, J. H. WILLIAMS, Publisher,
938 Pacific Ave., Tacoma, Wash.

The Mosher Books Catalogue

A BEAUTIFULLY proportioned octavo, in old rose wrappers, is sent without charge to all who are interested in choice editions at moderate prices.

The Open Secret

A Study of Life's Deeper Forces

BY

James T. Bixby, Ph.D.,

Author of "THE NEW WORLD AND THE NEW THOUGHT," "THE ETHICS OF EVOLUTION," "RELIGION AND SCIENCE AS ALLIES," ETC.

A searching study of the motive power which lies behind the mechanism of the universe, the Omnipotent and Omniscient Life which is guiding and controlling the world, not by chance or caprice, but in a far better way—by invariable laws. But while the laws of nature are general and cannot be altered to satisfy the wishes of particular persons, yet to a considerable extent the individual has freedom of will so that he need not be dominated by circumstance or environment, but may, if he will, aid in the progress of the world; for the universe is still in the making and to accomplish his divine purpose God depends largely upon man.

The book, therefore, is one of practical and helpful application, to the writing of which Dr. Bixby has brought the acumen of his ripe scholarship and the results of his profound yet lucid thought. He seeks to show the rationality of his belief, not only by positive arguments, but also by refutation of the arguments which have been set forth by prominent philosophers and scientists holding different opinions regarding God and the problem of life.

LANE'S HOLIDAY BOOKS

TAPESTRIES: THEIR ORIGIN, HISTORY, AND RENAISSANCE. By GEORGE LELAND HUNTER.

This is a fascinating book on a fascinating subject. It is written by a scholar whose passion for accuracy did not prevent him from making a story easy to read. The book is indispensable to lovers of art and literature in general, as well as to tapestry amateurs, owners and dealers.

With four full-page plates in color and 150 half-tone engravings. Cloth. $5.00 net; postage 25 cts.

FAMOUS PICTURES OF REAL BOYS AND GIRLS. By L. M. BRYANT, author of "Pictures and Their Painters," "What Pictures to See in Europe in One Summer," etc.

The author begins with events that happened several hundred years ago and comes down to incidents of to-day, gathering the stories from Italy, Spain, Germany, Holland, Belgium, France, England and America.

Fully illustrated. Cloth. $1.25 net; postage 12 cents.

THE JOYOUS ADVENTURES OF ARISTIDE PUJOL. By WILLIAM J. LOCKE, author of "The Glory of Clementina," "The Beloved Vagabond," "The Morals of Marcus Ordeyne," etc.

Aristide Pujol is a most attractive personality. With breathless interest we follow him through a career as disconnected as a pack of cards, and with a chuckle and a sigh of regret we close the book on his last adventure—that of matrimony.

With illustrations by Alec Ball. Cloth. $1.30 net; postage 12 cents.

THE CAREER OF BEAUTY DARLING. By DOLF WYLLARDE, author of "The Story of Eden," "An Unofficial Honeymoon," etc.

A startling story of the career of a beautiful girl who, after a hard struggle and many thrilling experiences, became a star of the stage.

Cloth. $1.30 net; postage 12 cents.

THE GOLDFISH. By JULIAN STREET, author of "The Need of Change," "Paris à la Carte," "Ship Bored," etc.

The story shows how, by the aid of a goldfish, a small boy was able to obtain the desire of his heart—a youthful companion and playmate.

With colored illustrations and page decorations. Cloth. 70 cents net; postage 6 cents.

The Ethics of the Old Testament

By HINCKLEY G. MITCHELL
Professor of Hebrew and Old Testament Exegesis in Tufts College

The aim of the author is to present a faithful and, as nearly as possible within the limits of a manual, a comprehensive view of the development of ethical ideas among the Chosen People. To this end he takes the books, or parts of books, of the Old Testament in the order of their origin, so far as their dates can be determined, and discusses their teaching, whether direct or indirect, on the duties that men owe to themselves, their families, and the larger world of which they are a part. In most cases the survey is exhaustive. The care and patience required to make it so can only be appreciated by one who attempts to verify the passages, literally thousands in number, that are cited in the notes. This is the first volume to be issued in the series of "Handbooks of Ethics and Religion," edited by Shailer Mathews.

CHARLES SCRIBNER'S SONS 153 FIFTH AVE., NEW YORK

The Nation

NEW YORK, THURSDAY, DECEMBER 12, 1912.

The Week

The complete election figures from Idaho are eloquent of what might be called the voting temperament of the normal American. For President, a total of 104,000 votes was cast. For members of Congress, the vote was 96,000. For Governor, it was 92,000. For other State officers, it was 87,000. On the question of the adoption of the initiative and referendum, only 58,000 voters expressed themselves, and only 51,000 on the recall. Thus, in an election in which it might be thought more difficult than usual for the voter to make up his mind whom to vote for as President, more than twice as many electors took the trouble to do this as cared whether their power over officials was or was not extended; and of every five who voted for President, not quite three had enough interest in the subject of direct legislation to say either yes or no to the question whether they wanted it or not. Measures, not men, is a time-honored cry, but it does not need the citing of figures to prove that, ordinarily, it is men rather than measures that fill the public eye. One almost gets the impression that the hurried sovereign in the voting-booth would like to make a mark opposite the name of the Presidential candidate of his choice, and let it go at that.

All that Chairman Underwood has had publicly to say about the coming revision of the tariff is marked by good sense. It hits off, too, we make no question, the general desire in this business. The work is to be done. It is to be done with as much thoroughness as possible, but, above all, with dispatch. With this latter requisite in mind Mr. Underwood proposes to begin tariff hearings early in January. That would make it possible to get the preliminaries out of the way before the extra session of Congress is called. Indeed, there seems to be no reason why the chief tariff bills should not be prepared in advance, and be ready for introduction as soon as the new Congress is organized. The forms of procedure in this affair are of small consequence. What is essential is to get the thing done and out of the way.

Future historians may be tempted to define the Progressive party as a party which early in its career got the habit of going to Chicago and never quite lost it. For many Progressives on the "Bull Moose special" which left New York on Sunday this was the third trip within half a year. They went to Chicago in June to nominate the Colonel, and failed. They went there again in August, and succeeded. They have gone there in December to say they are glad they did it. There is a story about an applicant for United States citizenship who was asked whether he was a Socialist, and replied yes; he believed in going out with his friends and having a pleasant social time. What with its conferences and its junketings and its post-election banquets the new party of social justice seems to be having a nice social time of it. We are glad that this is so. Too many radical parties are apt to behave as if the state of things against which they are protesting had turned this world into a vale of tears. There is no sackcloth and ashes about the Bull Moose leaders. While working to make this country a better place for their children, they manage to get a bit of fun out of it for themselves.

Attorney-General Wickersham's admission, in his annual report, that "the experience of the last year in endeavoring to enforce criminal liability under the Sherman law has not been encouraging," must not be construed as meaning more than it says. Nor is the whole history of the enforcement of the Sherman act, in connection with the great combinations that have been declared unlawful or guilty of unlawful practices, to be taken as demonstrating the impotency of the law on its criminal side. Even where crimes are of a far simpler nature, the fact of long-continued immunity for big offenders is no proof of the permanence of such immunity; the time comes when the sleeping forces of the law are thoroughly awakened. But in the case of the Anti-Trust law there has been the additional circumstance that the line between legal guilt and legal innocence was, in many instances, hard to draw. It goes counter to the sense of justice to put men in prison for having done what many perfectly honest and highly intelligent people regarded as permissible under the law. A condition precedent to making the Anti-Trust act a workable criminal law was that the intent of the law, as understood by the courts, should be made plain enough to serve as an effective warning.

Whether one believes in the Secretary of the Navy's jingo demand for three new battleships and all sorts of minor vessels or not, it is undeniable that the progress of the navy in the matter of efficient administration has been marked these last few years, and that this will redound to Secretary Meyer's credit. Thus, in his annual report, he records the fact that all assignments of captains and admirals are now made by the Secretary only after the full council of the Aides of the Secretary has reviewed the records of the officers available and, from personal knowledge of the men concerned, picked them for the various duties. There was a time when the question whether you went to sea or not, and, if so, what ship you obtained, depended upon how well you stood with the Chief of the Bureau of Navigation. The establishment of the Aides (for operations, personnel, material, and inspection) is another achievement of Mr. Meyer's which has done much to coördinate the service. Under him the Aides and bureau chiefs meet once a month in the Secretary's office for consultation; and in order to standardize the work of the navy yards their commandants meet monthly on the Atlantic and Pacific coasts and annually in Washington. We believe that Mr. Meyer is largely justified in saying that "the business of the navy is now being conducted with a minimum expenditure while maintaining the highest efficiency of the fleet."

Representative Pujo's project of dealing with the sins of high finance by the delightfully simple expedient of shutting it out of the mails need not be taken seriously. But the fact that it need not be taken seriously is itself a very serious matter. A more difficult question to deal with than the problem presented by the concentration of financial power, and especially control over business credit, does not exist. Few will deny that there is here a real evil, though there are the widest possible differences of opinion not only as to what can be done about it, but also as to its extent. The question is not peculiar to our own country, though it is more acute with us than elsewhere. It has long been engaging serious attention in Germany, and was the subject of prolonged discussion in the sessions of the great Commission on banking laws held in that country in 1908 and 1909. But if anything is to be accomplished, the problem must be studied by competent minds, and its legislative aspects dealt with by men of good judgment, of clear purpose, and controlled by a sober sense of responsibility. That the chairman of the Congressional subcommittee in charge of the question should be capable of making so childish a proposal as this of Mr. Pujo is at once laughable and melancholy.

Philadelphia and Pennsylvania are in for an unusual amount of Constitutional agitation, if not of Constitutional alteration. The Legislative Committee of the Republican State Convention has declared for a Constitutional Convention, nothing less radical being sufficient to carry out the proposals of the Flinn Convention of last summer. They include the initiative, referendum, and recall, regulation of conditions of labor, workingmen's compensation and employers' liability, reform of the judicial system, increase in the borrowing capacity of cities, and municipal ownership. Pennsylvania's present Constitution dates from 1873, although it has been amended three times since 1900. For Philadelphia, the Committee of Seventy proposes, not commission government, but an approach to it by setting up a single councilmanic chamber, the number of councilmen being reduced to fifteen, these to be elected not from wards, but on a general ticket. It is the contention of those who are advocating this change that, while the Mayoralty has been redeemed from the spoilsmen by the simple process of choosing an honest Mayor, he is hampered by the ward bosses operating through their creatures in Common and Select Councils. The proposed reform is a step further in the line of the principle of the Bullitt Charter—the concentration of responsibility.

One feels that a new verb should be added to English, "to blease." This would mean doing a great number of obnoxious things at the same time or in quick succession, as, for instance, invoking the sacred name of the law and the starry flag in one breath and inciting to murder in the next; exalting the chivalry of Southern manhood as exerted in the defence of woman's honor, and sending women shamefaced out of the room by the foulness of one's language; uttering loud cries in defence of the misunderstood, mistreated Southland, and making other Southern Governors writhe in their seats with disgust. "To blease" is a veritable treasure-house of onomatopœia. It immediately suggests a host of other expressive verbs: to blow, to bleat, to scream, to wheeze, to blab. It is eminently adapted to describe the act of raising clouds of dust, getting red in the face, threatening to have a man's life, defying heaven, the lightning, and the dispensary laws of one's State. To the press associations the new verb would bring untold savings. Instead of sending out column dispatches, a newspaper correspondent would merely have to wire, "He bleases again."

What a child labor law means is brought out with especial vividness by the statement that, as a result of the raising of the age limit for child workers in Maryland from twelve to fourteen years, more than 2,000 new pupils are expected to be enrolled in the schools of Baltimore. Above a thousand of these are boys and girls who will exchange the shop for the school-room. The rest, who are between the ages of thirteen years three months and fourteen years, will be allowed to continue at work, provided they attend night school. This procedure is necessitated by the lack of room in the day schools. The net result is a gain of two years in educational training for these two regiments of children. The mere picture of rows of boys and girls sitting or standing behind machines, and the same boys and girls in school-rooms, would appear to be argument enough for legislation preventing child labor.

Coincident with Secretary Wilson's announcement last week that the corn crop was the largest in the history of the country, came publication of the result of several years' investigation by medical experts, correcting the widely spread notion that pellagra is a form of chronic poisoning caused by eating damaged maize. Members of the Thompson-MacFadden Pellagra Commission here arrived at the same conclusion as did the London hospital authorities with regard to pellagra, namely, that it is a germ disease conveyed by insects—probably the buffalo gnat, a midge which frequents running streams as mosquitoes do stagnant water. From an English point of view, the study of pellagra has become important. The disease is endemically prevalent in Great Britain, and last week the first certificate of death from it was issued in a London hospital. Prof. Louis Sambon, of the London School of Tropical Medicine, and Dr. Albert Chalmers were credited by the English press with having discovered the true nature of pellagra, their researches having extended throughout Italy and those parts of Great Britain where it was to be found. Capt. Joseph F. Seiler, Medical Corps, U. S. A., a member of the Thompson-MacFadden Commission, was with Professor Sambon during his earlier field work, and may have directed the attention of his colleagues at Spartanburg, S. C., to the new theory.

Wisconsin's new lecture course in football will have certain advantages over the traditional parts of the curriculum. Dealing with "live" subject-matter, it will free the instructor from the necessity of awakening interest by the devices to which the professor of mediæval history, for instance, is driven. It is true that the new course does not meet the highest requirement now demanded of a college study: it is not vocational, except for such of its members as may be ambitious to serve their day and generation as football coaches. Nor is it altogether free of the charge of being theoretical, since it is to deal with the history of the game, as well as with the methods of play. But no one is likely to damn it with the epithet of "cultural"; it will hardly commit the unpardonable sin of forcing students to enter the unfamiliar and forbidding precincts of a library; and, best of all, it will give its members that consciousness of devotion to real issues that makes so tremendously for a serious attitude towards one's work. Is there not in the offering of this course a hint for all fossilized professors? Let them consider the effect upon the size and interest of their classes of the announcement that hereafter a large number of the lectures in the course in Greek history will be delivered on the athletic field, where the games and sports of the ancients will be illustrated by modern athletes in classic costume.

Canada's Christmas present to the mother country will be three Dreadnoughts, if the programme outlined by Premier Borden in Parliament last week is carried through without modification. The principle that Canada should coöperate with Great Britain for the naval defence of the Empire has been accepted by all parties in the Dominion. Sir Wilfrid Laurier was one of its most ardent advocates. But there are very important differences of opinion as to the proper size of Canada's contribution and the exact form it should take. The French-Canadian element, headed by Mr. Bourassa, is opposed to the idea of presenting battleships to Great Britain. It favors a home navy, and one consisting of small fighting units adapted for home defence. Premier Borden's policy differs radically from this position. Already there has been a break within the Government's ranks on the question, and Mr. Monk, who represented the Bourassa element in the Cabinet, resigned some time ago. Although it is Premier Borden's plan that the Canadian Dreadnoughts shall be built in England and retained in English waters as an integral part of the Imperial fleet, he asserts that Canada's contribution will enable the British navy to keep a more watchful eye on the over-sea dominions than it has done these last half-dozen years. The Dreadnought reinforcement will presumably spare for colonial service some of the older battleships or the lighter cruisers which are not counted in the first line of battle. But it is doubtful whether any fighting unit of value will be sacrificed by the home authorities under the established conception of naval strategy.

Little that is new was to be expected in the arguments of the formal British protest, in the matter of the interpretation of the Hay-Pauncefote treaty, filed with the Department of State on Monday. The case has before been thoroughly debated; and the English law officers of the Crown could only arrange and state the familiar points. This they do, however, with much force. Their spirit, too, is quiet. The tone is pitched low. There is no hectoring or ultimatum-hurling. Sir Edward Grey even goes so far as to say that it is with extreme reluctance that the English Government object to any part of the legislation of the United States about the use of the Panama Canal. Nothing but a belief that British rights are impaired could impel them to take the step. And far from insisting that the British view of the treaty is the only one tenable, and must be accepted on peril of a breach, Sir Edward states his "perfect readiness" to submit the question to arbitration. The whole presentation is dignified and courteous.

On the question of disorder in the House of Commons, the Speaker's ruling may be in accord with parliamentary precedents, but certainly leads to absurd practical consequences. Speaker Lowther held that if any individual member disturbed the proceedings by cries of "Adjourn," "Divide," and so on, he could be "named" for disorderly conduct, and, if he would not apologize and subside, could be suspended for the session. But if such outbreaks were joined in by large numbers, who persisted in keeping up the racket and refusing to let any one speak or business be done, then the affair became one of "grave disorder," which the Speaker has no way of meeting except by declaring the session ended. This seems an exact reversal of the law of conspiracy, by which what is innocent in an individual becomes a crime if done by numbers in agreement. It is obvious that, under this ruling, it would be theoretically in the power of an obstreperous minority in the House to prevent the transaction of any business at all. But there are two things against this. One is the good sense and decency of the members, when not under great excitement. The other is that the Speaker, if such disorder were frequently attempted, would "name" and pick off the disturbers of the peace one by one, thus vindicating the dignity of the House. But the case reveals a singular weakness in an English or Continental presiding officer as compared with an American.

Whatever else may be said about the German Chancellor's order forbidding international marriages in the Kaiser's diplomatic corps, it is certain to be laid to the credit of the growing power of women in matters political. What else can have dictated it save fear of feminine international complications? For, from some points of view, it should seem as if the winning of, let us say, a Russian by a young German on duty in Russia would notably strengthen the hands of the attaché or Ambassador—we take it for granted that the wife duly transfers her national allegiance when she takes the marriage vow. From the purely social standpoint it has hitherto seemed an advantage to a foreign diplomat in England to have an English wife, with her knowledge of conventions and of the English language. But plainly some of these diplomatic Samsons must have been losing their locks to the detriment of the Chancellor's foreign policy. And then these international marriages may have become so frequent as to interfere with a promising home industry—the marrying of Germans by Germans. As for this country, we are proud to observe that our contemporaries attribute this order to the appreciation by Germans of our American women. So be it. No one in our presence shall be allowed to give any other reason for it. Is not the American woman admittedly the loveliest of her species?

As gratifying as surprising is the comparison now being made by French political writers between the methods of a Presidential campaign in their country and in the United States. There, they point out, complete ignorance exists, with apathy, as to the very identity of the candidates who will be voted on by the National Assembly in January. Here, how different! In this happy land, we are reminded, persons, ideas, aims, and candidates are exposed during a long period to the full fire of popular discussion and criticism, so that the final vote is absolutely representative of the people's wishes. Well, it cannot be denied that there was some fire, along with a due amount of heat and noise, particularly in the pre-Convention campaign last spring. The amount of light might profitably have been greater than it actually was. But when we consider the epigrammatic statement that the French President neither reigns nor governs, while the American President does both, we can hardly wonder that there should be apathy and ignorance about French Presidential candidates. Our interest in our own election is not always keen. A "conspiracy of silence" among Presidential aspirants in this country, however, is wholly inconceivable.

THE PRESIDENTIAL MESSAGE.

President Taft remarked, in his message to Congress on Friday of last week, that a full discussion of Government business requires "more space than one message of reasonable length affords." To this every editor and every reader—if any readers are left—will say amen. Presidential messages have been growing intolerably long. Mr. Taft's remedy is to send in three or four short ones—a "short" one, in Presidential definition, being considerably more than a newspaper page. But there are other ways of avoiding the surplusage. It is not necessary for a President to appear to go upon the theory stated by the mediæval writer quoted by Hallam: "This I say lest anything be left unsaid." There are whole sections of the ordinary Presidential message that could be severely cut down or left out altogether. The long rehashings of departmental reports—with leisurely phrases such as "I observe that the Secretary of War recommends," or "I note that the Secretary of the Navy urges"—could nearly all be omitted with no harm done. Still, if the whole must somehow be got through the Printing Office, we ought to be thankful to Mr. Taft for giving it to us in separate doses.

There are other reflections about such a message as he laid before Congress which he does not refer to, but which must occur to every one who gives any thought to Mr. Taft's situation. He is now obviously as one simply going through the motions. However sound the positions he takes or the arguments he uses, neither he nor anybody else expects Congress to pay the slightest heed. An outgoing President almost inevitably takes on the guise, in the last four months of his term, of a mere Public Functionary. This was true even of the hard-hitting Roosevelt. No sooner was it certain in 1908 that he would not again be President, than Congress began deliberately to ignore him. He sent it messages by the score, but might as well have sent them to the Dead Letter Office. And in President Taft's latest message there is one passage which rather pathetically betrays his own sense of his helplessness at present. He refers to his previous recommendations that the tariff be reduced, but adds that "now that a new Congress has been elected on a platform of a tariff for revenue only . . . it is needless for me to occupy the time of this Congress." Could there well be a sharper reminder of the misfit entailed by our awkward plan of having Congress not meet regularly until more than a year after it is elected? If the argument for a change, whereby the Federal practice should be made like that of all the States, needed any reinforcement, it could be found in the hapless plight of President Taft.

He cannot escape the air of doing his duty perfunctorily. The routine recommendations of his message sound more than ever routine. He has some correct and just things to say about our currency laws and their need of reform, about the Sherman law, about the duty of giving the Porto Ricans American citizenship—to single out only a few topics—but there can be, in the nature of the case, little fire or drive in his recommendations. He knows perfectly that they will be no more heeded than the wind that blows over the dome of the Capitol. Take the promise of accomplishing something away from a man, or a President, and you take the heart out of him.

There is, however, one part of Mr. Taft's message in which he expresses himself with warmth of conviction. This is the section referring to the proposed pledge of speedy independence for the Philippines. We make no doubt that the President holds his views on that subject conscientiously and patriotically. Moreover, he is entitled to be heard on it, not only on account of his official position, but because of the fact that he was Governor of the Philippines and has shown deep interest in the welfare of their inhabitants. But here he gives us a counsel of despair. Great things have been done in the Philippines, but all of them will be lost if American rule is withdrawn. Having been shown the better way for fourteen years—in sanitation, in road-building, in education—the Filipinos will instantly revert to a condition of barbarism if the "supervision" of the United States be broken off. President Taft admits that the Filipinos have done well in all the beginnings of self-government yet permitted them. In municipalities and in the national Assembly, as in the courts, they have shown themselves, he says, as men who "can be educated and trained to complete self-government." But this must be—"eventually." Even a promise to them now of independence eight years away would "arouse dissension and disorder." The news from Manila, with the testimony of the accredited representatives of the Philippines, is all the other way, but the President is very certain that no good could come from "a disguised policy of scuttle." It is of no use to talk to him about the United States guaranteeing the independence of the Philippines, for such a guarantee "we should be powerless to enforce." What, the world Power that we have become, as he elsewhere boasts, not able to compel other nations to keep hands off what we voluntarily relinquish!

President Taft's sincerity we do not question, but we do not believe that in this he speaks the mind of the American people. They will not forever be held back from doing an act of justice, and living up to the principles which have been bound to the very heart of the nation, by the cry of lions in the path. There is no call for hasty action—none, in fact, is contemplated. The proposal is to make the pledge and carefully watch over the steps leading up to its final execution. If disaster threatens we can retrace our steps; but if the way to the resumption of specie payments was to resume, the way towards self-government in the Philippines is to give the Filipinos a chance to show what they can do in governing themselves.

THE GOVERNORS' CONFERENCE.

The assembling of the fifth Conference of Governors at Richmond, Va., inevitably suggests that somehow this new piece of governmental mechanism has not fulfilled the high expectations that at the outset were entertained for it. We were going to have a House of

Governors, a Third House that would bridge the gap unfortunately left by the framers of the Constitution between the Federal Government and the States. With this new institution on the ground, the Twilight Zone would cease to be a safe resort for corporate malefactors of great wealth. What could not be done by Congress owing to Constitutional limitations, and what was not done by the isolated States because of inertia or worse, would be accomplished by the magic wand of uniform legislation. This was to be achieved by the same Yankee ingenuity which had made ducks and drakes of the elaborate system of the electoral colleges, taking from them the substance, while permitting them to retain the form, of power. And, indeed, the initial Conference had all the appearance of a body endowed with sufficient faith to move mountains. Meeting in the White House, almost under the shadow of the Capitol, discussing with earnestness and ability the burning question of conservation, the Governors themselves must have felt that they were upon the brink of destiny.

The second Conference kept some of the prestige of the first, but already there began to be more than whisperings that receptions and excursions were leaving the distinguished members in poor condition, physically and intellectually, for the ostensible purpose of their gathering. To-day the proud term House of Governors is hardly applied to the organization that was to rival the historic branches of the Government. Why this chasm between promise and performance? It must be conceded at once that there are inherent weaknesses in the project. Only twenty-seven Governors were present at the opening session, and not many more were in attendance at any time. We have, from Maine to California, no less than forty-eight Governors. Why should so many of them stay away from a Governors' Conference? Simply because dozens of men who at this moment are Governors will not be Governors a few weeks or months from now. Not indifference, but a natural and necessary turning of attention to that private sphere to which their fellow-citizens have relegated them, accounts for these numerous breaks in their ranks. This shifting character of the personnel of the Conference is bound, under the best conditions, to operate against its success.

But the chief causes for the disappointment are not essential to the scheme at all. What can be practically expected from a programme that sprawls over a series of topics, many of which do not concern the majority of the Governors assembled? The success of the first Conference was due as much to the limitation in this respect as to its choice of a topic that was uppermost in the public mind. But this year, for instance, the Governors listened to addresses on "Modern Penology," "A State Income Tax," "The Development of Inland Waterways," "Uniformity of Marriage and Divorce Laws," "What the State Can Do to Check the Drift of Population from Farms to Cities," and "Rural Credit." Instead of having their hearts burn within them as they went their several ways after the close of the Conference, what can they have had to take home but buzzing heads? It is true that the programme-makers this year recognized the advisability of selecting such subjects as are likely to come up in the various Legislatures this winter. They said as much. But what did they actually do? How many Legislatures will deal at their approaching sessions with the question of a State income tax? The number having to consider inland waterways is still less. It would have been much better to have chosen the one topic of uniform marriage and divorce legislation, and then to have arranged for speakers and discussion upon it that would have attracted the attention of the whole country, and sent the Governors back to their respective capitals with the draft of a bill that should hold first place in their legislative programmes.

Such a plan as this has made the annual meetings of private associations like the American Academy of Political and Social Science so notable and influential. Then the peripatetic nature of the Conference cannot be regarded as an aid to the best results. Would not its meetings at a fixed place, say, Washington, be more conducive to practical accomplishment? We would not be understood as saying that the Conference has achieved nothing, and still less would we imply that it has small promise for the future. The need of uniform legislation is greater rather than less than it was on the day when the Governors first came together. Nothing could have been much worse for the Conference than a gross overrating of its promise. But it might still be of real service to the States if it would concentrate its energies upon questions that are practical and of immediate urgency.

TURKISH DIFFICULTIES.

The disinterested sympathies of the modern world were undoubtedly with the Balkan nations in the war that is now coming to a close. We say disinterested sympathies, because, so far as the greater part of Europe is concerned, special reasons of politics exist to counteract the spontaneous sentiment of the masses. Thus the non-Slavic element in Austria-Hungary, the people of Italy, and probably a majority of the German people "sympathized" with Turkey for the plain reason that the triumph of the Balkan states was detrimental to specific Austrian, Italian, and German ambitions. But it is idle to suppose that, even in those countries, the hearts of many millions failed to be stirred in behalf of the Balkan people by many considerations: by their brave fight against odds; by the fact that they were continuing the ancient war of the Cross against the Crescent; by the fact that they were fighting for the rights of the native population against a foreign conqueror, and a conqueror whose history seems to be an unbroken chronicle of oppression, misrule, and massacre. This attitude of sympathy, unspoiled by personal motive, may naturally be best seen in this country. But it has found expression, too, in England, where the traditional Government policy of friendliness to the Turk has been forced to take cognizance of the strong popular current in the opposite direction.

To make out a case for the Turks is not, however, impossible, although it involves the two normally difficult operations of going a bit beneath the surface of things and indulging in a little plain speaking. Taking up the issues point by point, we might argue that the attack by the Balkan allies upon apparently overwhelming superior forces was not a desperate adventure, as we see now from fuller knowledge. They were attacking an empire on the decline, harassed by internal conflicts and by raids upon its territories conducted by European Powers. The sentiment of Cross against Crescent would have to face the troublesome fact that Christian

Powers have not hesitated to sacrifice Christian interests for the furtherance of their own purposes. It is a delicate judgment whether responsibility for the massacre and civil war that have ravaged Macedonia rests upon the Mussulman conscience or upon the conscience of the Christian nations that have deliberately permitted Macedonia to be turned into a shambles. The recent violent quarrels among the Balkan allies here enter into the question. As to the war being an uprising of the native population against a foreign conqueror, it is to be noted that, as history goes, the occupation of a territory for some five hundred years constitutes a pretty just claim to sovereignty. The Turks overran the Balkan peninsula more than two hundred years before the French conquered Lorraine, and more than three hundred years before the French acquired Alsace.

But putting aside all such special instances, there is one point of view from which it may be seriously questioned whether the present war, for all the beneficent results it may bring to the Balkan peoples, has not done great harm to a cause that is broader than the interests of the Balkan nationalities. The war has delayed and possibly destroyed forever the chance of ascertaining whether political progress and, specifically, constitutional government are really a monopoly of Christian Europe, or whether they are capable of being incorporated into the life of the Asiatic peoples as well. To those who do not regard it as an ideal state of things that one-quarter of the human race shall hold the other three-quarters in subjection, or that these three-quarters are estopped forever from the privileges and advantages of self-government, the breakdown of the Turkish experiment is a deplorable thing. China is now making the same experiment, but it is a question whether the Chinese people will get any fairer opportunity than that of the Turks.

The fact of Turkish defeat has been brought forward as proof that the Mohammedan is unfit for constitutional government. There are people who now say that under Abdul Hamid the Turks would have made a better showing than they have done after four years of constitutional government. That is arrant nonsense, so far as the broad aspects of the question are concerned. Granted that the army reforms introduced by the Young Turks have weakened the military strength of the Empire, it has happened largely because the Turkish army was caught in a state of transition. It surely took more than four years to develop the fighting instrument with which the rulers of Prussia brought about the unification of Germany. The fact is that the reform party in Turkey has never had a fair show. From the first moment of their success the play of European intrigue began to hum faster than ever. Austria seized a couple of provinces. Bulgaria declared its independence. The Greeks became more active than ever in Crete. Then came the Italian swoop upon Tripoli. Decidedly, it was shown that if a non-Christian people took to heart the lessons of Christian civilization and set about putting its own house in order, Christian Europe would not allow the thing to be done. Persia can testify to that as well as Turkey.

It is possible to hope, of course, that the opportunity for trying out the experiment of constitutional government in Turkey has not absolutely disappeared. When a treaty has been made and the Turkish frontier in Europe has been brought close to Constantinople, something like a basis for lasting peace may turn out to have been attained. The Sultan will then be ruling over a Mohammedan and Ottoman population, and the element of religious and racial animosity will have been largely done away with. Stripped of her provinces, Turkey may be allowed to work out her problems, for the simple reason that she has no more desirable provinces to take, outside of Asia. But no one will now venture to predict that Europe's keen appetite for a neighbor's territory will let her stop short at the new frontier, or even refrain from crossing the Bosphorus into Asia.

THE STUDY OF MILITARY HISTORY.

An appeal for a national society to concern itself with military history, written by Prof. R. M. Johnston, of Harvard, and published in the *Infantry Journal*, is to be followed by a discussion of the question at the coming meeting of the American Historical Association. It is, of course, well known that there already exists a Massachusetts Military Historical Society, of which the late John Codman Ropes was a leading spirit. State historical societies, particularly in the West, have likewise given much attention to military matters. It is felt, however, that nowhere has military history been lifted to the plane which it deserves, and that there now exists no national body which would make easy the coöperation of skilled civilian writers and technical military experts. Without such an association, Professor Johnston believes it will not be possible to produce in this country military history of the highly developed and technical kind now being worked out by the best writers in Germany and France.

With the desire to supply scientific history in any field it is impossible not to sympathize. In that of war the opportunity in this country is very great. As long as the nation lasts, the campaigns of the Civil War will, we presume, be fought again; and that the older struggles afford rich pickings for the historian is sufficiently illustrated by Charles Francis Adams's remarkable essay on the use of cavalry in the Revolution. Gen. James H. Wilson's just published memoirs, with their startling criticisms of Grant and Sheridan, are in themselves certain to provoke acrid discussion of the theories he so vigorously advances. Indeed, hardly a week goes by but some new contribution to the greatest of civil wars finds its way into print. Since the output is not likely to be diminished by the passing of the generation which did the fighting, it is evidently worth while to see if some direction can be given to the contributions of the future, or at least some standards raised by which the work may be judged.

For the proper discussion and analysis of military history, Professor Johnston holds that the successful writer must have technical knowledge of the military art, erudition, critical skill, and literary ability. That the trained military man almost invariably lacks the last quality is obvious to all who read the *Infantry Journal* and other service publications. Despite the memoirs of Grant, Sheridan, and Sherman, it can truthfully be said that West Point produces excellent soldiers, but poor writers; the lack of sufficient emphasis upon the English language and literature in an already crowded curriculum is regretted by many officers—particularly by those who have attempted the mazes of the Civil War records and sought to reconcile or understand the reports therein. Not that West Point must be blamed for the whole mass of slovenly writing, for its graduates were but a small minority at that time. But any one who recalls the terse, vigorous, and often picturesque dispatches of Sheridan remembers their refreshing character in the midst of a desert of reports apparently written to conceal thought and often to hide what actually took place. The late Col. Archibald Gracie spent fifteen years trying to reconcile the reports of the battle of Chickamauga and to ascertain what really occurred there. His untimely death last week leaves the Confederate side of the story untold. A military historical society could well justify itself if it dwelt on the necessity of teaching future war commanders how to write.

Since it is devoutly to be hoped and expected that we are to have no more wars, other activities of the proposed society are probably more important. We cannot, however, concede that active military experience is absolutely essential, any more than we would assert that literary skill is necessary to make a great commander. Mr. Ropes was probably our foremost military critic; for physical reasons he could not go to war. So, too, some of the best commentators on the Civil War have been men who never bore arms. That the military man is too apt to view matters narrowly; that, like many professional men, he cannot see the forest for the trees, and that he too frequently starts off with a thesis he is determined to prove—these are all reasons that make against any soldier's being the ideal military historian, though Professor Johnston would bestow this title on Gen. Bonnal for his "Manœuvre de St. Privat." They are, moreover, grounds why the civilian coöperation which Professor Johnston suggests should make itself worth while.

We cannot, however, regard as wise his suggestion that there be a section of the General Staff to devote itself to producing military history, should no national society be possible. The General Staff is a fluctuating, not a stable, body; since officers can be detailed to it only for four years, and must then return to other duty, this would alone make against continuous scientific historical production. Moreover, the General Staff does not to-day stand as well as when first organized; it has seemed bent only on getting more officers and more men, upon hastening this peaceful nation into militarism. Congress showed its displeasure last summer by cutting off nine of the General Staff's members. If our generals, like Messrs. Wood and Bliss, continue to talk as foolishly as they have been doing, there may be still other changes. At any rate, it is quite safe to say that, judging by articles in the *Infantry Journal* and the past record of the General Staff, if any history were produced in the War Department it would be of the machine-made kind—written to demonstrate, not the truths of history, but the necessity for the national military policy which might happen to be advocated by the temporary personnel of the War Department. History of that kind is worse than no history at all. Infinitely preferable is the bare, colorless chronicling of the events of 1870-71 which distinguishes the military memoirs of Field-Marshal Von Moltke.

COST OF GOING TO COLLEGE.

Tuition fees, room rent, and boarding rates have been rising in the college world on a scale almost parallel to the increase in the cost of living everywhere. In the Boston *Transcript* the other day, Henry T. Claus presented the results of a detailed investigation into conditions prevailing in thirty selected colleges to-day as compared with twenty years ago. In 1892, the average tuition fee was almost exactly one hundred dollars, ranging from $13 at Purdue and $36 at Allegheny to $200 at Radcliffe and Massachusetts Institute of Technology. Out of thirty colleges, seventeen charged $100 or more. In 1912 the average tuition fee is $126, with Radcliffe unchanged and "Tech" gone up to $250; only five colleges charge less than $100—Purdue, Bates, Colgate, Bowdoin, and Hamilton. The increase in the cost of board during the same period has been 23 per cent. for thirty colleges (not altogether the same as those dealt with in the matter of tuition fees). Dartmouth and Williams are the hardest hit, with a straight advance of 50 per cent. But that the phenomenon of high prices is country-wide, is shown by an increase of 40 per cent. at Stanford and Purdue and 35 per cent. at the University of Illinois.

On the other hand, taking this single question of cost of food, we find broad variations within what is virtually the same community. This brings up that mysterious factor which makes all discussion of the cost of living so difficult—that equation, personal or accidental, which does make it possible for so many people to wring subsistence and comfort out of a statistically impossible situation. For instance, no less than six colleges, in Mr. Claus's list, report no increase in the cost of boarding their students since 1892. These zero figures are dismissed, quite properly, as indicating that either board was excessively high in these colleges twenty years ago, or that the college dining-rooms to-day are doing business at a loss. But, avoiding extremes, why should the increase at Amherst be only 18 per cent., as against 50 per cent. at Dartmouth, or 10 per cent. at the University of Michigan and 35 per cent. at the University of Illinois? The obvious reply is that it depends largely upon the facilities developed by the college authorities for supplying food to the students at cost. Such machinery has been built up at Harvard in more complete form than in any college in the country, and Harvard accordingly shows almost exactly the average increase for all the colleges concerned—22 per cent., as against an average of 23 per cent. Those colleges that fall below Harvard's figure are to be congratulated on exceptional good fortune. Where the increase has been 50 per cent., they are apparently not facing the problem of high prices as energetically as they might be doing.

If we add to the items of tuition, board, and rent such other necessities as clothes and books, it will be plain that an estimated increase of 25 per cent. in the cost of keeping a young man at college to-day, compared with twenty years ago, is moderate. Take into consideration also "the cost of higher college living," the demand for satisfactions that were once luxuries, or even non-existent, and the rate of increase is still sharper. It would be interesting to know how large a pecuniary burden the social and athletic features of college life impose on the student. At the large universities, of course, the football team pays for pretty nearly everything;

but it must be different at the small colleges. What, too, is the effect of fraternity life on a man's expenditures? The fraternities are sometimes defended as institutions for enabling students to live in comfort on an economical basis, but there is little doubt that the comfort is more conspicuous than the economy. Presumably, those students go into the fraternities who can afford it, but the fraternity influence on the general standard of life and expenditure in a college community must be reckoned with.

The one counterbalancing factor to be taken into consideration is the increase in scholarships and other forms of student aid. Thus one student reports that he entered Amherst in 1893, paid $110 for tuition and $65 for room rent, and received scholarship aid to the amount of $87.50. To-day, under exactly the same conditions, he would pay $140 for tuition and $55 for rent and receive as a grant in aid the sum of $140, making his cash outlay $55, as against $87.50 twenty years ago. But even in this case the present advantage is almost eliminated by the increase in the cost of food, which is 18 per cent. higher than it was twenty years ago. The great increase in the amount of pecuniary assistance rendered to deserving students in the form of scholarships is not to be denied, but that such aid can reduce the cost everywhere and for every one as in the Amherst case we have cited seems incredible. Presumably, colleges do not resort to raising their tuition fees until they are absolutely forced to it. To give back in scholarships all that they gain in higher fees would be absurd. We are therefore justified in assuming that, whatever may be the case of the exceptionally gifted student, for the student body as a whole the increase of scholarship facilities cannot compensate for the direct increase in the cost of living.

This state of affairs carries a sober implication for the great mass of citizens of moderate income to whom the sending of a son to college has always been a sacrifice. To-day it is a question with them not only whether the high cost of living in the home makes it possible to send the boy to college, but to a college where the law of high prices operates as it does at home. A greater drain has to be met out of smaller resources.

THOROUGHNESS IN COLLEGE.

The Harvard Faculty of Arts and Sciences has taken a noteworthy step in requiring as essential to a bachelor's degree "a special final examination upon each student's field of concentration within the field of the division of history, government, and economics." Primarily, this is another blow at the old idea of a college as an attractive resort where the sons of the well-to-do may idle away four years, with the assistance of tutors, while residing in luxurious dormitories or equally luxurious clubs. Next, it is a clear departure from the elective system which was once a chief distinction of Harvard. Most important of all, it means an advance towards the thorough intellectual training of the collegian—towards the placing of American university training on a par with that received abroad. As such, it is a move in the same direction as the preceptorial system at Princeton, and the increasing development of the group form of studies in the establishment of which Johns Hopkins was the leader.

The change is particularly notable at Harvard, since there, if anywhere, the lack of direction of the student, and the haphazard nature of most studying under the elective system, were especially marked twenty years ago. If a man had no particular aptitude, or was interested in a number of subjects, his education at Harvard at that time was bound to be desultory and superficial. He would acquire a smattering of fine arts, of Greek and Latin, of German and French, of geology, history, economics, and government; but if he did not continue his studies after graduation, he went through life with but a small part of that scholarship which marks the graduate of Paris and Berlin or Oxford and Cambridge. The disappearance of the old rigorous courses in classics removed the chief source of the moral and mental discipline in the graduates of earlier years, even though their range might be limited. They had no smattering of a dozen or fifteen subjects, but what they knew they knew well, and, more than that, by mastering certain branches of knowledge they had laid the foundations for attacking and conquering others.

Precisely in this direction is Harvard now headed, if we may judge by the new regulation. Against the system of daily, half-yearly, and yearly examinations we have heard many protests; they make cramming possible, they guarantee in no wise the thoroughness of a student's knowledge, and they place at a disadvantage the student who recites well but under pressure expresses himself badly. But before a group examination at the close of four years of study, such as is proposed, most of these protests fall. A similar examination has long been the stepping-stone to a degree of doctor of philosophy. If this one is properly worked out, the candidate for the A.B. who has specialized in the field of history, government, and economics must know that field. He cannot as a senior pass well in advanced American history when his knowledge of the origins and the early forms of our government comprises merely a hazy recollection of a course in colonial history to which he listened in his freshman year.

How rapidly this system can be extended to other coördinated branches of study remains to be seen; that the seed will fall on fertile fields at Harvard and in other colleges is highly probable. Since the idea is also to stimulate men to read for themselves, it should seem not improbable that Harvard might come ere long to a preceptorial system of some kind or other, so that in their search after a well-rounded and comprehensive knowledge students would have personal touch with an instructor and his coöperation. Certainly, the fostering of the student's own initiative, the giving him the desire to browse along collateral lines, is of the utmost importance. If the final examination does this, it will accomplish great things. But to us it seems as if no examination could achieve what is desired if there be no guides for the wayfarer, to show at least where the longed-for paths of knowledge begin and by what signs one may follow them through the forest of learning.

Then, if this pilgrimage be undertaken in the right spirit, the wayfarer will find new openings, new beauties, for himself; the more of them that lead him beyond the special search upon which he is embarked the better. The final test will prevent too random browsing; but that which reveals unexpected visions will make for that culture which is at best so hard to attain in all our institutions of learning. Indeed, it is another milestone in our search for thoroughness of training and breadth of scholarship which has thus been set, as opposed both to the superficiality of the present and to the pedantic acquirement of fact which has far too often passed both for broad knowledge and humane culture.

GERMAN BOOKS.

The output of the German book market at this season of the year is so enormous that even when little beyond a brief survey is attempted, the abundance and variety are more than bewildering. The enjoyable feature is that the quality of the books, from a mere technical standpoint, is not out of proportion to the quantity. Typography and binding are now considered far more seriously than a few decades ago. The influence of English models is evident in the choice of the materials that go into the making of a book, as also in the style of its decoration.

The Grimm centenary has called forth several new editions. Among them is one of the "Kinder- und Hausmärchen," in three volumes, with the little-known beautiful introduction by Hermann Grimm, and an after-word by Paul Ernst; also a two-volume edition of the "Deutsche Sagen" (Munich: Georg Müller). Of a more festive appearance is the Säkularausgabe of the "Kinder- und Hausmärchen," with four full-page illustrations in color and 181 in the text, by P. Grotjohann and R. Leinweber (Stuttgart: Deutsche Verlagsanstalt). To the young reader and him who seeks allegorical meanings in such tales, the "Märchen" by Hauff have lost none of their fascination. They, too, appear in a new edition (Georg Müller), with illustrations by Alfred Kubin. This artist-author will be remembered for his weird and striking story, "Die andere Seite," which appeared some years ago, with illustrations by himself. Another writer of tales who seems not yet to have been forgotten is Musäus, whose "Märchen" are presented by Bruno Cassirer, of Berlin, in a facsimile reproduction of the edition of 1780. A work which perhaps stands alone in the literature of folk-lore is "Der Brunnen im Volksleben" (Munich: R. Piper), by Dr. Barthold Rein. It is a book of well-lore, with 115 illustrations, treating the subject from all points of view.

Travel books are very numerous. The most valuable among them are those not limited to description of places and people, but offering a record of personal impressions, experiences, and reflections. Among such books are some contained in the series planned by S. Fischer, under the title, Bücher der Arbeit und der Abenteuer. The initial volume, by Arthur Holitscher, "Amerika—heute und morgen," attractively illustrated by photographs, commends itself for its remarkable insight into phases of life that usually escape the foreign visitor. From that auspicious beginning one can safely expect the succeeding books to be equally valuable and enjoyable. The account of a trip around the world by the southern route, "Fünf Meere und fünf Welten," by Norbert Jacques, is likely to bring into relief that author's keen powers of observation and his admirably suggestive style. The third book in the series which belongs to the literature of travel is Emil Ludwig's "Africana."

The example of the Kultur monographs on the world's interesting cities (New York, Munich, Nuremberg, Venice, Dresden, etc.), which were formerly published by Marquardt, now by Martin Brandus, of Berlin, has been productive of a more ambitious undertaking: Die schöne deutsche Stadt (R. Piper). This series of handsome volumes is a mine of information to the tourist who desires more than a mere cursory impression of the country traversed. The first volume is devoted to central Germany and contains 160 illustrations; the second deals with southern Germany and contains 288 illustrations. Both books direct the attention of the reader rather to less known places well worth visiting than to those already included in the ordinary itinerary. Besides these works, there is a special volume devoted to a city dear to every lover of Germany's quaint and picturesque past: "Rothenburg," by Toni Boegner. It contains 175 illustrations, many of them reproduced from old prints and woodcuts, and as a souvenir of a visit to this unique relic of by-gone times is of inestimable value.

The traveller in Switzerland who is given to climbing will delight in Alfred Steinitzer's "Der Alpinismus in Bildern" (R. Piper). Among the 700 illustrations in this book are reproductions of Doré's "Ascension du Mont Cervin, 14 Juillet, 1865," commemorating one of the many tragedies of the heights. There is also a curious woodcut from an old magazine, representing the first woman who climbed Mont Blanc, standing on the back of a man and supported by three others, with the words underneath: "Plus haut que le Mont Blanc."

The nature student and the general reader will welcome a second edition of Dr. Konrad Guenther's pictorial atlas of the descent of man, entitled "Vom Urtier zum Menschen" (Deutsche Verlagsanstalt). It is this work of which Ernst Haeckel wrote: "I am sincerely glad that this important undertaking which I myself had in mind for some years, is carried out in such a practical and attractive form. This instructive work in a popular manner supplements my Anthropogeny, and in the interest of the subject I wish it great success." The work is published in two volumes with ninety-three illustrations, some of them in color, and is also sold by subscription.

Of historical and biographical works there is a great number. Many readers who at some time have been under the spell of Johannes Scherr's vigorous thought, mordant satire, and forcible style will be glad to learn that there is a new edition of his collected works (Leipzig: Hesse & Becker). Besides that the same firm has reissued his "Geschichte der Religion," his "1848—ein weltgeschichtliches Drama," "1870-1—Vier Bücher deutscher Geschichte," and "Schiller und seine Zeit." The last work forms an especially attractive volume, containing one steel engraving, thirteen portraits, and twenty historical plates.

Books on art seem to outnumber other illustrated works. Julius Meyer-Gräfe has edited and translated the writings of Eugène Delacroix, "Literarische Werke" (Leipzig: Insel-Verlag). The book contains essays on beauty, the ideal, realism, metaphysics, art criticism, Rafael, Michelangelo, Prudhon, Gros, Poussin, Charlet, Puget, etc. For illustration it has twelve drawings by Delacroix. The same author has written on Hogarth, the Impressionists, the great English masters, Van Gogh, Marées, and Cézanne (R. Piper). Karl Scheffler, one of Germany's most gifted art critics, is the author of a volume on the art of Max Liebermann (R. Piper).

The Klassiker der Kunst (Deutsche Verlagsanstalt), a collection of monographs, has reached its twenty-first volume with a book on "Watteau," containing 182 illustrations, and its twenty-second with a volume devoted to Murillo, which has 250 illustrations. The student and the unprofessional visitor of art galleries will find Karl Voll's "Vergleichende Gemäldestudien" (Munich: Georg Müller) most valuable. The two volumes of the richly illustrated work contain a mine of indispensable information, and abound in critical suggestions.

Among the new editions of the world's greatest books are some very extraordinary enterprises. There is the Bible, revised from Luther's text, with an introduction by Hermann Hesse (Georg Müller). But all *éditions de luxe* of the Scriptures are surpassed by "Die zweiundvierzigzeilige Bibel von Johannes Gutenberg" (Insel-Verlag). It is no less than a facsimile reprint in colors of the Bible of Mayence, 1450-1453, edited by Paul Schwenke. It is in three volumes, of which the second is to appear in the autumn of 1913. The paper edition is sold at 700 marks, the leather-bound at 850. Three hundred copies are printed on hand-made paper, among them ten inlaid in gold at 2,600 marks, and three copies on parchment, illuminated by hand, at 6,000 marks. The work is sold by subscription, but no subscription will be taken after January 1.

There is a Jubiläumsausgabe of the "Decameron" with reproductions of 104 woodcuts from the Venice edition of 1492 (Georg Müller). The translator is Albert Wesselski. There are 825 copies printed on hand-made paper, and there are a number bound in vellum by Köllner of Leipzig.

The same publisher is bringing out the complete works of Edgar Allan Poe in a translation by Theodor and Gisela Etzel. For the illustrations the publisher could not have found an artist more qualified for the task than Alfred Kubin, whose weird imaginings stamp him as the poet's spiritual brother. Gobineau's "Renaissance" has been newly translated by Bernhard Jolles and is presented in an elegant edition with twenty-three illustrations (Insel-Verlag).

Of new editions of the German classics there are very many. Foremost among them for typography, binding, and moderate price are those of the Tempel-Verlag of Leipzig, containing complete editions of Goethe, Schiller, Kleist, and Heine. A. VON ENDE.

NEWS FOR BIBLIOPHILES.

Sir Walter Scott suffered at the hands of fraudulent imitators. A well-known instance is the story "Walladmor," which was written by Haering to furnish the German market with a novel by the great romancer, who had omitted to supply one for that year's book-fair; but there was a pseudo-Scott nearer home.

A certain William Fearman, of whom nothing appears to be known, announced "a fourth series" of "Tales of my Landlord." Therefore, John Ballantyne addressed to the London papers a letter in these terms:

> Sir, I have observed in the *Chronicle* lately, the Advertisement of a Fourth Series, Tales of my Landlord, by Jedediah Cleisbotham, &c. &c. to be published the 1st of November.
>
> That the public may not be taken in, to suppose this work a production of the Author of Tales of my Landlord in three series: the first containing the Black Dwarf and the Old Mortality; the second, the Heart of Midlothian; and the third, the Bride of Lammermuir, and the Legend of Montrose; I who have transacted betwixt the Publishers and the Author of these works, as his Agent, do, on my certain knowledge, assure you and the Public, that this Author has no concern whatever with the catchpenny Publication announced as above; and although I have not his express authority for saying so, I am morally assured, he will at no period send any further work to the public under the title of Tales of My Landlord.
>
> The copy-right of the Tales of My Landlord, in twelve volumes, has been purchased by, and is now the property of Messrs. Constable & Co.; who are taking legal measures to interdict the publication of this Spurious Work, under their title, and to punish those concerned in it, when they shall be discovered.
>
> I am Sir,
> Your obedient servant,
> JOHN BALLANTYNE.
> Bookseller for Scotland
> to his R. H. the Prince Regent.

Fearman, not in the spirit of his name but with almost matchless impudence, replied smartly:

> Sir: That you are the Purchaser and Publisher of the First, Second, and Third Series of the Tales of My Landlord nobody questions. I also am the Purchaser and Publisher of the Fourth Series. If by the Author you mean Jedediah Cleisbotham, I think (to say the least of it) you presume too much, when without having read a line of the Fourth Series you pronounce it spurious. The Fourth Series collected and arranged by Jedediah Cleisbotham, is no more spurious than the First, the Second, or the Third. It is for the Public to judge of that when they see the Work, and certainly not for you who have never seen it.
>
> That Jedediah will prosecute Jedediah, because Jedediah's stores have happily furnished a Fourth Series, is as little to be believed as feared.
>
> I have the honor to be,
> Sir, your humble servant,
> WILLIAM FEARMAN.
> 170 New Bond-street.

Fearman also circulated "A Letter in reply to the ridiculous threats of Mr. John Ballantyne, bookseller for Scotland, against the Publisher of the fourthcoming series of 'Tales of My Landlord,' containing 'Pontefract Castle.'" In this, trading on the secrecy which had enshrouded the Waverley series, he says:

> There is one straight-forward and manly way of settling the question. Let the Author come forward and claim his own, not as Jedediah Cleisbotham, not as "the dream of a dream, and shadow of a shade"; not under the wing of Mr. John Ballantyne, Bookseller for Scotland, who can only offer the brass of his assertions in lieu of current coin. I shall then be enabled to decide whether the MS. I hold is or is not by the same person; certainly I cannot, till then, take upon me to pronounce.

Again he says:

> I, as publisher, disclaim all ideas of acting in the least degree dishonourably by the Author, whoever he may be. I have no means of judging what is his, or what is not his composition. Were I sure that my MS. were not his, and the publication contrary to his wish, I would drop the title, and trust, as I well might, to the intrinsic merit of the Work.

Southey had seen the announcement of the fictitious series, and, with some of Scott's other friends, was somewhat concerned over it. Ballantyne and Constable both thought the time had come for the "author of Waverley" to reveal himself, but Scott refused. "The author who lends himself to such a trick must be a blockhead," he declared; "let them publish and that will serve our purpose better than anything we ourselves could do."

The book trade would doubtless know that Fearman's novelist was an impostor, but the guileless public must have been puzzled when they saw the title-page of "Tales of My Landlord, New Series, containing Pontefract Castle," published in 1820, and "Tales of My Landlord, New Series, containing the Fairy of Glas Lyn," published in 1821, each in the orthodox three volumes, and each containing a preface by the enterprising publisher. He was full of admiration for the anonymous author:

> Such a mind as that is not to be hermetically sealed, like a spirit, in the North. I have in fact no doubt that Pontefract Castle will create an era in the annals of Romance.

Scott was a better prophet than the piratical publisher. "Pontefract Castle" is not without cleverness; the unknown writer catches in a superficial way some of Scott's style, but he has not the scholarship, and still less has he the genius, of the Wizard of the North. There is much about Rosicrucianism in the story, and the writer regards John Toland and Charles I as contemporaries. The Roundheads are painted as greedy, sanctimonious, sensual hypocrites, while the King's men are the pink of perfection. The Puritan preacher Purefoy speaks of reading the "Pilgrim's Progress" some half-century before it was written. Cromwell is depicted in the most unlovely colors, and appears in the novel character of a captive in the hands of the Cavaliers. Hopkins, the witch-finder, is another figure, and the gallant Cavalier rescues a poor old witch from him. Perhaps as a sample of the style of the pseudo-Scott we may quote part of the evidence of Ebenezer, the portly and rubicund cook, against a supposed witch. Hopkins asks if he saw her riding on a broomstick:

> "Na, mun, modder, she's too deep to be seen at her tricks. I did na see her, but I felt her: for I itched, and roobed, and scroobed the houl night, for all the worle as if I lay upon a cowitch; and there was sooch a wowling and catter-wowling wi' that domd black cat that used to follow her. I'm moral sartain, the Laccademon snuffed me out."
>
> "The Cacodemon you mean. Well and so, this cat follows her? Have you seen it lately?"
>
> "Na, na—the baist's up to someat, Ise tell thee. Never since Miles White watched her out of the black posten. Miaw, said the limb of Satan—and snuffs, and snuffs, as if he wanted a tidbit of flesh.—Oh, it's you, Beelzebub! says he, is it? By the poors, Ise mark ye. So, out he whips his loong soord, and slices off one o' t' baist's paws, as nice as ninepence.—All's right, thought he; I shall know ye now, mun, by head mark. Wull, would ye credit it? he meets the baist ond' next day, like, with all his paws as whool as mine, and it miowls him in the face, as who should sa'—it's varry pratty, like, but it won't do. Wull, this passed on—and in a day or two, wou'd ye credit it? there comes this old hag—this good woman, I mean, and brings ye another woman to th' Spittle, wi' never a hond. So then, the murder was out."

In this tale—told in what ought to be a Yorkshire dialect, but is mere misspelling—the folk-lorist will recognize a legend that is to be found in the popular mythology of various nations.

The bogus "Tales" did not reach a second edition, while the real ones have been reprinted hundreds of times, and still retain their pristine charm for the lovers of romance. WILLIAM E. A. AXON.

Correspondence

THE COPYRIGHT LAW.

TO THE EDITOR OF THE NATION:

SIR: It may interest those of your readers who are authors to learn that provided they fulfil all the demands of the present American Copyright law and wholly manufacture their books in the United States in order to protect their copyright in their native land, they are thereby debarred from importing a single copy of their work from Great Britain, where it has been simultaneously made and published by a British firm.

Under a ruling by the United States Treasury I have recently been prohibited from receiving the usual *gratis* copies which are presented to the author by his British publisher. The American author is thus debarred from seeing the form in which his work has been issued by his British publisher. The reason given for this decision is that, according to the manifest meaning of the law, such prohibition shall be made against any copy, or copies, of any work that has been copyrighted in this country.

This seems to me to be both unjust to the American author, and at the same time an illustration of a form of protection which is certainly not in the interest of the author, and which is doing no conceivable good to the printers, typesetters, and publishers, in whose interest the author's rights are presumably sacrificed.

I should like to know what is to be said for such a prohibition as this by leading publishers, like Mr. George P. Brett or Mr. Charles Scribner, who are, of course, interested in the welfare of their authors in British markets. One would suppose that the payment of a duty would enable the author to bring in his *gratis* copies; but even this privilege is denied him. In order to bring through the customs a book written by himself he must have wholly manufactured it in Great Britain, to the damage of the American printer, typesetter, and publisher, and he must have sacrificed his rights as a native born citizen in his own country.

Of course, it is easy enough to break the law and get a sight of one's own book in its British dress by bringing it in in a variety of surreptitious ways. But some of us prefer to obey the law if we can.

In the case in point I acted as the author's agent, but the law in the case applies to either of us. WM. S. BOOTH.

Boston, Mass., December 5.

SCANDINAVIAN STUDIES.

TO THE EDITOR OF THE NATION:

SIR: Some confusion exists in the press regarding the relations between two international organizations, the American-Scandinavian Society and the American-Scandinavian Foundation. The two institutions are acting in close sympathy and exist for virtually the same end, to promote closer intellectual relations between Americans and the peoples of Denmark, Norway, and Sweden.

The Society, like the Japan Society and similar bodies, consists, as the name implies, of members, several hundreds—potentially thousands—on both sides of the Atlantic. It was established in 1908 with Nicholas Murray Butler president and Carl Lorentzen secretary. Through the efforts of the Society, Scandinavian students came to America, and President Butler, Chancellor MacCracken, and Prof. Samuel T. Dutton lectured in the Universities of the North, while several Scandinavian professors lectured in America, among them Prof. Otto Jespersen, of Copenhagen. President Butler was succeeded by Niels Poulson, of Brooklyn. This year the president of the Society is John D. Gade, of New York, under whose leadership the Society is bringing to America an exhibit of 150 paintings from Sweden, Denmark, and Norway, to be shown first in New York on December 10 and thereafter in Buffalo, Toledo, Chicago, and Boston.

The Foundation is an independent institution which grew out of a bequest of the late Niels Poulson, second president of the Society, who made the Foundation residuary legatee of his estate, a total endowment of more than $500,000. It is a corporation consisting of a self-perpetuating Board of Trustees, empowered to receive and administer funds. The president of this board is Rev. Frederick Lynch, of New York, and the board includes professors of Columbia, Yale, Harvard, and Massachusetts Institute of Technology, as well as prominent professional men and merchants with Scandinavian interests in various parts of the country. This year, the chief undertaking of the Foundation is the giving of financial support to the Scandinavian Art Exhibit. In addition it has granted five scholarships to graduate students of Christiania, Copenhagen, and Gothenburg studying in the United States, and to graduate students of the Universities of Iowa and Chicago studying the Norwegian language at the University of Christiania. The Foundation has also established a bi-monthly magazine shortly to appear, to be called the *American-Scandinavian Review*.

These are but beginnings; greater dreams are entertained by the officers of the Foundation and the Society, including libraries and institutes. They face also greater problems, problems scarcely formulated.

The great problem, after all, is the conservation of Northern culture among the Scandinavian element in the American people. While this problem applies to all nationalities, it is most urgent in the case of the blue-eyed race who combine the high physical desirability of vikings with an illiteracy of lower percentage than that of our own English cousins. The civilization of these Northern peoples is the product of centuries of household education in weaving, carving, and painting, in song and stringed instruments, and story telling, and much book learning in many tongues.

Too often the Scandinavian who comes to America leaves all this heritage behind him. He is faced with new conditions which respect only one of his racial assets, namely, thrift. How can the American-Scandinavian Society through its members, or the Foundation through its funds, act to impress upon the public mind the value of Northern traditions, and aid our Scandinavian citizens to conserve their inheritance and contribute it to their new national estate?

H. G. LEACH.

New York, December 6.

A UNIVERSAL ALPHABET.

TO THE EDITOR OF THE NATION:

SIR: It is reported that the United States Bureau of Education is preparing to make an inquiry among linguists and educators in this country as to the desirability and practicability of an international agreement on a universal alphabet to be used first in dictionaries and similar manuals, as a uniform system of indicating pronunciation. At some subsequent time, the proposed alphabet might come into general use among the nations, and might prove to be one more strand in the cable of international comity and peace. All will probably admit the desirability of such an alphabet, and those will believe in its practicability who are familiar with the rapid extension already attained by the alphabet at present promulgated by the International Phonetic Association.

RAYMOND WEEKS.

Columbia University, December 7.

Literature

NEW GIFT BOOKS.

René Bull's pictures for the "Arabian Nights"—there are twenty plates in color and countless sketches in black and white—are not of the latter-day Orient of Max Reinhardt, with its simple lines and restrained colors, but the georgeous, flamboyant, gilded, and lapis lazuli East of our childhood. Bagdad is a city of crowded blue domes and globe-tipped minarets, the Caliphs are most abundantly bearded, and the genii are overwhelming in their length of claw and forked tongue, but with a relieving sense of make believe that properly results in terrifying the young mind without frightening it. (Dodd, Mead; $3.50 net.)

W. Dacres Adams, in "A Book of Beggars," presents a gallery of London types drawn with a vivid sense of actuality, and just a hint of humor. His beggars are not all of the lowly; among them is the Lord Mayor of London, in scarlet and gold, "appealing" in behalf of some worthy cause; the bishop in lawn sleeves, entreating; and the winsome sister of charity, knocking at the door. For character with a tragic note in it, the newsboy may be mentioned. For character with a laugh in it there is the politician, a little masterpiece of its kind. (Lippincott; $1.25 net).

Those looking for a volume of smart society pictures arranged with explanations so as to form a story, will be satisfied with "The Adventures of Kitty Cobb," by James Montgomery Flagg. (Doran; $2 net.)

Mrs. Andrew Lang continues the Christmas books of her late husband with "The Book of Saints and Heroes" (Longmans; $1.60 net). Again Andrew Lang's favorite illustrator in this kind, H. J. Ford, provides charming pictures in color and black-and-white. The saints are mostly of early date, Jerome, Brendan, Elizabeth of Hungary, Francis, Columba, Augustine. Mrs. Lang recites their legends with simplicity and feeling, and the collection will be welcomed by children and grown-ups who have been properly bred on the multi-colored fairy books.

The revival of dancing as an art receives the attention of Caroline and Charles H. Caffin in a genuine tome of comment and illustration, "Dancing and Dancers of To-day" (Dodd, Mead; $4 net). As might be suspected, Pavlowa and Mordkin are the figures around whom the book is built. All their various attitudes are shown to have special meanings, and dancing as practiced by them is seen to share the subtlety of music itself. Interesting information is furnished relative to the training of the Russian ballet school. The story is told that Mordkin attended a vaudeville show in this country at which the new Russian dancing was burlesqued. "The comedian made a few eccentric steps, then explained to his audience that those steps signified that he was a girl whose lover was sick in Pittsburgh, and he was going by train to see him and would have to change from the local to the express." So difficult was it for Americans to get used to the idea of a man dancing seriously as an artist. Description together with photographs, will be found of virtually all the dancers of note whom New York has seen these dozen years.

Mrs. Gaskell's "Cranford" is out in holiday dress with a binding of navy-blue, relieved by a design of red and gold. The half-dozen colored plates from the hand of H. M. Brock, R. I., are quaint and pretty. (Lippincott; $1.50 net.)

Alfred Sutro has translated, and Edward J. Detmold has illustrated, Maeterlinck's "The Life of the Bee" (Dodd, Mead; $4 net). The illustrations are mounted on inserts, and represent various activities of life both within and without the hive. Especially striking are the drawings of The Queen, Founding the City, The Duel of the Queens, and The Combs. More delicate in coloring are some of the sketches of flowers. The whole makes a large and handsome volume, clearly printed, and not too heavy to hold.

To his previous exquisite work Edmund Dulac has added a set of illustrations for Poe's "The Bells and Other Poems" (Doran, $5 net). In conception, as in execution, these drawings are satisfying. They have caught the wild vagueness of "Ulalume," the grewsome tragedy of "The Conqueror Worm," the terror of the "evil things, in robes of sorrow," in "The Haunted Palace," and the gladness and the fiendishness of "The Bells." Their richness of coloring was to be expected from the former achievements of this artist. Naturally, bright hues are rare in this latest collection, but the sombreness along with the depth of color is in keeping with the themes of the poems.

Hugh Thomson has made a notable series of illustrations for Goldsmith's "She Stoops to Conquer" (Doran; $5 net). At the beginning of each act is a pen-and-ink drawing representative of the situation as it is disclosed by the raising of the curtain at that point, and there are other pen-and-ink drawings within the scenes. The bulk of the illustrations, however, are in color. These are particularly interesting for the facial expressions which they depict, ranging all the way from mild surprise to shrewish anger.

From Henry Frowde come half a dozen thumb-nail volumes of selections, bound in wallpaper pinks and greens. Browning is here with the "Pied Piper," "Ghent to Aix," "Theocritus," "The Grammarian," and "The Statue and the Bust." Dante Gabriel and Christina Rossetti have a volume apiece. The others are Robert Herrick, Ruskin, on the "Mystery of Life," and Ella Wheeler Wilcox.

Emerson's lecture essay on "Success" has been issued in a Riverside Press edition by Houghton Mifflin. It contains a brief introduction by Ferris Greenslet. The edition, notable for the quality of the paper and the character of the printing, is limited to 550 numbered copies, of which 500 are to be sold at $2 each, net; the plates to be destroyed.

From Portland, Me., Mr. Mosher sends out his usual group of alluring reprints. Among these, two slender volumes of pocket size contain Stevenson's "Flight of the Princess" and Vernon Lee's "In Praise of Old Gardens." Of somewhat larger size are Fiona Macleod's "Silence of Amor" and Pater's "Renaissance." Mr. Mosher has also made an anthology of prose and verse to which he has given the title "Amphora" (reminiscent of Leigh Hunt's "Jar of Honey"), and subscribed himself as "the Editor of the Bibelot." The subscription is happy, as the flavor of the collection might be described as the quintessential charm of the Bibelot books. Two other new and copyright volumes are "Lyrical Poems," by Lucy Lyttelton, and "Roses of Pæstum," by Edward McCurdy. The handsomest of Mr. Mosher's books this year is a quarto volume entitled "Memories of President Lincoln," which contains a handsome reprint of four of Walt Whitman's poems on the death of Lincoln. An excellent photogravure portrait of the President is prefixed, and the "Gettysburg Address" is placed on one of the front pages as a kind of motto.

Marion Harland's two volumes, "Some Colonial Homesteads" and "More Colonial Homesteads," have been reissued by Putnams within a single cover and entitled "Colonial Homesteads and Their Stories" ($3.50). Both text and illustrations render the publication in its present form a suitable gift book.

DISRAELI.

The Life of Benjamin Disraeli. By William Flavelle Monypenny. Vol. II, 1837-1846. New York: The Macmillan Co. $3 net.

The delay in the appearance of this volume—it is two years since Vol. I was published—is said in the preface to be due to "reasons of health." Unfortunately, the author's death soon followed, so that a new mischance has befallen what seems to be the ill-starred official biography of Disraeli. Lord Rowton, private secretary and biographer designate, died without doing anything more than amass materials; and now Mr. Monypenny has passed away, leaving the work less than half done. Regret at this will be the deeper for the proof of his quality that he had given. Besides sufficient literary skill, he had the good judgment and complete honesty which made him just the biographer one would desire to have the handling of the Disraeli papers. While the present volume is not steadily maintained at the high level reached by the first, it carries on the narrative in a way to sustain its interest, and witnesses throughout to Mr. Monypenny's industry and literary integrity.

Vol. I ended leaving Disraeli on the threshold of Parliament, and in these pages we see him proceeding to the slow conquest of the House of Commons. The familiar story of his "maiden speech"—the future great orator making a mess of his first attempt, and sitting down in mortification with "the time will come when you will hear me"—is set straight. Disraeli had no lack of *aplomb.* He would have made a good speech if the House had let him. But his dandified manners, his reputation as an adventurer, and the literary taint upon him had created a violent prejudice against him among the members, and they howled him down. "The scamps of Radicals," wrote Lord Lyndhurst to Disraeli, "were determined that you should not speak. I am sure you have the courage to have at them again." He had; and it was not long before his jaunty wit, his irreverent epigram, and his stinging sarcasm won him both a ready hearing and a heightening admiration. By a year from his "failure," Disraeli was writing to his sister of a successful speech in the House. "All the squires came up to shake hands with me. They were so grateful, and well they might be, for certainly they had nothing to say for themselves." So soon are we put on the track of one great reason for Disraeli's rise to the leadership of the Tory party. He could speak for inarticulate followers.

In this volume Mr. Monypenny had to grapple with two problems closely affecting the estimate of Disraeli's character. One has to do with his marriage. The other concerns his rather abject application to Peel for office, with his subsequent audacious denial that he had ever made it. Disraeli's marriage to Mrs. Wyndham Lewis, the widow of his former colleague from Maidstone, a lady considerably older than himself—but with a fortune of $20,000 a year, while he was almost hopelessly in debt—has often been characterized as purely mercenary. It was only partly so. "Dizzy married me for my money," his wife used to say jestingly; "but if he had to do it again he would do it for love." There was a shade of truth in both assertions. Disraeli was not wholly blind to pecuniary considerations in the match. After his suit was accepted there was a quarrel. The letters that passed are given. Mrs. Lewis reproached him for thinking only of her house and social station and fortune. He retorted that this was not true, and that if he had really been a fortune-hunter, he should have flown at much higher game. A reconciliation soon came, and a life of almost ideal married happiness followed. She was just the wife for him—as he testified again and again—and no husband could have been more devoted and lover-like than he. All things considered, we must agree with Mr. Monypenny that "the judgment of the world" respecting Disraeli's marriage is "in need of revision." The material for it is here supplied in letters and other evidence.

When Sir Robert Peel formed his Ministry in 1841, Disraeli wrote him a letter begging for "recognition"—that is, for office. Mrs. Disraeli wrote to the Prime Minister at the same time, without her husband's knowledge, she stated. Peel could find no place for him. There is a story that he would have given him something had not Stanley threatened to leave the Cabinet if "that scoundrel" were taken in. Be this as it may, Peel refused Disraeli. On this ground, or for more public reasons, Disraeli began his famous series of attacks upon Peel. When the latter was most virulently assailed by the gibes and flouts of the other in 1846, he remarked that Disraeli's opinion of him could not have been so low in 1841, when Disraeli applied for office. Disraeli flatly asserted that he had never done so. But there was his explicit letter! It was afterwards found among the Peel papers, and was first published fifty years later. What have the apologists of Disraeli to say? There have been many weak attempts to explain away the sheer contradiction. Wilfrid Meynell, in his Life of Disraeli, intimates that Peel's charge came so suddenly that Disraeli "showed an ambling unpreparedness." Other shifts have been tried. But none of them would do for so honest a biographer as Mr. Monypenny. He examines all the evidence, and then records the verdict: "Having asked Peel for office in 1841, Disraeli in 1846, not to press the other occasion [there was another], publicly denied that he had done so; and he must pay the full penalty."

The old puzzle why Peel did not produce the letter and crush Disraeli on the spot, is not discussed in this volume. Perhaps it cannot be solved now. One knows the story of Peel being found late the night of the encounter looking for the letter and not being able to find it. But the Duke of Newcastle personally told Goldwin Smith that, "calling at Peel's house on his way to the House of Commons, he had been shown by Peel, who took it from his bag, a letter from Disraeli asking place." Thus there was at least a basis for the theory of Peel's "magnanimity," or scruple about giving out a personal letter. Its publication by Mr. Parker in his Life of Peel was resented by Augustine Birrell on the ground that it prevented Peel's magnanimity from being "complete and eternal." "Disraeli never pretended to be a man of nicety," adds Mr. Birrell. "He ate his peck of dirt." Peel may have thought to despise his railing, as Pericles scorned to notice the low fellows who insulted him. Another source of inward satisfaction is hinted at by Lord Rosebery when he writes that Peel had "the solace which might be derived, under the philippics of an alienated supporter, from the possession of the orator's application for office."

But Disraeli himself recorded in 1836 an instance of Peel's staying his hand when he might have smitten an opponent to the ground. It was Hume of whom Peel said, according to Disraeli, "I might have risen and crushed him, the impudent dog." Disraeli wondered: "Why did he not?" Why did not Peel rise and crush Disraeli, ten years later? It is a question touching the psychology of public men that Mr. Monypenny did not seek to answer.

The ten years of English political history covered by the volume were stirring. It was the period when the agitation against the Corn Laws reached its climax in success. Public debate was keen and party spirit ran high. It was a time when such an audacious genius as Disraeli might easily make a name for himself. He has somewhere recorded the saying that a public man who is also a man of letters has a two-edged weapon. This volume shows him wielding his. He spoke and he wrote. His speeches in the House and on the hustings won him a fame that was extended and rendered more piquant by "Coningsby" and "Sybil." These political novels are analyzed and cited by Mr. Monypenny at disproportionate and needless length. This is one of the *longueurs* in the volume. Disraeli did, indeed, put his political ideas, as well as his portraits from life and his satirical flings, into these writings; but they were the same ideas which he embodied in many a speech. They depended in part upon a reading of English history in the sixteenth and seventeenth centuries which Mr. Monypenny admits to have been forced or fanciful. But he himself gets into historical difficulties when he seeks to make it out that Disraeli's attitude towards the Corn Laws and towards protection in general was somehow prescient of the modern protectionist revival in England. He implies blame in Disraeli for taking a wrong view of Charles I in order to explain "Young England." But he himself perversely reads present conditions back into the state of mind of protectionists sixty years ago. We cannot go into this, but Mr. Monypenny's effort to re-write economic history from the standpoint of the latter-day British "tariff reformer" is tedious and wholly inconclusive.

The chief interest lies in the unfolding of Disraeli's talent for public life. At forty he does not perhaps make so vivid an impression of sheer genius as at twenty-five, but the proof of his enormous cleverness multiplies. He never lost consciousness of it. In these years of heightening recognition he was as vain as a boy of every mark of approval or scrap of flattery given him. He was continually writing them down for his wife or sister. At the close of one self-satisfied letter he wrote, "Burn this egotistical trash"; but if it had been burned, twenty others as stuffed with vanity would have remained. It is hard to recall any other man of first-class ability who so steadily wrote of himself with such extreme complacency. "I made an admirable speech," "They tell me that nothing finer was ever heard in the House"—such is the recurring note. But Disraeli's vanity was buoyed up by great courage, perfect coolness under fire, and an audacity that never failed him. His crest contained the motto, *Forti nihil difficile:* which his enemies early translated, "The impudence of some men sticks at nothing." Disraeli's did not. From his first years in Parliament he acted upon the theory, which he thought he had worked out in the case of Croker, that "men of a certain age like the young ones who lick them." He broke lances with Palmerston. He tilted at Graham and Stanley. Finally, he determined to "strike at the highest," and entered upon his series of speeches against Peel. Some of these were highly effective in themselves; but the laughter and roars of applause which they evoked in the House were partly factitious, and evinced the deepening hatred of Peel on the part of his own party followers, as they saw him swinging to free trade. Nobody else could level such barbed taunts at him as Disraeli, and so nobody else got such cheers from them. But Mr. Monypenny somewhat exaggerates the part which Disraeli took in the fall of Peel. It would not be accurate to say that Disraeli "overthrew" Peel. His wit and invective doubtless accelerated the Prime Minister's defeat, but that was mainly caused by the bold attacks of Lord George Bentinck, marshalling the great Tory families. Disraeli was unable to take Peel's place. He did not become recognized Tory leader till 1849, three years after this volume closes. In reality, his rise was not so rapid as his undoubted powers would have seemed to warrant. The reason is not concealed by Mr. Monypenny. Disraeli was not trusted. He would have gone higher more quickly if his character had stood higher. Mr. Monypenny again reminds us that it is always dangerous to take any statement of Disraeli's literally. It is shown that he lied unblushingly to his constituents about his debts, which were for years mountainous and harassing. The fact was known, and hindered his advancement. For a long time the air of being an adventurer clung to him. So he had, with all his showy talents and solid parts, to fight his way slowly. He was frantically applauded long before he was confidently followed.

In general, Mr. Monypenny shows more zeal in defending Disraeli's brains than Disraeli's morals. But his frankness and his literary conscience would not permit him to praise highly Disraeli's style at this period of his life. It was not bettered by Parliamentary speaking. And in the novels there is "less simplicity" and "more affectation." "It is one of the many contradictions in Disraeli's mind and character that, in spite of his strong grasp of fact, his keen sense of the ridiculous, and his intolerance of cant, he never could quite distinguish between the genuine and the counterfeit either in language or sentiment." This is a hard saying. Even when the author is whole-hearted in praise, he leaves the reader to see the evidence of something lacking. For example, he speaks in the highest terms of Disraeli's extraordinary grasp of foreign affairs at this time, and of his anticipating future developments. Yet he records Disraeli's sneer, in a confidential paper of 1842, at "Lord Aberdeen's mystical hallucinations of German nationality." Evidently, foreign politics had not in Disraeli attained the rank of a science able to predict!

The reviewer cannot lay down Mr. Monypenny's book without again expressing regret that so competent a biographer was not permitted to trace for us the rest of Disraeli's career.

CURRENT FICTION.

The Reef. By Edith Wharton. New York: D. Appleton & Co.

In his recent book on "Play-Making," Mr. William Archer has a chapter about "blind-alley themes": themes from which there is no proper exit, problems of which "all possible solutions are equally unsatisfactory and undesirable." This does not mean simply that there is no way out through the door of stage convention, or that every conceivable exit is "unpleasant." It means, says Mr. Archer, that "there is no possible way out of them which is not worse than unpleasant: humiliating and distressing."

It is to the advantage of the dramatist that he must be on guard against such themes, that he must take care not to present life as a disheartening muddle. The novel, in its relatively fluid and indeterminate state, is as yet hardly conscious of this friendly inhibition. A novelist has, and ought to have, a freer hand than a playwright. It is his compensation for the want of that vivid and active contact with his audience which the playwright enjoys. But he may well bear in mind the caution addressed to dramatists by Mr. Archer: "The crimes of destiny there is some profit in contemplating; but its stupid vulgarities minister neither to profit nor delight."

Mrs. Wharton's chief failing is her addiction to themes of this type. The story of Lily Bart was not only disagreeable: it was depressing and humiliating. She was a victim of the stupid vulgarities of fate. The only way of releasing her from helpless and meaningless torment was the too easy way chosen by Mrs. Wharton, the way of death. It is not surprising that even the services of an expert playwright failed to make a successful play out of such material. Mrs. Wharton does not hesitate to make use of expedients which the stage is laughed at for tolerating. Lily's over-dose of chloral is one; an habitual employment of the "long arm of coincidence" is another. Miss Bart makes one visit to the rooms of Lawrence Selden, and is once lured to the house of Gus Trenor. Both times her departure is seen by acquaintances who happen to be passing the premises at the particular moment. The action of "The Reef" turns largely on a series of similar, carefully arranged contretemps.

But "The Reef," even more clearly than "The House of Mirth," is built upon a theme impossible of dramatic solution; and in this instance the novelist neither attempts a solution nor cuts the knot. The theme, stated baldly, is this: A still young man, on his way to belated tryst with the only woman he has ever wished to marry, gets a telegram that the meeting must be put off. No explanation is given, and he is about to turn back when chance throws him in contact with a pretty girl who seems to need his help. Both are alone and adrift, and the upshot is a ten days' amour in Paris. They part amicably. Some months later the original tryst is fulfilled, and the man finds installed in his true love's house, and about to marry her stepson, the girl of the Paris affair. This is intolerable: he makes a number of feeble attempts to get rid of the girl, but without avail. It is left for her to break her engagement with the stepson, because she loves the man, and clings to the memory of their brief relation—wants to "keep him all to herself." So she disappears—but not before the older woman has learned the whole truth. Then follow a series of scenes in which the man and the woman torture each other with extraordinary ingenuity. The woman is very modern—tense, quivering, always self-conscious, often hysterical. She decides to part with the man—and on the eve of parting gives herself to him so that she may for once "be to him all" that the hated girl had been. They do not part at the moment, there are a few more chapters of emotional backing and filling, and we leave them at that exercise—well content to leave them. It is clearly impossible that they should ever be happy together—or apart. The only figure which finds its way, in a sense, out of the blind alley, is that of the girl—a figure at least braver and less forlorn than the rest. Stripped of the verbal felicities and subtleties, of the air of grave absorption in the human scene, of the elegances of social setting, which are Mrs. Wharton's familiar assets, the story is a paltry one, or nearly that.

Bubbles of the Foam. By F. W. Bain, New York: G. P. Putnam's Sons.

When, in 1899, Mr. Bain published his "Digit of the Moon," he stated in his preface that it was the sixteenth part of a Sanskrit work entitled "The Churning of the Ocean of Time," this particular portion being, according to Indian ideas, the eighth of these sixteen digits. The present book constitutes the tenth volume of the series, though the word *prīti* in its Sanskrit title is the special designation of the thirteenth digit; and we may accordingly expect, in all probability, six more volumes before "The Churning of the Ocean of Time" shall be complete. We search in vain for this work in catalogues of Sanskrit manuscripts or in histories of literature; and the poets Amara and Sulochana, from whom Mr. Bain quotes in "Bubbles," are equally elusive.

Judged simply as a story, this is one of the best of the series. Beginning with an episode confessedly similar to the opening of the Sanskrit romance of "The Adventures of Harsha," it tells how the goddess Sarasvatī was cursed by the god of Love, Kāma, to assume mortal form for smiling at a discord in his singing. Whereupon Kāma was condemned to similar punishment by Brahma, his curse being determined by the quality and period of that of the goddess. Kāma was, accordingly, born as Atirupa, the son of Jaya; and Sarasvatī as Alipriyā or Aranyānī, the daughter of King Bimba, whom Jaya dethroned and drove into a lonely forest. Atirupa grew up a spoiled young monarch of matchless beauty and unbridled desires, who when told of Aranyānī hastens to the forest, fascinates the maiden, and carries her off to his palace. Later she returns to the forest broken-hearted, and contrives to make Babhru, a woodman, who has loved her, put an end to her life. Babhru then seeks out Atirupa and kills him with the same knife that has destroyed the mistreated heroine. The soul of the prince and that of Chamu, his *vita*, or sycophant, enter other bodies, and Babhru becomes a camel, the sight of whose bones in the desert leads Çiva to tell the tale to his spouse Pārvatī.

Such is the framework for some of the most admirable character-drawing that Mr. Bain's work has yet revealed. The portrayal of the gradual yielding of Aranyānī, a maiden wise in ancient lore but innocent of knowledge of the wiles of a gross libertine, is full of pathos. Unfortunately, the record is not confined to one country or to one time. Atirupa is drawn with a less sympathetic hand, though his patient scheming to obtain his victory is not without skill. The real hero, at least in character, is Babhru, whose love for Aranyānī, whether as simple forest maid or as the cast-off plaything of a king, is a thing of exquisite beauty.

Yet, despite the beauty of the whole, there is much in the volume that seems non-Indian; in fact, distinctly Occidental. The phraseology lacks in great part the subtle Sanskrit flavor that marks the earlier volumes of the series, though genuine bits of Indian simile are frequent. But the most serious criticism centres in Babhru. To the Occidental he is very attractive, but—he is a woodman: and unless the "Churning of the Ocean of Time" is tinged with Buddhism, though it is uncompromisingly orthodox and Çaivite in tone, such a drawing is almost impossible for a low-caste character. The love of Babhru is almost too noble to be Indian, with whom love is very likely to be of the earth earthy, particularly in the case of the sterner sex.

My Dog and I. By Gerald Sidney. With numerous illustrations by the author. New York: Henry Holt & Co.

On the higher levels of humor the modern Englishman (in the face of table) is quite worthy to associate with us. But we seem to be conversant with intermediate levels of which Englishmen are hardly aware. We do not necessarily pass direct from a subtle smile to a guffaw. We find a considerable range of amusing performance between Rip Van Winkle and the Rogers brothers—between the pleasantry of Mr. Howells and the pleasantries of Messrs. Mutt and Jeff. Outside of the "homes of burlesque" and the pages of the comic supplement, we are distinctly on guard against mere facetiousness. It is safe to say that the publishers of the present book would not dream of publishing a book of similar character by an American author. It was a generation ago that "Helen's Babies" took us by storm.

"Helen's Babies," after all, had a human element. The naughty children were not mere monsters of infantile depravity; they represented babyhood in a phase of comic effervescence. Mr. Sidney's dog is not a dog, but a silly contrivance of springs and fur, so manipulated as to fall into everything and knock over everybody on a specially prepared stage. In short, he is the dog of the comic supplement, elevated to the post of hero in a narration of some length. The deeply humorous nature of the incidents which make up that narrative may be gathered from the opening episode: Old gentleman shut in portable Turkish bath with dog. Dog turns up wick of kerosene stove which generates steam. Old gentleman coated with lampblack, which daughter tries to remove with lavender water, but uses copal varnish by mistake. Practical joker, posing as physician, sends old gentleman to hospital, registering him as a colored missionary. And so on: a *jeu d'esprit* which may be recommended to the taste of the ten-year-old whose sense of humor does not find itself sufficiently developed to appreciate the relative subtleties and delicacies of "Peck's Bad Boy."

THREE BOOKS ON JAPAN.

The Creed of Half Japan. Historical Sketches of Japanese Buddhism. By Arthur Lloyd, M.A. New York: E. P. Dutton & Co. $2.50 net.

The Japanese Nation, Its Land, Its People, and Its Life. By Inazo Nitobé, Ph.D., LL.D. With a map. New York: G. P. Putnam's Sons. $1.50.

American-Japanese Relations: An Inside View of Japan's Policies and Purposes. By Kiyoshi K. Kawakami. New York: F. H. Revell Co. $2 net.

These three volumes add appreciably to our understanding of Japan and suggest visibly by their issue in the same year the increasing attention paid by serious readers to the deeper currents of thought affecting the renovation of the Empire. The first on the list before us is the work of a man who admirably represented the highest type of the scholarly missionary to be found here and there in all the "fields" outside of Christendom. A graduate and sometime dean of Peterhouse, Cambridge, he taught in both Canada and Japan in mission and Government colleges, ending his brilliant career in the prime of life before this volume appeared from the press. The scope of this his most mature and carefully considered publication is much broader than its title indicates. It is a study of the sources and development of that form of Buddhism which found its way across the continent of Asia to Japan, and as such it takes its place as a contribution of the first importance to our knowledge of the Mahâyâna, the later and amplified Buddhism which spread over northern and eastern Asia. The limitation which renders this work a special treatise rather than an exposition of the whole subject lies in the fact that the author's sources are entirely Japanese. These comprise, indeed, translations from Sanskrit and Chinese writings, but much will have to be learned from original works in these and other Asiatic languages before the growth of the doctrine is adequately revealed. The subject is profoundly involved in the history of long periods of mediæval Asiatic history about which the world as yet knows next to nothing.

Professor Lloyd's chief contribution to the history of Buddhism consists in his support of the theory that the Mahâyâna was largely mixed with Christian doctrines, and that its two early apostles, Asvagosha and Nâgârjuna, identified Sâkyamuni with Christ. Perhaps he presses his contention to extremes when he finds two disciples of St. Thomas in the priests from India encountered by the commissioners from the Chinese Emperor Ming-ti dispatched to look for a fulfilment of his dream; but his arguments supporting the conjecture are worth considering. The later spread of Manichæanism and Nestorian Christianity towards the East renders the supposition historically possible, and some modern Japanese students are disposed to entertain it; but the careful scholar will await further evidence.

The second half of this volume summarizes briefly and lucidly the changes in institutional Buddhism after reaching Japan. Buddhism there played a great rôle, but it earned its bad reputation for hypocrisy and avarice when the fighting men of the country turned in disgust from their ghostly advisers and made what shift they could to direct their lives without the support of any revealed religion whatever. No book that has yet been written explains as clearly as this the underlying causes of that lack of faith and of spiritual ideals which has rendered a sensitive and deeply emotional people generally insensible to the natural longings of the soul.

Yet, though wanting in a religion which appeals to the mystical needs of the individual, the nation responds better, perhaps, than others to the *bushido* which is the soul of a whole people. By a felicitous coincidence, the inventor of a concrete expression for that unified impulse is the author of the next book in our triad. Professor Nitobé's "Japanese Nation" is made up of twelve lectures delivered during the last college year as exchange professor in this country. It would be unfortunate if the suspicion that occasional addresses must imply conventional commonplaces should keep any one from reading this volume. These chapters epitomize the mature opinions of a highly trained teacher upon the characteristics, problems, and condition of his nation as a whole. While there can be nothing final in the verdict pronounced by even the most acute thinker upon a race of which he is a member, his judgment has great value as an interpretation of his own people to the outside world in terms which are readily understood by his audience. It is what we desire to know of a foreign culture told to us with a charm and precision of diction that can fairly be called astonishing. In a brief notice such as this a single illustration of the author's style and philosophic temper will reveal the quality of his book with more propriety than an inevitably condensed discussion:

> The sense of beauty extended horizontally generates art, and the same projected upwards paints and carves a religion. When I speak of my people as deeply imbued with a religious sentiment, please note that I lay particular stress on the term *sentiment.* They are sentimental and artistic, and among their higher sentiments and elevated tastes are a religious taste and sentiment. This is far from saying that they are so swayed by religion that their very sentiments and tastes are governed by it. Our zeal will not manifest itself in the same manner as it does among the Jews and the Spaniards, the Hindus or the Arabs. We are too matter-of-fact in our every-day life to

> become zealots; but should persecutions arise, martyrdom would be hailed in heroism rather than in faith, and death courted as an honorable exit from this life rather than as an entrance to the next. . . . The Japanese conception of religion is clear in spots but generally vague. It begins in instinct, gains volume in sentiment, and grows in strength by emotion.

It would be unfair to apply this to Japan in her earlier historical development, for Buddhism at one time made her really religious. Her "sentiment" to-day does not imply conviction, without which there is no true religious life. But no better clue to the riddle of her modern attitude has ever been couched in language intelligible to the Western world.

Professor Nitobé records his regret that he did not confine the field of his lectures to the relations between Japan and the United States, but he consoles himself with the reflection that a countryman had accomplished this task ere his course was concluded. Mr. Kawakami's "American-Japanese Relations," the book to which he refers, if less flattering to his American readers than Nitobé's, is a carefully reasoned argument supporting the Japanese contention in regard to Manchuria, Korea, and the immigration question. The volume is in line with several that have been written the past four years on international political questions in the Far East. None of them has yet passed from the arena of politics to that of history, and while they admit of differences in opinion, a plea for the Japanese position is eminently opportune. The attitude of Japan in upholding her treaty rights to use the South Manchurian railways and to forbid the building of competing roads is fairly upheld. The author's premise that Manchuria comes to Japan as a reward of victory, and that Japan is entitled to recoup herself for the cost of a great war by enjoying all the privileges of her position there, is the basis of an argument from which all the rest flows logically. On this ground he not only combats, but pours contempt upon Secretary Knox's proposal to neutralize the Manchurian railways. Perhaps the plan was politically impracticable; it was certainly presented in an unconventional way which unhappily invited discomfiture; but it offered safeguards for the open door and for preserving peace in the province that another generation may regret were not accepted. The justification for Japanese action in Korea is cogently urged. Mr. Kawakami is more temperate in upholding the policy of his country here than are some of her American admirers, and on this account his reasons for annexation appear to be more convincing. As to his relation of the treatment of Japanese in America, his intimate familiarity with the story derived from his residence in California, and the excellent taste with which it is told, make of this portion of his book a contribution of interest and value to the literature on the subject.

The American Mind. By Bliss Perry. Boston: Houghton Mifflin Co. $1.25 net.

These lectures, originally delivered before the Lowell Institute and elsewhere, are in the pleasant and often suggestive vein which is characteristic of this writer. Mr. Perry is not a robust critic. He is insinuating, sympathetic, eager to find objects for admiration and to communicate his enthusiasm. This is a praiseworthy and necessary type of commentator. But Mr. Perry's enthusiasm is not always under control. He has a way of preparing solid foundations for a critical structure—and then building a castle in the air. And he sometimes succumbs to the temptation of the special pleader.

These papers, for example, are written from the conviction that a distinctive American "mind," or point of view, exists, and has existed from the earliest colonial times. "Certain epochs of our history," he says, "have been peculiarly 'American,' and have furnished the most ideal expression of national tendencies." He proceeds to select three such periods: "the first vigorous epoch of New England Puritanism, say, from 1630 to 1676; then, the epoch of the great Virginians, say, from 1766 to 1789; and finally the epoch of distinctly national feeling, in which New England and the West were leaders, between 1830 and 1865. Each of them has revealed, in noble fashion, the political, ethical, and emotional traits of our people; and although the first two of the three periods concerned themselves but little with literary expression of the deep-lying characteristics of our stock, the expression is not lacking."

Thomas Hooker's sermon on the "Foundation of Political Authority" and John Winthrop's grave advice on the "Nature of Liberty" are the two examples of the literary expression of the first period adduced by Mr. Perry. They wrote, he says, "before our formal national existence began," but in feeling and essential character, when compared to Jefferson and Lincoln, representatives of the later periods, they "are not so unlike as one might think." The works cited "are political in their immediate purpose, but, like the speeches of Edmund Burke, they are no less literature because they are concerned with the common needs and the common destiny." In short, Hooker and Winthrop and not a few of their contemporaries produced literature, and produced it as Americans, not merely as provincial Englishmen.

As for the term literature, Mr. Perry is sufficiently explicit in his broad use of it. But when he implies that the seventeenth-century colonial American literature differed radically in the quality of its Americanism from the twentieth century colonial American, we are not able to follow him. "Canadian literature," he says, "has remained to this hour a 'colonial' literature, or, if one prefers the phrase, a literature of 'Greater Britain.'" So, for anything that Mr. Perry has to adduce to the contrary, was the literature of the British colonies in the America of the seventeenth and at least half of the eighteenth centuries.

The instance may serve to suggest Mr. Perry's limitations. Throughout these lectures he is graceful and genial, and often ingenious. He opens various doors of hopeful speculation as to the present and future of American life and letters. But his instinct is that of the familiar essayist rather than of the critic.

The Inn of Tranquillity. By John Galsworthy. New York: Charles Scribner's Sons. $1.30 net.

Mr. Galsworthy's new miscellany consists of reprints from periodicals in two divisions headed, respectively, "Concerning Life" and "Concerning Letters." Of the eighteen papers in the first division, six characteristically are sketches of poverty, among which two narratives, "Quality" and "Panel I of the Grand Jury," achieve a directness and poignancy like Mr. Kipling's. Eight papers may be roughly labelled "eclogues," sketches of land and water, rural pursuits and meditations, in most of which the matter, after crystallizing into numberless perfectly defined shapes, ends in a state of total liquefaction, the solvent being either literal twilight or mist or some far-reaching mystic generalization. Of the four remaining papers, the best, "Memories," is a very clever but labored memoir of a spaniel, somewhat injured like other parts of the volume by the author's determination to wring the last drop of significance from a half-willing subject.

In the eight papers, "Concerning Letters," Mr. Galsworthy pleads with eloquence and insight for freedom, for self-expression, for self-discipline, for the "detachment" which leaves the moral to the fact itself or to the public, for the rights of the unpalatable truth. In "Some Platitudes Concerning Drama" it is suggested that our renascent drama will flow in two distinct channels, the "broad and clear-cut channel of naturalism" and a poetic-prose drama disclosing "the elemental soul of man and the forces of Nature." In "Vague Thoughts on Art" the author finds the touchstone of art in the impersonality of the induced emotion, and identifies the power that evokes this feeling, not with beauty, but with rhythm or vitality. He distinguishes realism and romanticism by their ultimate aims, the first seeking primarily enlightenment, the second primarily delight—a view unfortunate, perhaps, in removing the ground of distinction from the concreteness of works to the shadowland of motive.

Mr. Galsworthy is averse to the mechanism of logic, and he softens its angularities in these papers by casting his argument into more flexible and sympathetic forms, sometimes painful but penetrating symbolism, as in "A Novelist's Allegory," sometimes Fieldingesque irony, as in the excellent mock defence of the "Censorship," more often meditations or reveries, dashed here and there with landscape: in the shelter of these devices he glides into his subject with the litheness characteristic of his mind. The results are not unhappy, though vague thinking certainly occurs.

The reader closes the book with a feeling that hardly more than two other living authors could crowd into a handful of miscellanies an equal wealth of thought and of original and felicitous language; yet his enjoyment is not quite unqualified. Two points of doubt suggest themselves. In the sketches of poverty, the misery is dilated, not perhaps beyond the facts, but beyond that view of the facts which incites to courageous endeavor. The spectator in these vignettes (he is omnipresent, by the way) is always pensive, always passive, prone to lose himself in what might not unfairly be called an intoxication of pity. The result proves how readily misery, like alcohol, may figure successively as stimulus, irritant, and sedative. The basis of effective sympathy, as of effective selfishness, is hope. Furthermore, the style is not impeccable. Mr. Galsworthy's almost unlimited command of original and beautiful phrases has not protected his English against trivial originalities and pinchbeck ornament. Finding the word "individuality" banal, he resorts to the meretricious "flower of author"; his nights are "sweetly hot," and his "warmth" is "golden" and "silky" in the same breath. Poverty might excuse these lapses in another; in Mr. Galsworthy they are as vexatious as a false diamond on the shirt-front of a proprietor in Golconda.

Troy: A Study in Homeric Geography. By Walter Leaf. New York: The Macmillan Co. $3.50 net.

When Dr. Leaf finished his second edition of the "Iliad" he made his first visit to Troy and was struck by the prosaic appearance of the landscape. The low and marshy banks of its mean rivers and the long, flat top of Ida could not appeal to a poet familiar with Taygetus, Parnassus, Tempe, and Olympus in Europe, or with Adramyttium, Smyrna, Miletus, and Ephesus in Asia. The problem was forced upon him of explaining why a poet chose the Troad for the scenes of the "Iliad," and also why this insignificant hillock of Hissarlik had been the early seat of a wealthy and cultured people, and then in historical times had been neglected or remembered solely in poetry.

This problem brought him back to Troy in 1910, when he became convinced that the despised Catalogue of the Trojans was an authentic record, revealing not only the military forces, but also the trade routes to which Troy owed her greatness, a greatness conditioned solely by the ability to block the Hellespont. Again, in the spring of 1911, he returned, and under unusually favorable conditions visited in the Troad and surrounding districts nearly all the places named in the "Iliad." On the basis of his exact knowledge of the poetry and its setting he has reached the following conclusious: Troy and the Troad are described from true historical knowledge; the Trojan Catalogue is an authentic document unchanged from the first, and is the reason for the Greek Catalogue; Hissarlik, in its elevation, winds, trees, shrubs, flowers, gulleys, streams, knolls, and general landscape, fits the setting of the "Iliad" in all the minutest details. In discussing how strikingly the account of dragging Hector's body agrees with the topographical conditions of the city, he says: "One thing at least has passed for me beyond all doubt: that the poet who wrote these lines has put into living words a tradition founded on real fighting in this very place."

The Catalogue places the allies of Troy in five distinct regions—the Troad, upper Ægean, shores of the Pontus, Mysia and Phrygia, and the south and east to the extreme limits of Lycia. All these lands, before the Greeks obtained a footing in Asia, belonged to the same commercial group with trade routes radiating from Troy. The raw products of the Pontus and Thrace must be exchanged for finished wares from the south, while the merchants of Lycia, shut off from the west by the growing power of Greece, must look to Thrace and the Pontus for an outlet for their goods, and also as the source of their supply of natural products. Troy, by holding fast to the Hellespont, could force all this trade to come before her walls. The city herself took no part in commerce or industry, but, because of her position, was able to levy tribute on all trade to or from the Hellespont, even the Greeks who wished to share therein must pay the price. The secret of Troy's greatness was the fact that she controlled the very centre of early commerce and grew rich by levying tribute.

The Greeks had forced their power and trade as far as Rhodes; Asia was the next step, but, with Priam in control of the Hellespont and demanding tribute, advance was impossible. Commercial conditions made the war inevitable. The allies of Troy had unequal interests in the issue, those who sold raw produce could find other markets, and accordingly they were indifferent or fought for hire; but the Lycian traders saw that their fate was involved in the fate of Troy, for with Rhodes in control of the Hellespont their industry would be ruined. This explains why two kings of Lycia fought at Troy and why Hector is so often urged by them to greater bravery. Incidentally, this gives the Lycians a place in the first conception of the "Iliad" and destroys the theory that they are a late addition.

The Trojan War was then a great struggle for the key to commercial supremacy and must have been fought in the place and by the peoples named in Homer. Accordingly the "Iliad" is a real record of a real event, and is not, as generally assumed, the exaggerated description of the struggles of small bands of settlers. Dr. Leaf has given the war a reason and a background worthy of the poem. When Troy lost the power to levy tribute on the trade passing by the Troad her career was ended, this power never returned, therefore the city never revived. This too is a shrewd and convincing reason for the poor part played by Troy in historical times.

The bulk of this book is devoted to presenting to English readers the results of the work done by Dörpfeld, as published in his "Troja und Ilion," with a discussion of the importance of subsequent study and excavation. The accuracy and trustworthiness of all that concerns Troy is assured by the fact that the proof-sheets were revised by Dörpfeld himself. There is now little need to consult the German original.

It is worth noting that this unusually important contribution is not the work of a professional scholar, but of a banker who has devoted himself to business with success and fidelity.

The Lighter Side of Irish Life. By George A. Birmingham. New York: Frederick A. Stokes Co. $1.75 net.

Again the familiar suspicion assails us that we have before us the 'prentice work of a writer whose recent popular success has rendered him available, from the publisher's point of view, in almost any form. Or is this merely a fresh illustration of the relative awkwardness with which an easy story-teller often expresses himself when he comes to attempting the essay? The author of "Spanish Gold" and "Priscilla's Spies," with their spontaneous and irresistible fun, might have been expected to enjoy himself, and make us enjoy him, as an informal commentator on Irish manners. In fact, we get the impression of a gentleman uneasily grinding out copy, and wishing himself better employed.

The first chapter, As Others See Us, is painstakingly executed in the paradoxical manner now popular in London. The English, says Mr. Birmingham, modifying a remark by Mr. W. B. Yeats, "are always most generous in endowing us with amiable characteristics which they do not care to claim for themselves." Sentimentalism, wild gayety, irresponsibility, facile charm of manner, eloquence, amorousness, are some of the qualities foisted upon the Irish in this way. The Englishman does not want them. He prides himself upon being practical, staid, and constant—free from the weaknesses which are pardonable and even admirable in "wives, daughters, and people of inferior races." Also in the puppets of fiction: "We supply for the novelist a long-felt want, and are fitted to play in his stories just those parts which throw into the strongest relief the stable worthiness of the ideal, and, I fear, equally mythical, Englishman. The reader of contemporary fiction can hardly fail to be struck with the fact that a dash of Irish blood in her veins is now considered necessary as an explanation of the charm of a heroine, that true gallantry in a hero can only be rendered credible by providing him with at least a grandmother who belonged to an old Irish family." This is amusing and has sufficient truth in it for the casual purposes of the familiar essayist. But when we are assured that the Irishman is not a sentimentalist, that he is not particularly brilliant, or charming, or gay, or irresponsible, and that he is more constant in love than his English cousin, we incline to ask for stronger evidence than is forthcoming. It is not to be found in Mr. Birmingham's own novels, which, as we recall them, quite cheerfully present, with superior verisimilitude as to brogue and costume, the Irishman of literary tradition. It is not to be found in the present series of sketches. George Meredith is named as largely responsible for that tradition, and Thackeray is praised for having painted, in his O'Dowds and his Costigans, the sober, reliable, and calculating Irishman of truth. But it is notable that several times in the course of these pages Mr. Birmingham mentions with approval Mr. Flurry Knox, of the "Adventures of an Irish R.M.," as a true embodiment of Irish character; and his own people are plainly akin to Meredith's O'Donnells rather than to Thackeray's O'Dowds.

Three of these chapters stand out from the baker's dozen as distinctly more than collections of anecdotes—chapters on The Brogue, Old Customs and Superstitions, and The Yank: the last being a study of the Irish-American from the Irish point of view. The sixteen pictures in color which adorn, rather than illustrate, the text, are charming in themselves.

BOOKS FOR CHILDREN.—II.

The following books will hold boy readers, and men readers, for all that: "The Boy's Book of Modern Marvels" (Stokes), by C. J. L. Clark, sings the song of a concrete age, with electric giants bringing remote corners of the globe closer together. The story of presses, lighthouses, buoys, docks, engineering feats, and so on, is an absorbing one. Such an encyclopædia as Lieut. Dorling's "All About Ships" (Cassell) will find ready readers; as will Thomas Corbin's discourses upon "The Romance of Submarine Engineering" (Lippincott). Glen H. Curtiss's "Aviation Book" (Stokes) is detailed in its discussion of biplanes, and breathless in its narrative of flights. The life of Curtiss is given—a life which will afford every village aviator hope of distinction. Dutton has imported "The Boy's Playbook of Science"—physics and chemistry in agreeable form. In a discussion of what man has done to conquer the unconquerable, we cannot overlook Major-Gen. A. W. Greely's "True Tales of Arctic Heroism in the New World" (Scribner), wherein the heroes of ice and snow are authoritatively discussed. These exact accounts are filled with character, and in one chapter Lady Franklin figures as a heroine.

"Housekeeping for Little Girls" (Duffield), by Olive Hyde Foster, is a simple study of domestic science; Hedwig Levi's "Work and Play for Little Girls" (Duffield) is a companion volume, and illustrates what may be made from seemingly impossible things, such as match boxes, shoestrings, and the like. Ida E. Boyd has written for Moffat, Yard, "When Mother Lets Us Cut Pictures." A story is told by some one and illustrated by cutting figures and objects out of white paper and pasting them on a black background.

Ernest Rhys has done some judicious gathering in "The English Fairy Book" (Stokes). National differences are very easily detected in the decorative editions of Hauff's "Caravan Tales" (Stokes), Post Wheeler's "Russian Wonder Tales" (Century), and Alan Whitehorn's "Wonder Tales of Old Japan" (Stokes). A charmingly printed and pictured book is Lilian Gask's "The Fairies and the Christmas Child" (Crowell), the artist being Willy Pogány. As an example of book-making, this last is to be commended; the type is soft and clear, the line drawings delicately traced. John Harrington Cox has literary sources for his "Folk Tales of East and West" (Little, Brown); he has retold stories from Early Middle English, from Old French, from Dutch (unwisely the legend of "Sister Beatrice"), from Chaucer, from Layamon's Brut, and from the Apocrypha. These stories, so the author declares, have been tested and proved successful; what is more, the majority of them have never been adapted for children before.

Among the so-called religious books, L. T. Meade's method of writing "Stories from the Old, Old Bible" (London: Chambers) seems to be unfortunate, in fact bad in taste. Sixteen sections of the Old Testament are used, the tales being transformed into intimate reminiscences told by Eve and other characters of note. This is an importation. Mrs. Margaret Sangster's contribution to the season's welfare is "Eastover Parish" (Revell), which traces the life of a real parish with people in it known to the author. This is, therefore, a bit of autobiography. George Hodges's "The Castle of Zion" (Houghton) likewise retells stories from the Old Testament in direct narrative style. We wish such books as these would shed more light and be less sweet, for with all their circulation, children in our schools still remain in blind ignorance of the Great Book.

We trust our readers will sympathize with the reviewer who approaches juvenile fiction with some misgivings. The usual types are well, even copiously, represented, and the series multiply like the spawn of the sea. The only new tendency is to cater to the Boy Scout movement, and this activity alone has brought us a row of books repeating the same details drawn from the official manual. We sound the warning to give us more story, more character, and less devotion to the dry details of the scout duties, which are as bad as the restrictions and piousness of the moralist. As representative of this class we can but mention a few. Walter P. Eaton assuredly intends, now that he has published "The Boy Scouts of Berkshire" (Wilde), to enter the field as a juvenile writer. His story draws heavily upon the manual, as does also Mrs. I. T. Thurston's "The Scout Master of Troops" (Revell), both of them manly in tone and transforming character, so to speak, while you wait.

In conclusion, we can but mention with cordiality such books as Bartlett's "The Lady of the Lane" (Century), Mary Leonard's "Every-Day Susan" (Crowell), Marion Ames Taggart's "Six Girls Grown Up" (Wilde), Belle Moses's "Helen Ormesby" (Appleton), Maria Daviess's "Sue Jane" (Century), Abbie Farwell Brown's "Their City Christmas" (Houghton), and Eleanor Gates's "The Poor Little Rich Girl" (Duffield).

Notes

The first book bearing the imprint of the new house of F. G. Browne & Co., Chicago, will be Isabel Gordon Curtis's "The Lapse of Enoch Wentworth," which will be published in January.

Dutton is about to issue an account of a tour through Palestine by the distinguished surgeon, Sir Frederick Treves. It is entitled "The Land that Is Desolate."

"The Authoritative Life of General William Booth," founder of the Salvation Army, has been written by G. S. Railton, Gen. Booth's First Commissioner. It will soon be issued by Doran.

The Rev. S. Parkes Cadman, D.D., is bringing out immediately through A. L. Chatterton Company a book on "The Victory of Christmas."

Among the books which Holt will shortly have ready are the following: Grillparzer's "Des Meeres und der Liebe Wellen," edited by Prof. Martin Schütze; "Sprach- und Lesebuch," by W. H. Gohdes and H. A.

Buschek; Mogk's "Deutsche Sitten und Bräuche," with notes and vocabulary by Prof. Laurence Fossler, and a revised and enlarged edition of Prof. H. S. Canby's "The Short Story," a textbook for college courses.

The story of "Polly of the Hospital Staff" will be continued in Miss Dowd's new book, "Polly at Lady Gay Cottage," which Houghton Mifflin will issue early next year.

Smith & Elder will shortly publish Sir Harry Johnston's "The Foreign Policy of the British Empire," which is described as being, not a history of the subject, but an account of Great Britain's present methods of dealing with other nations.

"The Crowning Phase in the Critical Philosophy," by the Rev. Dr. R. A. C. Macmillan, which is a study in Kant's "Critique of Judgment," or rather of Kant's system with that as its central feature, is announced by the Macmillans.

The professorship of Anglo-Saxon at Cambridge, England, left vacant by the death of Skeat, has been assumed by Mr. H. M. Chadwick.

Siberia is the subject of the first two articles in the *National Geographic Magazine* for November. From impressions received during a journey on the Transcontinental Railway, Major-Gen. A. W. Greely tells of its remarkable economic evolution. This is so great that he believes that within the twentieth century it will be the centre of Russian trade and commerce, mainly because it is receiving "a hardy, courageous, and resourceful immigration." Glimpses of the country from the car windows of a trans-Siberian train are entertainingly described by Mr. W. W. Chapin, illustrated by fifty-one photographs in color. Much useful information about the little known Albanians is given by T. J. Damon, of Constantinople. The remainder of the number consists of extracts from "The Balkan Question," published in 1905, one being the introduction by the Hon. James Bryce. There are 124 illustrations and two maps.

"Scenes from Every Land" is the third series of pictures taken from the *National Geographic Magazine*. Nearly three hundred in number, they show the people, natural phenomena, and animal life of all parts of the world. In the preface by the editor, Gilbert H. Grosvenor, the surprising statement is made that the National Geographic Society has a membership of 150,000, and an income of more than $350,000, of which $50,000 to $60,000 is available annually for geographical research and exploration.

Die Erde is an "illustrated bi-monthly magazine for geographical information, travels, and hunting," published in Weimar, the first number of which appeared in October. The editor is Ewald Banse, a well-known Eastern traveller and author. It opens with a record of the principal events of the previous fortnight, and then follow signed articles on different countries, those of November 1 being on Turkey and Bulgaria.

There are many scenes in Egypt which lend themselves admirably to the purposes of the artist, particularly for water-color treatment. When to high artistic ability there is added the pen of a ready writer, with appreciative eye and mind, there is a combination which has the power to produce a book of beauty and value. Such is Walter Tyndale's "An Artist in Egypt" (Doran). Mr. Tyndale is already favorably known as the author of a similar book, called "Below the Cataracts." The present volume contains eighteen pictures of scenes in and about Cairo, and nine of places further up the Nile valley. The color work is remarkably well done, and each of the pictures has charm. The text contains the observations of the writer upon a multitude of subjects and places, taken from a careful notebook of impressions. The volume offers a delightful possession for one who has seen identical or similar scenes, or for one in whom love of local color in foreign climes is well developed.

In 1901 Mr. Dwight L. Elmendorf started for the Holy Land with his camera, partly, as he tells us in the preface of "A Camera Crusade Through the Holy Land" (Scribner), to establish his wavering faith. In this latter quest he was successful, and he also brought back a number of pictures, out of which he constructed some very effective illustrated lectures on the Holy Land. These lectures, condensed into one, covering the ordinary tourist route, he has published in a well got-up volume, with one hundred of his photographs. The book is, in fact, a lantern lecture on the Holy Land. The text is printed by itself, open-spaced, excessively paragraphed, consisting to a considerable extent of Bible citations. The pictures, which occupy roughly three-quarters of the entire space, are printed full-page, each faced with a title-page of its own, which also contains from one to a dozen Bible references. The pictures are almost exclusively landscapes; all are good, and some extremely artistic.

In Dr. S. M. Crothers's latest volume, "Humanly Speaking" (Houghton), there is something more than the unifying element of a marked personality. More than the ordinary book of essays it shows the progress of a single argument. If you put aside such plainly independent studies as the delightful papers on "The Obviousness of Dickens" and "The Contemporaneousness of Rome," you find that Dr. Crothers is concerned with the evolution of the American spirit and the American conscience. The problems of the age press upon him much more lightly, of course, than they do upon us who have not the same wit and philosophy to oppose to them, but they make themselves felt, nevertheless. Dr. Crothers protests against the tyrannies of our growing social conscience, but in a way which shows that at bottom he rejoices in them. Is there one other man in this country who could have written "In the Hands of a Receiver," with its absolute truthfulness, its sympathy, and its brilliant humor? Into this paper he has incorporated a chant after the Whitmanesque manner, entitled "The Song of Obligations," which is, at the same time, a laugh at the moral frenzies of the age and a tribute to the fine spirit that underlies them. He himself offers the explanation for the spiritual unrest of the times in an excellent study of the evolution of the American temperament. He leaves us in a mood of chastened but confident knowledge of our strength and our limitations, but one can escape from that easily enough by turning back to the rollicking fun of "The Song of Obligations."

Prof. Walter L. Fleming, of the University of Louisiana, edits "General W. T. Sherman as a College President" (Cleveland: The Arthur H. Clark Co.), a compilation of letters, connected by a thread of text, between Sherman and friends North and South, during the year or so immediately preceding the Civil War. Sherman at the time was head of the seminary at Alexandria, which was the germ of the State University. For the history of that institution the book is important. Incidentally also it throws light upon conditions in the State at the time. As regards Sherman himself, however, the book merely supplements with detail a picture which was already plain. The records of the Civil War chronicle the noteworthy deeds of the stalwart captain. The "Personal Memoirs" and "Home Letters" illustrate with unusual vividness his personality. In his day of small things, his force, good judgment, and substantial manhood were what they were when he was saving the country. One follows with interest the comparatively petty incidents of such a man's waiting years, but the historic figure gains no new distinctness.

"London," says G. K. Stirling Taylor in the preface to his "Historical Guide to London" (Dutton), "is not a fit subject for a book. A fragment of it might possibly be got within the limits of a library, but even that would be a somewhat hasty glance." After which apology he proceeds in part i of his volume to give a kaleidoscopic view of the history of the city; part ii is devoted to well-chosen itineraries; part iii is a gazetteer, giving more detailed information concerning places already mentioned in the itineraries, and a very complete index concludes a book that is admirable for its purposes.

Possibly Helen Douglas-Irvine realized the truth of Mr. Taylor's dictum when she decided to compress her "History of London" (Pott) into some 360 pages of excellently clear type. The merit of her book is that it gives a brief and understandable account of the constitutional development of the city from the time of the Norman Conquest. The subject is full of complexities, and there was room for a volume which should bring together the essential facts of the story in a concise form. To this extent the author has succeeded. Her work, however, is not inspired or inspiring. Indeed, one is amazed to discover, in perusing these pages, how dull such an exciting theme as the story of London may be made to appear. In the history of the Livery foundations alone is a veritable romance of commerce; every stone of London has its tragedy; and for humor, one could wish nothing more exquisite than the frequent unheroic conduct of the city worthies in their dealings with King or Protector for the safeguarding of their interests. Nothing of this does the author bring out in her narrative.

"The Pioneer Mothers of America" (Putnam), by H. C. and Mary W. Green, is a three-volume compilation consisting of brief biographical sketches of "the more notable women of the early days of the country, and particularly of the colonial and revolutionary period," who have "been helpful in the making of history." But in order to fill so many pages it has apparently been necessary to assume that the measure of importance is the amount of information ready to hand. Hence such chapters as Wives of the Signers, Wives of the War Governors, and Patron Saints. Hence also a long chapter on Annetje Jans, whose only title to fame is that her "farm" became the subject of interminable litigation, but to whom more pages are devoted than to Ann Hutchinson, who has really some significance in history. The authors have read widely if not well; widely, in order to get together all the information possible; but not well, since the information has been used, not to estimate justly the importance of all these women, but to support the preconception that they had more importance than they have received credit for. For example, the authors have evidently read Henry Adams's essay on the Pocahontas story, but this destructive criticism only makes them cross, and they petulantly dismiss this "Cambridge Professor" as one of those iconoclasts whose only wish is to "tear down whatever of tradition exists in the form of popular ideals." John Fiske's defence of the traditional view is more to their liking, not because he has refuted the Cambridge professor, but because he appears in the light of a champion of a neglected pioneer mother. Well, the lyric tone of the volumes will doubtless just suit the temper of our earnest young suffragists, and perhaps minister to the intellectual needs of fervent, elderly clubwomen.

Ever since Madame Waddington discovered a grateful public for her stories of the everyday life of the court of the last French Empire, we have been presented at least once a year with similar revelations. The Paris of Napoleon III just before the Débâcle was an extremely entertaining place, and warmly welcomed all those who were capable and willing to contribute their share to its gayety. Madame Moulton (who after the death of her first husband became the Baroness de Hegermann Lindencrone) was the wife of an American banker residing in Paris, well connected, handsome, and possessed of a voice which could touch the hearts of Cambridge folk living peacefully on Brattle Street as much as those of German soldiers besieging Paris. Such a woman was certain of a warm welcome by a sovereign who, whatever his faults, had a most gracious gift of appreciating such accomplishments. Of the many things which Mrs. Moulton was enabled to see and to hear, she wrote to her relatives in clever and entertaining letters. These have been collected, and are now published by Harpers, under the title "In the Courts of Memory." They do not make any pretence at serious history, but they offer very agreeable reading. We are grateful that she has showed us in a common-sense way a bit of the undeniable charm of a world which is quite as extinct as the *status quo* of the Balkans.

One of the most readable and valuable of the histories of modern philosophy is that of Höffding, which has for some years been accessible in an English version. The author's subsequent abridgment of this work has now been translated by Prof. C. F. Sanders ("A Brief History of Modern Philosophy": Macmillan). As a textbook for the use of beginners, the abridgment is overcrowded with condensed expositions of the doctrines of minor philosophers; but to readers who desire such a comprehensive epitome, or who seek a concise yet authoritative work of reference on the subject, the volume may be commended. The English of the translation is poor, though fairly clear; thus, Kant's categorical imperative appears in the syntax of Potash and Perlmutter: "Act according to the maxim that you could at the same time will that it might become a universal law!" The proof-reading in the case of proper names and quotations from foreign languages is extremely bad. Some of the errors are clearly due to the author's retaining in German titles the case-endings which they had in their original context. Half the French words lack their proper accents. There is no uniformity in the treatment of the Christian names of German writers; one meets Louis Büchner, but Ludwig Feuerbach, George William Frederick Hegel, but Friedrich William Schelling. The name of a Spanish philosopher is Teutonized into Franz Sanchez. The translation throughout shows the marks of carelessness and haste.

"Romantic Days in the Early Republic" (Little, Brown), by Mary Caroline Crawford, is well printed, abundantly illustrated, and elaborately bound. It differs from most "gift books" in joining with its pomp and circumstance a fair amount of real merit. The author writes with such gusto—enjoys herself so thoroughly—that we follow her with more than the languid interest that books of this kind ordinarily elicit. Quoting freely and for the most part aptly from every manner of diarist, letter writer, and writer of reminiscences, and interfusing sprightly comment, Miss Crawford succeeds in putting visibly before us the houses, the dress, the social ways, of the more conspicuous persons living in Philadelphia, New York, Washington, Baltimore, Charleston, and other cities in "that gracious era" of the Early Republic. We are privileged to witness Washington's levees at the Franklin house, and the wedding of Peter Augustus Jay; we are in the White House when it suffers the blight of a bachelor President; and we are always in the company of beautiful and charming women. In general the author avoids small talk: rarely does she pounce upon a "delectable bit of gossip," such as that melancholy dinner when George Washington refused rancid cream and Mrs. W. "ate a whole heap of it." And even small talk, we must be charitable enough to admit, is entertaining when we are in a small mood. Miss Crawford's style, when she inserts a word—or a few pages—in somebody's diary or reminiscences, is sound as well as vivacious, and is free of the journalistic looseness and shabbiness that the insubstantial title of the book suggests. We will risk triviality in observing that her parenthetic exclamation points and interrogation marks are puerile.

It is chiefly the quaint and sometimes incomparable Japanese English of Yoshio Markino that constitutes the charm of his autobiography, "When I Was a Child" (Houghton Mifflin). Yet there is something idyllic too about the story of a Samurai boyhood in the country, and something of tragedy in the passage from reverend Confucian and Mencian teachers to underbred and ignorant missionaries. Here we have a pathetic record of the yearning for enlightenment that suddenly undermined the traditional manners and religions of Japan. Mr. Markino's bitter struggle in San Francisco before he achieved success as a painter and writer in London is humorously and lightly touched upon. It is a heartening and winning story, a book well worth reading. The author's ink sketches add attractiveness to the pages, but it is a pity to find him in an attitude of philistine misunderstanding towards the old Japanese landscape school.

E. V. Lucas's "A Wanderer in Florence" (Macmillan) is written with the deftness and amenity which we expect of the popular editor and biographer of Charles Lamb. On all matters of taste, judgment, and selection, Mr. Lucas is a capital cicerone. With a thorough overhauling in the interest of accuracy this volume would easily rank near the top among Florence guides. But Mr. Lucas seems to have a kind of genius for misinformation, and one is tempted to conclude that just as certain unscrupulous wags are said to have tried how much Vasari would swallow so our author has been undone by jocular friends. A record of sheer blunders would swell this review to inordinate length. We appreciate the difficulties of a well-meaning layman projected amid the jarring views of critics, but is not the sensible course always open of choosing one good authority and sticking to him? There are the usual cuts and a few attractive color sketches of the city by Harry Morley.

It is now eleven years since the late Dr. Samuel Macauley Jackson published a small volume of selections from the works of Zwingli in translation, using for the purpose the edition of Schuler and Schulthess, 1828-1842. At that time it was his intention to print further translations, but for various reasons the work was postponed. Meanwhile a new Swiss edition of Zwingli's writings in the original began to appear and has now made substantial progress. The present volume—"The Latin Works and the Correspondence of Huldreich Zwingli; Together with Selections from his Works" (Putnam), edited with introductions and notes by Samuel Macauley Jackson, Vol. I, 1510-1522—contains translations of part of the material in the first volume of this Swiss edition. The editor includes two of the treatises in the edition of 1901, revised, however, in accordance with the new text. To these are added the Life of the reformer by his friend Myconius, written in 1532. The translation of the Latin writings is by Mr. Henry Preble, that of the German works by Dr. Walter Lichtenstein and Prof. L. A. McLouth. Their work is excellently done, with due regard alike to fidelity to the original and to correct and idiomatic English. The editor's contribution shows that meticulous care in details which we have learned to expect from Dr. Jackson. It is matter for congratulation that we are now to have in English a worthy presentation of the writings of a man whose appeal to the modern spirit is as direct as Luther's and is often much more in the temper of our approach to the problems not only of practical religion but of national honor.

Miss J. L. Weston has already proved her skill in translation, metrical as well as prose, so that her "Romance, Vision, and Satire: English Alliterative Poems of the

Fourteenth Century, newly rendered in the Original Metres" (Houghton, Mifflin), will find a ready welcome among students of our older literature. The work, which was undertaken at the suggestion of Prof. W. H. Schofield, contains complete translations of "Sir Gawain and the Green Knight," "The Adventures of Arthur at the Tarn Wadeling," and "Pearl"—also renderings of parts of the alliterative "Morte Arthure," "Cleanness," "Patience," and "Piers Plowman" (down to the end of Passus VIII for the A-text, with merely the Prologue from the B-text). The term "Original Metres" is accurate only for the poems in stanzas. The last four poems in the list just given are all written in the old alliterative line, but Miss Weston has translated "Piers Plowman" in Morris's "Sigurd" metre, and the rest in decasyllabic couplets. The rhythmical effect in both instances is of course quite different from that of alliterative verse, though these are perhaps the best modern measures available for the purpose. From the nature of the case, however, the result is not so satisfactory as in the translations of the poems where the old stanza-forms have been preserved. On the other hand, the "Pearl" presents difficulties that are not exclusively metrical, and Miss Weston has herself confessed the inadequacy of her powers for the rendering of the subtle mysticism of this elegy. On the whole, the translation of "Sir Gawain and the Green Knight" is the most favorable specimen of her talents. The book should prove very useful as parallel reading in courses which aim at giving a general survey of English literature. The brief notes at the end of the volume call for little comment. Much more effective, however, than M. Jusserand's articles as a refutation of Professor Manly's theory of the multiple authorship of "Piers Plowman" is the contribution of Miss Weston's own countryman, R. W. Chambers, in the *Modern Language Review* for January, 1910. We believe also that she underrates the dependence of the alliterative "Morte Arthure" on its sources.

The cruel sufferings and religious fortitude of Louis XVI's sister, Madame Elisabeth, are vividly and interestingly told in "The Ruin of a Princess" (The Lamb Publishing Co.)—a reissue in complete but less expensive form of a work originally published a dozen years ago. It is not a biography of the romantic, extravagant sort, such as was written by De Beauchesne in 1869; it is composed simply of excellent translations by Katherine Prescott Wormeley of Madame Elisabeth's own letters and of the narratives of the prison life of the royal family which were written by Louis XVI's daughter, Madame Royale (later Duchess of Angoulême), and by his valet, Cléry. These contemporary records by eye-witnesses give lively pictures of revolutionary horrors, and the cruel indignities heaped upon Madame Elisabeth from the fatal Tenth of August, 1792, when she chose to share the imprisonment of her brother, until she herself was hurried to the guillotine in May, 1794. There is added a translation of Sainte-Beuve's appreciation of her, and a good sketch of the facts of the Princess's early life.

Mrs. Hamilton King's "Letters and Recollections of Mazzini" (Longmans) is a beautiful tribute from one of the younger British devotees of that great idealist. In girlhood she worshipped him from afar—him and Garibaldi, and other heroes and martyrs of the Italian struggle for independence. She even wished to enlist as a nurse in the Garibaldi campaigns. For several years before her first meeting with Mazzini she corresponded with him, and after their meeting, until his final departure from England seven years later, she was admitted into the inner circle of his intimates. His letters as published here show that tender side of him which we have had revealed often before. His courtesy, his simplicity, his kindliness, and the unfailing spirituality of his words and presence glow again in Mrs. King's description of them. Here and there, we find reference to events of the day, or to conspiracies about to be touched off. There are letters from Madame Venturi describing his imprisonment at Gaeta; and there is a memorable account of his death, in which he is represented as saying, "Yes! Yes! I believe in God!"—"and with these words, fell back and expired."

Mrs. King's pen portrait of Mazzini is the best that any English contemporary has drawn. After he died she poured forth her veneration in a volume of poems, "The Disciples," which enjoyed a wide reading, and led Cardinal Manning to seek her out. Without difficulty, she says, she, who had been an absolutely loyal Mazzinian, became a Roman Catholic. Now, in her old age, she puts forth this hymn of praise to the adored Master of her youth who was, in her opinion, "much less heterodox than many Catholic Modernists." It would be easy to show that Mazzini was in no sense a Catholic—he rejected, for instance, the Trinity—but the really important fact to be noted here is that she, and many like her, rising above creed and sect, regarded him as the incarnation of the holiest qualities vouchsafed to man. She admits with perfect candor that, if he had been a practicing Catholic, "he would have been fettered, and could not have preached so freely the universal brotherhood of Humanity." And she calls him "the last of the saints." Her book is thus a beautiful record, not only of Mazzini, but of the loyalty he inspired. It is, as she says of some of her early letters to him, "the testimony of a host of devoted lives."

Gen. Gates Phillips Thruston, who died in Nashville, Tenn., on Saturday, at the age of seventy-seven, served with distinction in the Civil War. In 1890 he published "Antiquities of Tennessee and Adjacent States."

Dr. Alice Bunker Stockham, who devoted much of her life to the cause of women's rights, is dead at her home near Los Angeles, Cal., aged seventy-nine. For some years she practiced medicine in Chicago and thereabouts, and later established a publishing house to issue her own and other "advanced" works. Her writings include: "Tokology, a Book of Maternity," "Koradine," "Karazza," "Tolstoi, a Man of Peace," and "The Lover's World, a Wheel of Life."

American scholars will learn with regret of the death of Edward Arber, who was killed in London by a taxicab, about a fortnight ago. Professor Arber's reprints of early English literature and documents bearing on it have come to be a necessary part of many a student's equipment. Born in 1836, Arber as a youth attended evening classes at King's College, London. From 1854 to 1878 he was a clerk in the Admiralty, resigning in the latter year to accept a lectureship in English at University College, London. Five years later he was appointed professor of English at Mason College, Birmingham, a position which he held until 1894. The first of Arber's reprints of Elizabethan and Stuart documents was issued in 1868. He next turned his attention to works of larger size, such as "The Marprelate Tracts," which were brought out in the English Scholars' Library. He also published at this time his "English Garner," a miscellany of tracts of the sixteenth to the eighteenth century. Finally, his transcript of the Registers of the Stationers' Company, on which he was engaged off and on from 1875 to 1894, has been a great boon to students especially of early drama. Oxford put its approval on his work in 1905 by granting him the degree of D.Litt.

Science

Sub-alpine Plants, or the Flowers of the Swiss Woods and Meadows. By H. S. Thompson. Thirty-three colored plates (168 figures). New York: E. P. Dutton & Co. $3 net.

Having successfully written of Alpine Plants in an earlier work, the author in this new volume now essays to describe the plants of slightly lower elevations. He has divided his work into a shorter first part (36 pages) and a longer part (264 pages), the latter taken up with a description of the different species growing from 3,000 to 5,000 feet altitude. As a definition of *sub-alpine* these altitudinal restrictions leave much to be desired, and the author makes apology for taking this as his standard, rather than the less arbitrary limit of tree vegetation, especially the beech and coniferous trees. He seems to know nothing of the fundamental work of Cleveland Abbe on the relation of the length of the growing season to vegetation—a causative factor splendidly illustrated in most mountain ranges, where the progressively diminishing length of the growing season, as one reaches higher altitudes, is reflected in the increasing alpine character of the plants.

The section of the work devoted to fruits and berries describes carefully the autumnal characteristics of many of the most interesting sub-alpine plants. As a guide to the amateur botanist it should serve excellently to point out some unfamiliar autumnal disguises of spring favorites. The two chapters on alpine gardens and the cultivation of alpine plants are instructive for England and the Continent, but American readers must be on their guard as to the author's cultural remarks. Our hot, dry summers preclude the cultivation of many plants mentioned by him, except

BURLINGAME PUBLIC

in the higher elevations some distance from the coast. Complete directions for collecting and preserving plants fill one chapter, which will be found useful to the traveller.

The body of the work is taken up with the more interesting plants growing within the restrictions mentioned above. The descriptions for the most part are accurately drawn and contain as little as possible of technical language. The author includes careful notes on the situation in which each species is likely to be found, its general distribution on the Continent and in England, and the month of flowering.

The usefulness of the book to the amateur botanist is not impaired by the fact that the sequence of plant families used is one that has had no scientific sanction for twenty years, but it would have been desirable to adopt the newer method. While the book is obviously not for professional botanists, the author's amateur constituency has the right to expect correctness of statement. That ecology is merely a study of plant associations (pp. 3 and 28), that the bog myrtle, a common American plant, is exclusively "Arctic and Western European" (p. 4), and that an ovary is a "carpel enclosing one or more ovules"! (p. 41), are unfortunate examples of inaccuracy. However, the general excellence of the work as a handbook of the sub-alpine region of Switzerland, together with the beautifully colored plates, which help materially in determining the most critical species, more than atones for minor shortcomings.

Sir George Howard Darwin, second son of the famous Charles Darwin, and since 1883 Plumian professor of astronomy and experimental philosophy at Cambridge, England, died in London on Saturday. He was born in 1845. Jointly with his brother he wrote on "Small Deflections of the Plumb Line Due to Movement of the Earth." He wrote many papers for scientific journals, besides "The Tides and Kindred Phenomena in the Solar System," which appeared in 1901.

Drama

John Galsworthy's latest contribution to the stage, "The Eldest Son" (Scribner), which has just been produced in London, by a singular coincidence is closely akin in subject to the "Hindle Wakes" of Stanley Houghton, presented in this city on Monday evening, after a successful run in the British metropolis. Both plays deal with the "unwritten law," which prescribes marriage as the one reparation for seduction, and in both the female sufferer, though from different motives, refuses the proffered atonement. Mr. Galsworthy's work, as might be expected, is strong in characterization and powerful simplicity of literary expression, while it is a model of compact and skilful construction; but it is far more ingenious as a bit of special pleading than it is helpful in its conclusions. He suggests no solution of the direfully familiar problems which he proposes and illustrates. Bill Cheshire, the eldest son of a rich baronet, of ancient lineage, has misled Freda, the pretty daughter of his father's gamekeeper. An under-keeper on the estate has got a village girl into trouble, and the Baronet, lord of all he surveys, and a great stickler for the proprieties among the lower orders, decrees that he must marry the girl or leave his place without a character. Bill, who is no profligate, learning that Freda is about to become a mother, pledges himself to marry her, and resolutely stands by his promise in the face of his mother's heartbroken protestations and his father's threat of disinheritance. The under-keeper, by agreeing to wed his inamorata, adds to the discomfiture of the baronet, who tries to justify his inconsistency by arguing that the cases are dissimilar, as, so far as their consequences are concerned, they undoubtedly are. Bill, however, is immovable, and the dramatic crisis is acute, when Freda, perceiving that her betrothed is actuated by a sense of honor only, not inspired by personal devotion, peremptorily refuses him, being supported by her sturdy father, who declares that he will have no "charity marriage" in his family. This clearly is a most lame and impotent ending, wholly unworthy of the apparent sincerity and indisputable freshness and vigor with which a commonplace story has been brought to a poignant climax. The whole play bears more evidence of radical bias than of sound or practical social philosophy, but is notable for the veracity of its types —there is not a personage in it who is not a living, breathing figure—and the fine quality of the dialogue, which is natural without being trivial or vulgar. As drama it is incomplete. It needs a sequel and Mr. Galsworthy ought to write one. Possibly he means to do so. He has already laid the foundations.

The "Hindle Wakes" of Stanley Houghton, presented in Maxine Elliott's Theatre, is a much more juvenile and less skilful production, loosely made and loosely written, but is, nevertheless, a notable work, especially for a beginner. In respect of its logical dramatic conclusion, it has the advantage over "The Eldest Son," but in general workmanship it is far inferior, except in the opening scenes. Interest, excited in the beginning, is largely exhausted before it is partly revived by the final solution. Fanny Hawthorne, a wilful but hitherto respectable mill-hand, goes off on a week's end frolic with Alan Jeffcote, the son of her employer. When her parents discover the truth they appeal to old Jeffcote—strict in business as well as religion—who promptly ordains that Alan shall marry Fanny, on pain of disinheritance, and break his long-standing engagement with his betrothed Beatrice. The latter concurs in this verdict, while vowing that she loves Alan dearly. Wherefore Alan, threatened with loss of money as well as of a wife, submits, after long resistance, and agrees to take Fanny as his bride. But Fanny positively refuses to have anything more to do with him. She will not marry a man, she says, who has thrown over another woman at his father's command. Such a match could only end in mutual distrust and misery. Moreover, she does not love him, is not ashamed, prefers liberty, and is perfectly able to take care of herself. Here, at all events, is a definite and dramatic conclusion, with assigned reasons. But it is absurd to suppose that plays of this kind can have any general application, or even suggest a solution of the problem involved. Such independence as Fanny's, if generally adopted as a precedent, would lead to the most disastrous consequences. But "Hindle Wakes" deserves credit for sincerity of purpose, truthful characterization, and natural humor and pathos. The representation of it here is not so effective as it might be.

The London critics vie with each other in glowing appreciation of Granville Barker's production of "Twelfth Night" at the Savoy Theatre. One of them writes:

> As a picture it was even more charming than "The Winter's Tale," for all mere eccentricity had been discarded. As a delivery of the poet's text it was incomparably better.

The plot of "Les Flambeaux," by Henri Bataille, just produced at the Porte Saint Martin, deals with the career of a scientist and his wife, who, collaborating, are on the point of making an important discovery. Yet, despite his wife's help, he deceives her and, in a different way, another assistant of his labors. In the end he attempts to straighten out the muddle by introducing the thought of high ideals, which, like the spirit of science, should lift men above pettiness and banalities. These ideals are the "flambeaux," corresponding to the uplifting influence of the stars in the firmament.

Mrs. Joseph R. Grismer, better known on the stage as Phoebe Davies, died last week in Larchmont, N. Y. She retired from the stage two years ago, after playing for many years in "Way Down East," under her husband's management. She was born in Wales, in 1864, and came to America with her father, Capt. Daniel Davies. In her own line of character, she was a competent performer, and throughout her career she enjoyed a considerable measure of popularity.

The death in London of Joseph Arnold Cave, the veteran actor-manager, removes one of the last links with the days of the old concert-rooms and cellars that preceded the modern music-hall. Mr. Cave reached the age of eighty-nine on October 1, and his stage career dated back to eighty years ago, for he was only nine when he went on the stage, to appear as Tom Thumb in a burlesque at what was then the Pavilion in the Edgeware Road, London, but has since been the Marylebone Theatre and the West London Theatre. He became champion clog-dancer of England at the age of sixteen. Later he sang at some tea gardens which occupied the site of St. Mary's Church, Cambridge Terrace, Bayswater, and appeared in operatic revivals at the Apollo, in Marylebone, when the conductor was Love, afterwards conductor to Charles Kean, at the Princess' Theatre. At the Bower, in Lambeth, managed by Henrietta Hodson's grandfather, he was associated with Charles Calvert, James Fernandez, and other well-known players, and was a great favorite at the famous Cider Cellars in Maiden Lane. In 1858 he undertook the management of the Marylebone Theatre; Sadler's Wells was also at one time under his control, and at the Victoria (originally the Coburg), in the Waterloo Road, his company included Robert Soutar, Sam Emery, Marie Litton, and Nellie Farren. In 1905 Mr. Cave, through the influence of King Edward, was nominated a Brother of the Charterhouse.

Music

Selected Piano Composition: Franz Schubert. Edited by August Spanuth. Boston: Oliver Ditson Co. $1.50.

Forty Songs: Peter Iljitch Tchaikovsky. Edited by James Huneker. Boston: Oliver Ditson Co. $1.50.

German, French, and Italian Song Classics. Edited by Horatio Parker. New York: John Church Co. $1.50.

Creature Songs. By Louise Ayre Garnett. Boston: Oliver Ditson Co. $1.25 net.

"Back to Mozart!" is a cry often heard now from music-lovers who are tired of the complexities of contemporary music and long for a revival of the simple melodious style of the olden times. "Back to Schubert!" would be a better motto still, for as an original melodist Schubert is at least the equal of Mozart, and in other respects—in his harmonies, modulations, and color effects—he is far superior. In these things the composers of our day can learn much more from Schubert than from Mozart. Rubinstein placed Schubert above Mozart, and the time will come when this verdict will be generally accepted. It is only in the opera that Mozart excels—far excels—Schubert. His best symphonies and chamber works, on the other hand, are less inspired than Schubert's, and as for the songs and piano pieces, Mozart cannot be regarded as the equal of the composer of the "Doppelgänger," the "Erlking," the Musical Moments, and the Impromptus That Schubert stands above all other song writers is now universally conceded; but far too few know how fascinating are his piano pieces. Rubinstein regarded them as even more marvellous in their originality than the songs. Liszt, before him, had commented on the rare treasures to be found among them. Paderewski adores and often plays them. Dvorák always had a collection of them lying on his piano for the education and delectation of his children.

It was inevitable that a selection of these piano pieces should be incorporated in the admirable Musicians' Library published by the Oliver Ditson Company. The editor deplores the fact that many lovely pieces by Schubert are to this day virtually unknown outside of professional circles, and he blames the concert pianists for not doing their duty. They give their audiences too much of Debussy, Ravel, Scriabine, and others of the day—writers whose eccentricities soon exhaust the interest of the hearers. No better contrast could be provided than the naïveté and spontaneity of Schubert. Mr. Spanuth's collection brings conveniently together eight Impromptus, six Musical Moments, some waltzes, a galop, an allegretto, the fantaisie in G minor, the andante from the B flat major sonata, and some other things. Only one of the sonatas is given complete, that in A minor, opus 42, which is most characteristic of the composer. We should have liked to see also at least the scherzo of the posthumous sonata in B flat major, the trio of which Dvorák particularly admired. Undeniably, all these sonatas are too long. Schubert never knew when to stop except when he set out specially to write a short piece, such as an Impromptu or a Musical Moment. In commenting on these short pieces, Mr. Spanuth hardly does justice to their originality of form, which is as great as that of the songs. Nor does he call attention to the great influence these groups of pieces had on the development of piano music. The G major Impromptu, for instance, is the root of Mendelssohn's "Songs without Words," and no one can play these pieces, and particularly also the presto of C major Fantaisie, without a startling realization of how deep an influence they exerted on Chopin. Riemann maintains that Liszt, also, had his harmonious roots in Schubert. In going back to Schubert we should therefore have nothing to lose and much to gain. Mr. Spanuth's volume is timely, and must be commended, with its excellent introductory remarks, to pianists, professional as well as amateur. It will help along the renaissance of melody.

Mr. Huneker thinks that, except Schumann, no composer tells us so much of himself as Tchaikovsky. "Every piece of his is signed, and he does not hesitate to make the most astonishing confessions." "The tragedy of a life is penned behind the bars of his music." He wrote "with tears in his soul" "Nur wer die Sehnsucht Kennt" and other moving songs. To have forty of the best of these songs—there are a hundred altogether—in one volume is an advantage which will be widely appreciated, all the more as the editor's introduction is helpful, the choice judicious, and the English translations made with the same care that has been bestowed on the other volumes of the Musicians' Library. Not all of Tchaikovsky's songs are first-rate, by any means; some of them he dashed off for ready cash, and others were composed at moments when his melodic ideas were not so distinguished as usual. But concerning Goethe's "None but the Lonely Heart," Mr. Huneker is probably right in saying that not Schubert himself gave musical utterance to its woe as did the Russian. Nor does he say too much in praise of "Don Juan's Serenade," "Mignon's Song," and "Disappointment." It is to be hoped that these and others of the songs in the present collection will henceforth be included more frequently in American concert programmes to vary the monotony of the ever-present Brahms, Debussy, Wolf, and Strauss, for most of which the public does not care because they are not melodious.

German songs are, as a matter of course, most numerous in Professor Parker's collection of fifty "Song Classics." The *Lied* is so thoroughly a German creation that even the French have adopted the word. As for the Italians, they have always been too much interested in opera to cultivate the parlor song with piano. To include them worthily in his volume Professor Parker had to fall back on Caccini, Pergolesi, Scarlatti, and Lotti. The French give a better account of themselves. Although they also are chiefly interested in opera, they have composed a considerable number of songs that are worth while. Bizet, Faure, Gounod, Massenet, and Saint-Saëns are creditably represented here; but as a matter of course, Schubert, Schumann, Franz, Brahms, and Wolf, with other Germans, make up the bulk of the book. The absence of Richard Strauss is doubtless due to copyright difficulties. Among the three songs of Grieg one is glad to see the wonderful "Vom Monte Pincio," which, for some unknown reason—perhaps because it is too difficult—is never sung in public. All the songs are printed with the original words as well as English versions.

Louise Ayre Garnett's book of songs, for which she wrote both words and music, is not a classic, but simply a holiday book for young folk, with a funny picture of animals or other things at the head of each song.

The vocal score of "The Firefly," which won such a decided success last week at the Lyric Theatre, has been published by G. Schirmer. The composer of the operetta is an Hungarian, Rudolf Frimi.

Julia Culp, who is to arrive here about the beginning of the New York season, seems to be unanimously regarded by European critics as one of the greatest singers of the time.

Ossip Gabrilowitsch began in Berlin on November 23 a series of recitals which will illustrate the development of the piano concerto from Bach through Mozart and Beethoven to the present day.

Eugen d'Albert, after several incursions into the realm of comic opera, which were not attended with happy results, has gone back to that field of music-drama in which he has thus far most forcibly appealed to the public taste. He has written a companion work to "Tiefland," which, under the title "Liebesketten" (Love's Fetters), was produced recently at the Vienna Volksoper (People's Opera). The subject, like that of "Tiefland," is taken from one of those lurid plays fashioned for the Spanish artist Guerero, the scene of action being laid in Brittany.

Prof. Otis Bardwell Boise, head of the department of composition at the Peabody Conservatory of Music, Baltimore, died in that city last week, at the age of sixty-eight. "Harmony Made Practical" and "Music and Its Masters" are among his published works.

Art

Mrs. M. S. Watts is about to publish the biography of her husband, George Frederic Watts, the painter. Doran will bring it out in this country.

It is proposed to create a memorial to Prof. George N. Olcott, who, until his death, was keenly interested in the development at Columbia University of a small but well-selected collection of antiquities to aid the work of the department in Roman archæology. At the time of his death there were temporarily included in the collection a number of objects, for the purchase of which no funds had as yet become available. If a sufficient amount shall be contributed, these objects will be acquired as a fitting memorial to Dr. Olcott's unwearied devotion. Subscriptions may be sent to Miss Helen H. Tanzer, the Normal College, Sixty-eighth Street and Park Avenue, New York city.

The Pennsylvania Academy of the Fine Arts announces its one hundred and eighth annual exhibition, which will open to the public on Sunday, February 9, and close on Sunday, March 30. The jury of artists is composed of the following members: Painting—W. Sergeant Kendall, chairman; Emil Carlsen, William J. Edmondson, Johanna K. W. Hailman, Robert Henri, Elizabeth Sparhawk Jones, Gari Melchers, William M. Paxton, Joseph T. Pearson, jr., Henry R. Rittenberg, and Charles Morris Young. Sculpture—Herbert Adams, Karl Bitter, and Charles Grafly. The following are on the hanging committee: W. Sergeant Kendall, Joseph T. Pearson, jr., and Charles Grafly. Clement B. Newbold is chairman of the committee on exhibition.

The catalogue of contemporary German graphic art, upon which Mr. Martin Birmingham, of the Berlin Photographic Company, has long been at work, is at length complete. It mentions etchings, lithographs, woodcuts, and original drawings to the number of 350, by eighty-three artists. The exhibition will be shown for a month in New York, and later in other cities.

We have received from V. G. Fischer an illustrated catalogue of old masters exhibited in his gallery opposite the Public Library. The pictures are some seventy. Of especial interest are a brilliant sketch by El Greco, and masterly portraits by Drouais and Goya. Among the Northern examples a grim masculine head by Cranach and Mabuse's jewel-like effigy of Eleanor of Austria are most notable. A Botticelli school piece, in which an exquisite landscape outlook seems to be by the master's hand, is of especial interest to minute connoisseurs. A romantic female portrait by Bacchiaca is familiar to visitors to this gallery. It may be noted that a very odd panel by Martin Schaffner, representing four kings working on a Romanesque church, undoubtedly represents the *Quatuor coronati*, the patron saints of the masons and sculptors. Who will may read their names on the panel itself or consult the "Golden Legend." Nothing in the collection is more charming than a fantastically alluring female portrait ascribed to a rather feeble Leonardesque painter, Giampedrino. Despite the high authority for the attribution, one would gladly see some more original master in so remarkable a work. Of the Dutch pictures the most remarkable are a small head of a laughing child by Frans Hals, and an admirable Musicale by Terburg.

F. Weitenkampf's writing on the graphic arts always has the qualities that befit a distinguished public official—sane conservatism in taste, accurate scholarship, and a kind of robust good sense. The latest book of the print curator of the Public Library, "American Graphic Art" (Holt), displays these familiar excellencies. The chronicle is divided topically under Etching, Line Engraving, Mezzotint and Stipple, Lithography, Woodcutting in black line and in white, Illustration, and Advertising. Mr. Weitenkampf has assembled under each head an extraordinary amount of information. Our only quarrel with him is that such encyclopædic fulness occasionally impairs the generally readable quality of his text. A better critical emphasis might have been obtained by omitting the obscurer draughtsmen. Possibly Keese's "The Poets of America, Illustrated by one of her Painters," 1841, might have been included as an early and rather creditable attempt at once to illustrate and decorate an imaginative text. Blake's decorations for Young's "Night Thoughts" seem to have been the model, and one of the designs is "Drawn by W. H. Croome." Mr. Weitenkampf's book contains about forty well-chosen illustrations.

The many beautiful illustrations from Salem and other Massachusetts North Shore towns would alone justify the publication of "Colonial Homes and Their Furnishings" (Little, Brown), by Mary H. Northend. The author is known as an indefatigable collector of photographs of colonial architecture and its accessories. Her text impresses one as being written more or less round the pictures. It shows, nevertheless, evidences of determination to get the proper facts. The grouping of data is sometimes faulty, as in the chapter on old China, which, without reference to the distinction between porcelain and pottery, includes salt-glazed and Delft wares. The manner of philosophizing is exemplified by the following:

> Colonial is synonymous of the best, and objects created during its influence are always of a higher degree of perfection than the best of other periods. Looking about for a reason for this, we are confronted with the realization that the work of that time was carefully planned and carefully finished, craftsmen giving to their output the best their brains could devise, and allowing no reason, however urgent, to interfere with the completion of a certain object as they had originally planned it to be. Therein lies the real reason of the superiority of things colonial. Later-day artisans sacrificed quality to quantity.

G. F. Hill's "Portrait Medals of Italian Artists of the Renaissance" (Macmillan) is a thoroughgoing bit of special scholarship which seems to exhaust its field. It is as well an entirely readable book. Mr. Hill has collected and reproduced something like sixty medallic portraits beginning with Leon Battista Alberti and ending with Artemesia Gentileschi. The most famous portraits are those of the brothers Bellini, Pisanello, Michelangelo, Bramante, and Titian. The commentary presents all the information expected in a *catalogue raisonné*, and as well suggestive critical notes. The medals are clearly reproduced to scale, and the book is generally well made.

Books almost innumerable on house-building are being issued by publishers on both sides of the ocean. There is more or less trash, but also not a little good wheat in all this grist, and the average quality of the books of this class put forth by reputable houses has greatly improved of late years. The artistic possibilities of the country house of moderate size and cost are better understood among us than formerly, and there is an increasing demand for non-technical manuals and treatises by men of experience and sound taste. Such a book is Allen W. Jackson's "The Half-Timber House: its Origin, Design, Modern Plan and Construction, Illustrated with Photographs of old Examples and American Adaptations of the Style" (McBride, Nast). The style is familiar and not always dignified, but the general attitude and the critical estimates of the author are sound and discriminating. As a clever special plea for the general adoption in America of the English type of half-timber design and construction it is well done, and almost disposes of the many serious difficulties and objections which stand in the way of the naturalizing of this type of house architecture. The experienced builder and the architect will no doubt make the proper allowances for the enthusiasm of the advocate, but it might be well to warn the layman that of all the styles of house design and construction the English half-timber style is the most delicate and difficult to handle with success, both on the artistic and practical sides. That it is capable of the most charming results is, however, true, as the admirable illustrations of both English and American examples in this volume abundantly prove.

Jonathan Scott Hartley, sculptor, who was president of the Art Students' League from 1878 to 1880, and of the National Academy in 1891, died on Friday of last week in New York, at the age of sixty-seven. A marble-cutter when little more than a boy, he went to England to begin serious work at the Royal Academy, when he was but twenty-two. Later he studied in Germany, Paris, and Rome. His wife was a daughter of George Inness. Hartley's name is associated with ideal subjects in clay, one of which, entitled "The Whirlwind," was very favorably received in 1878. He did many busts of actors and actresses, including Edwin Booth, Lawrence Barrett, John Gilbert, and Ada Rehan. He was the sculptor of the Daguerre monument in Washington, the Ericsson monument in this city, the statue of Miles Morgan in Springfield, Mass., and statues of Alfred the

Great for the Appellate Court building, this city, and Thomas K. Beecher in Elmira. His latest work was a group of a boy and rabbits, the "Cradle of Pan," which will be exhibited at the coming exhibition of the Academy of Design.

Finance

THE BREAK IN THE STOCK MARKET.

A decline in prices, running within a week to losses of 5 to 10 points in the most active shares on the Stock Exchange, always attracts attention—not only from Wall Street itself, but from the outside business community. This present reaction is certainly not the less noteworthy in that it follows a three-month period marked by every indication of reviving American prosperity, and that it was not preceded by an attempt to "discount" such prosperity by excited speculation for the rise on the Stock Exchange. In the comment of experienced financial observers, two main explanations are offered of the violent decline in stocks.

Either cause, or both causes together, may be accepted with sufficient plausibility to account for the "December break." One of them is the Supreme Court's decision of last week, ordering dissolution of the Union Pacific-Southern Pacific merger, and accompanied by such more or less unsettling incidents as the award of the railway wage arbitration board, the so-called "Money Trust" investigation, and the impending revision of the tariff. The other is the state of the money market.

The grounds for assuming the first-named set of influences as a cause for the break in prices are obvious enough. All of them create uncertainties and contain possibilities of deranging financial plans. All of them impress a good part of the financial community as phases of the day's "political unrest." It is therefore natural that, in Wall Street particularly, there should exist a tendency to assign to them the whole responsibility for the decline in stocks.

The money market situation, however, also stands by itself, and invites the inquiry as to whether, even without those other influences making for uncertainty, it would not have brought about a state of things somewhat resembling what has actually occurred on the Stock Exchange. The case is plain enough. The American market entered the autumn season with evidence that, in the sudden and nation-wide business revival, demands on the money market for legitimate trade purposes, and especially for the moving of the unprecedentedly large harvests, would be heavier than on any previous occasion in our history. Ordinarily, such a situation, with our export of agricultural produce at high-water mark, would be met through extensive import of gold from Europe, whereby New York banks might restore their cash reserves, depleted through shipments of currency to the West. But the Balkan war, the panicky state of Europe's markets, and the advance of discount rates at all the great foreign banks, abruptly checked the gold import movement which had just begun.

The New York bank position was thereafter chiefly sustained by the lending of money in Wall Street by interior banks, through which the New York institutions were enabled to cancel their own Wall Street loans and conserve their resources for the business borrower. But it turned out, a fortnight ago, that these inland banks, in their eagerness to take advantage of the higher Wall Street money rates, were increasing their own loan account too much, and had thereby impaired their own reserves at the very moment when demands of interior business borrowers were rising to a maximum. Sudden recall of their Wall Street loans ensued; the 20 per cent. call money market, and the deficit in reserves in the New York bank statement of November 30.

An effort to resume import of gold from London was at first successful, and, indeed, it was wholly justified by the rate of foreign exchange; but thereupon Lombard Street quietly warned New York that further withdrawals of the sort would result in the rise of the London bank rate to the abnormal figure of 6 per cent. There was therefore left—especially in view of the fact that home demands on the money market were sure to increase with the huge "year-end requirements" of finance and trade—only one recourse for relief. The line of least resistance, under such circumstances, is through Stock Exchange liquidation.

So that the break on the market might be assigned to the money market alone, as well as to the "merger decision" alone. The one sure fact in the situation is that the process of liquidation which is now being pursued is of itself relieving the strained and abnormal position on the money market. As for the real bearing of the Southern Pacific incident on financial values, we shall have to wait awhile to be sure of that. Judgment may at least partially be suspended until the practical possibilities of the Harriman disentanglement emerge from the present confusion. It should meantime be borne in mind, however, as wise people kept in mind during the Northern Securities and Tobacco dissolutions, and at the time when the Steel prosecution was begun, that the essential purpose of the action, even if successful, is nothing but restoration of the *status quo*, with such additional intrinsic value as may have been conferred on the properties, not by mergers and high finance, but by a series of years of great American prosperity.

It is high time that the stuff which was talked in the recent political campaign (and by at least one candidate for office) about the horrors of "driving American industry back to the methods of fifty years ago," should be treated according to its deserts. The hallmark on virtually every one of those dissolved combinations bore date either 1899 or 1901—the two years when speculative promotion shoved sober industrial achievement impatiently aside. Harriman, in his Southern Pacific combination, came nearest of any one to retaining the genuine constructive and progressive instincts, along with the speculative spirit of combination. But Harriman was a genius, and even so, his own history, after the Southern Pacific conquest, is eloquent witness to the longer results of the methods thus applied. The wild battle for Northern Pacific, with funds raised by Union Pacific in the open market, came immediately afterward. The attempt to buy up half a dozen other railways, in the same recklessly speculative way and on the basis of floating debt, was a later sequel. Both incidents were the inevitable outcome of the mischievous tendencies which it has been the office of our Supreme Court to arrest.

The book has certainly great value for students of modern religion."
—Boston Transcript.

THE
Promise of the Christ-Age in Recent Literature
By William Eugene Mosher, Ph.D.
12*mo.* $1.25 *net; by mail,* $1.40.

An analysis and interpretation from the viewpoint of religious significance of ten recent works by authors of international standing. The representative character of such dramatists and novelists as Lagerlof, Hauptmann, Rostand, Kennedy, etc., together with the widespread popularity of the works treated, justifies the author in attributing to them symptomatic significance. In spite of widely divergent themes and methods of treatment, each writer either aims to present Christ in His own person or finds the virtue power for his chief character in the direct influence of Christ's personality and teaching.

WELLESLEY

NEW BOOKS OF TRAVEL, Etc.

The Cottages and Village Life of Rural England

BY P. H. DITCHFIELD, M.A.

With 52 Colored Plates and many line drawings

BY A. R. QUINTON

Mr. Ditchfield's book is the expression of the feeling that the peculiar beauty of the old cottages and the village life of rural England is slowly, but surely, vanishing. The new aspects evoked by the Spirit of Modern Progress may have a charm of their own, but it is well that some one should preserve, as author and artist have done here, the old-time flavor. One may see the children at their games, the gossips on the bridge, the lace-makers throwing their bobbins; or may enter the low door of the village-shop, and hear quaint histories of the generations gone. Altogether they have given us a book of unusual beauty. The treatment of Mr. Quinton's color-plates, giving the effect of dark frames on a tinted paper, is excellent. *Demy quarto, net,* $6.00

Karakoram and Western Himalaya
An account of the Expedition of the
Duke of the Abruzzi
to the highest altitudes yet reached by man. Related by Fillipo de Fillipi and superbly illustrated by Vittorio Sella. *In two vols., net* $15.00.

"After his splendid book describing Ruwenzori it seemed that nothing so fine in the history of exploration could be produced again, but this is even more fascinating."—*The Sun*, New York.

The Conquest of New Granada
By Sir Clements R. Markham, K.C.B., F.R.S.
The first history of the lost civilization of the Chibchas, by the well-known author of "The Incas of Peru," etc. With a map.
Small demy 8vo, $2.00 *net; postpaid,* $2.10.

The Surgeon's Log **By J. J. Abraham**
The day-by-day story of a young ship's doctor making his first voyage from gray Glasgow to the Far East; one of the most fascinating books of leisurely sea travel ever written.
Cloth, 8vo, $2.50 *net; postpaid,* $2.65.

Aspects of Algeria **By Roy Devereux**
A valuable account of the French attempt to colonize this picturesque Moslem land.
Illustrated, $3.50 *net; postpaid,* $3.67.

The Land That Is Desolate
By Sir Frederick Treves
Probably the most valuable account of modern Palestine yet written. The great surgeon's power of keen diagnosis is not blinded by his deep reverence for sacred associations, and the result is at once truthful and sympathetic. Illustrated from photographs by the author.
$3.00 *net; postpaid,* $3.20.

Dawn in Darkest Africa
By the Rev. John H. Harris
Introduction by Lord Cromer
The force of the book will be felt wherever men deal with a native population as a valuable asset of a country, instead of a burden. Lord Cromer's Preface and Mr. Harris's text should be read by every one interested in missions or in colonies. The illustrations of native customs, etc., from photographs by Mrs. Harris, are exceptionally vivid. $3.50 *net; postpaid,* $3.70.

Rambles in the Pyrenees
By F. Hamilton Jackson
Describes the romantic associations of the districts on the French slopes of the Pyrenees, Gascony, etc. 100 illustrations, chiefly by the author. *Cloth, 8vo,* $6.00 *net; postpaid,* $6.22.

JUST PUBLISHED

OUTLINES OF EUROPEAN HISTORY: Part II

By **James Harvey Robinson** and **Charles A. Beard,** Columbia University.

This new volume for high-school use is a characteristic and valuable addition to the Robinson and Beard Histories. It is an abridgment of the author's two-volume "Development of Modern Europe," and covers the period from the opening of the eighteenth century to the latest events previous to publication. The text is marked by the same fine judgment of historical values that distinguishes the other Robinson and Beard Histories.

PART I. (In preparation.)
PART II. *Outlines of European History.* 12mo, cloth, 555 pages, illustrated. $1.60.

OUR SPECIALTIES: AMERICANA, PRINTED AND MANUSCRIPT
THE ARTHUR H. CLARK CO., CLEVELAND

LETTERS AND MEMORIALS
OF
Wendell Phillips Garrison
Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic, editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net, postpaid.

THE STORY OF A ROUND-HOUSE AND OTHER POEMS $1.30 *net.*

THE EVERLASTING MERCY AND THE WIDOW IN THE BYE STREET

"Incomparably the finest literature of the year." *Second Edition.* $1.25 *net.*

BELLES LETTRES

CARMEN SYLVA: SKETCHES FROM THE ORIENT

By PIERRE LOTI.

Author of "Disenchanted," etc.

"A book of which every page is a picture. Written with the delicate art and grace of the greatest literary impressionist of our times." $1.00 *net.*

By WILLIAM BUTLER YEATS.

THE CUTTING OF AN AGATE $1.50 *net.*

THE GREEN HELMET AND OTHER POEMS $1.25 *net.*

New books which again reveal the distinguished Irish author as a poet and essayist of exceptional charm.

TRAVEL

SOUTH AMERICA: Observations and Impressions

By the Rt. Hon. JAMES BRYCE.

"The most comprehensive, clearest, sanest, and illuminating volume on South America." $2.50 *net.*

PANAMA

By ALBERT EDWARDS.

The fascinating story of Panama from early times to the present day. Illustrated. $1.50 *net.*

ART

MORNINGS with MASTERS OF ART

By H. H. POWERS, Ph.D.

The development of Christian art from the time of Constantine to the death of Michael Angelo. Profusely illustrated. $2.00 *net.*

A WANDERER IN FLORENCE

By E. V. LUCAS.

Richly illustrated and written in the same happy vein as the companion volumes, Paris, London, Holland. $1.75 *net.*

SOCIAL BETTERMENT

SOCIALISM FROM THE CHRISTIAN STANDPOINT

By Father BERNARD VAUGHAN, S. J.

The broad facts of Socialism and their relation to Christianity. $1.50 *net.*

CHRISTIANIZING THE SOCIAL ORDER

By Dr. WALTER RAUSCHENBUSCH.

The new social awakening of moral and religious forces. $1.50 *net.*

HOME IMPROVEMENT

INCREASING HOME EFFICIENCY

By MARTHA BENSLEY BRUERE and ROBERT W. BRUERE.

The management of the home from the practical standpoint. $1.50 *net.*

SUCCESSFUL HOUSES AND HOW TO BUILD THEM

By CHARLES E. WHITE, Jr.

An authoritative work on house-building for the house-owner. Over 400 illustrations. $2.00 *net.*

PUBLIC QUESTIONS

THE GOVERNMENT OF AMERICAN CITIES

By WILLIAM BENNET MUNRO, Ph.D., LL.B.

Author of "The Government of European Cities," etc.

A practical description of city government in the United States. $2.25 *net.*

THE ESSENTIALS OF INTERNATIONAL PUBLIC LAW

By AMOS S. HERSHEY, Ph.D.

A notable work based on modern up-to-date authorities. $3.00 *net.*

LABOR PROBLEMS

THE BUSINESS OF BEING A WOMAN

By IDA M. TARBELL.

Author of "The Tariff in Our Times," etc.

A powerful analysis of the effects of business life on woman's character. $1.25 *net.*

ORGANIZED LABOR: Its Problems and How to Meet Them

By A. J. PORTENAR.

"An intelligent summary of the labor problems of the day." $1.00 *net.*

Published at 64-66 5th Ave., N.Y. **THE MACMILLAN COMPANY** On Sale at All Bookstores

The Nation

NEW YORK, THURSDAY, DECEMBER 19, 1912.

The Week

Events have swiftly belied the prediction made in these columns the other day that the Progressive party would be defined in the text-books of the future as a party with the Chicago habit. The national headquarters of the new party have now been removed to New York, and social justice can hereafter be promoted without excessive expenditures on railway fare. Chicago will remain, in all probability, the religious capital of the new movement, but the political seat will be located in immediate proximity to the Perkins war chest and the Munsey State Department, and at no great distance from the headquarters of the First Army Corps under General Flinn at Pittsburgh. All militant movements prefer to post themselves on the frontiers of the enemy's country. The proud distinction which New York State held for so many years in respect to Mr. Bryan it will now uphold as against the Colonel. Armageddon is thus definitely localized. The forces of evil may do their worst in the Supreme Courts of Idaho and points east; but their overthrow will be accomplished when New York's forty-five Presidential electors awaken to the light.

It is noted that Congress is getting far fewer petitions and memorials than usual. This is said by Washington experts to indicate that the people are "sick of politics." It may, however, merely prove that they are sick of petitions. Yet the persistence of that way of endeavoring to express public opinion and to influence legislation has been remarkable. In only the rarest instances could it be shown to have any direct effect, but it has been persevered in surprisingly. The *Congressional Record* has often been lumbered up with the mere enumeration of the petitions presented in House or Senate. The "right to petition" has thus been firmly upheld, even if it is futile in 99 cases out of 100. Doubtless, the flow of petitions to Congress will soon be resumed. But that again would not conclusively show that the people are tremendously interested in politics. Just at present, there is plainly a sort of lull or truce. One party is passing out of power and another is coming in. The country is waiting. Moreover, the generally prosperous state of industry and business has had the usual effect of diminishing active discontent and of busying people more about their private affairs than about saving the country. But no one need fear that the sway of politics will not in good time reassert itself.

Highly complicated issues were involved in the coal-road suits, decided by the Supreme Court on Monday, and it is somewhat difficult to understand the attitude of the judges towards all the matters argued before them. It has been hastily said, for example, that the decision makes waste paper of the "commodities clause" of the Hepburn law—the clause, that is, forbidding railways to transport coal from mines owned by themselves. But in reality the Court merely says that many of the acts complained of in the Government suit were committed before the passage of the Hepburn act. Its applicability to other like acts was dismissed without prejudice. That is to say, the Government is left free to bring other suits directly under the Hepburn law. Similar is the disposition of the matter of control of one coal road by a competitor, through stockholding devices. This, too, is left for the Department of Justice to deal with in the future as it sees fit. The Court held that on the general charge of an unlawful combination among the railways, the Government had not made out its case; but it had no hesitation in pronouncing illegal the contracts made by the roads with independent producers, and also found the defendant companies guilty of unlawfully combining, through the Temple Iron Company, to shut out competing lines and in other ways to restrain trade. We think that the more the decision is studied the more satisfactory it will be found. Plainly, the judges sought in this case, which was begun in the lower courts five years ago and which the Supreme Court has held under advisement for more than a year, to render a decision fully in line with that in the Standard Oil suit. They take pains now as then to show that the law does not strike at all trade agreements, however "normal," but only at those which are abnormal by being monopolistic and oppressive in their effect upon the public.

If one wishes to be strengthened in his conviction that the sooner the indirect election of United States Senators is done away with, the better, he has but to look at the Baltimore papers nowadays. The Governor has made an interim appointment for the vacancy caused by the death of Senator Rayner, but the Legislature of 1914 will have the filling of that vacancy to March 4, 1917, besides electing a Senator for the full term of six years from the expiration of Senator Smith's term, March 4, 1915. Consequently, the pot has been boiling with much fury, thirteen months prior to the assembling of the Legislature. There is, indeed, a system of Senatorial primaries in Maryland, but, quite apart from any criticism to which it may be open as a mode of determining a party's choice, it is impossible for mere primaries to attain the result which direct election by the people would procure. Voters at the general election will be compelled either to sacrifice their preference as to legislative candidates or their preference upon the Senatorships, whenever these two come into conflict. And it is plain that the professional politicians in Maryland are having just the kind of advantage in plying their trade that such a complication between unrelated things is calculated to give.

The immigration figures given in Secretary Nagel's report are decidedly interesting. The impression is widely current that the country receives, through immigration, an accession of about a million a year to its population. In point of fact, the net immigration into the United States—excess of aliens coming into the country over aliens going out of it—in the fiscal year ending June 30, 1909, was 544,000; in the year 1910 it was 818,000; in 1911 it was 512,000; and in the fiscal year which ended June 30, 1912, it was only 402,000. These figures have not the character that is often attributed to them. Of course, the immigration of the '50's bore a vastly higher ratio to the home population; but even the net immigration of the '80's, when the change from Northern and Western to Southern and Eastern Europe had already in a great measure taken effect, was probably much larger in proportion to the home population than that which we have been getting in the past few years.

Ohio's amendment of her Constitution encourages Tennessee to start the machinery for altering hers. The chief thing in question is the method of amending the instrument. At present, it is necessary for two-thirds of both houses of the Legislature to pass a proposed amendment at two successive sessions before it can be submitted to the people. The Tennessee Constitutional Convention League would enable 10 per cent. of the voters to obtain by petition the submission of any amendment. As in the case of Ohio, there will probably be a convention, not for the purpose of drawing up a new Constitution, but to submit a series of amendments which can be voted on separately. It is also proposed that delegates shall be chosen directly by the voters, the names of candidates to be placed on ballots by petition. All these arrangements, of course, must be endorsed by two successive Legislatures, so that at best a new Tennessee Constitution is hardly in sight.

The colored people of this country are to be heartily congratulated upon the great services rendered to them by the Honorable Cole Blease of South Carolina. As it was said of John Brown's execution that it made all men take sides on the question of slavery, whether for or against, so Gov. Blease's performances in Richmond have made every one in the South speak out for or against upholding the law. The other Southern Governors at Richmond were compelled by his very appearance to go on record against lynching with greater force and earnestness than ever before. If any one doubts how great is Gov. Blease's contribution to law and order, let him read the leading journals of the South, and particularly those of his own disgraced State. They make it plain that hereafter any one in the South or North who favors lynching, either directly or indirectly, degrades himself to the level of Cole Blease. No one can truthfully assert hereafter that Blease or his kind speaks for the sober sentiment or the chivalry of the South.

Readers of the article on "Rising Prices and the Public," by Prof. John Bauer, in the *Popular Science Monthly* for December, will find several things that are well worth thinking about; all the more because they relate not to the causes, but to the effects, of the lowered purchasing power of the dollar. If your income, as measured in dollars, has advanced along with prices to such an extent that you can make the two ends meet just as you used to do, and also put by for a rainy day just as much as you used to put by, don't flatter yourself that you are doing as well as of old. On the supposition, for example, that prices have risen 50 per cent. all round, and that in former times you regarded $1,000 a year as the proper amount to save, or $10,000 life insurance as requisite for the protection of your family, these figures should now be raised to $1,500 and $15,000, respectively. As for the actual facts in the different classes of the population, Professor Bauer recites broadly what is generally recognized; especially emphasizing the fact—forecast by economists *à priori*, verified unpleasantly by thousands *à posteriori*—that, while wages have lagged somewhat behind prices, salaries have been vastly more inert than wages; Professor Bauer says they have "remained almost unchanged." There is some comfort—which Professor Bauer cruelly abstains from giving—to the salaried man in the belief that, when salaries *do* get revised upward to conform to the high prices, they will stay up a long time after the prices go down, for their inertia works both ways; and a similar reflection should somewhat dull the edge of self-reproach on the subject of savings. But, as nobody knows when, if ever, prices *will* go down, it will not do, after all, to set too much store by these considerations.

The American Academy of Arts and Letters may fairly be said to have weathered the storm of ridicule which faced it at the outset. The disclaimer of any intention to rob posterity of one of its most precious privileges by arrogating immortality to Academicians may be accepted without any quibble. Nor does the name "Academy," which seems to be a challenge to some democratic spirits, signify anything more than the difficulty of hitting upon a suitable title. Nevertheless, if those belonging to the Academy are content to leave the question of their own literary immortality to the future, they are bold in affirming their loyalty to the immortals of the past. In the present-day welter of vague Futurism and specific vulgarism, they dare to be orthodox. There must be many old-fashioned persons still who will welcome the sounding of this note. To them it will require no argument to prove that "the recognition of permanence and vitality in the ideals of arts and letters" is a highly proper aim; they will accept as axiomatic the statement that a body of persons interested in literature should stand for the discouraging of "the trampling of our noble English language with the hoofs of buffaloes," of the confusing of advertisement with criticism, of the mistaking of hysteria for originality, of the admission that the only way to be American is to be provincial, and in general of the notion that taste is an outworn test of art.

The architectural profession in this country and abroad will rejoice in the recognition which has come to William Rutherford Mead in the bestowal upon him last Friday of the gold medal of the National Institute of Arts and Letters. Mr. Mead's native modesty long kept him in the background, so far as the public was concerned, which knew well his brilliant partners, Charles F. McKim and Stanford White. It was known to some, also, that Mr. Mead was the balance-wheel of the firm, who attended to the business side and the practical details, and, remembering this, they overlooked too often the fact that in Mr. Mead there is a rare artist, a designer of first rank. The present award will help to let the public understand what the profession so well knows. Under Mr. Mead's leadership the name of McKim, Mead & White is still one to conjure with. The new forces within the office are living up to the finest traditions of the three founders, and are giving to the country many superb architectural monuments.

"To tax and to please is as impossible as to love and be wise." The truth of this saying of Burke's is now being brought home to the English protectionists. The Conservatives hope to return to power before long, and their programme calls for protective duties. These, to be consistent, must include duties on grain and meat, but on the question of such food-taxes the Conservative leaders are doing a sad amount of wriggling. First, they said that they would never levy a tax in such a way as to increase the cost of living. Driven from this absurdity, they said that higher wages and increased prosperity would more than make up for a slight rise in the price of food. This not being meekly accepted, they said that, anyhow, they would not levy a food-tax until after taking a referendum on the question. But now they are trying to wriggle away from this promise. Mr. Bonar Law explained on Monday that any scheme of food-taxes would be arranged only as a part of an Imperial preference plan agreed upon with the Colonies. But with what face could the English negotiators say that they must submit the agreement to the voters? Mr. Law's ingenious plea is that for the Conservatives to adhere to their pledge about the referendum would hamper them in high and mighty Imperial negotiations: hence the pledge must be torn up. Yet they say that the English are a plain, blunt people, and do not like statesmen who indulge in subtle refinements of reasoning!

M. Jaurès, leader of the Unified Socialists in the French Chamber, has at last brought forward the scheme of army reorganization which he has been challenged to produce whenever he has risen in Parliament to criticise the present army system. The Socialist leader does not share the anti-militarist views of M. Gustave Hervé. If anything, his proposal is to bring the military ideal into closer touch with the life of the nation by establishing a sort of citizen army. Instead of calling recruits to the colors for a continuous period of two years, all French male citizens between the ages of twenty and twenty-five are to undergo a six months' period of service supplemented by occasional periods of training. But the central point of the scheme is that which provides for a permanent officers' force of only one-third the number required on a war basis, the other two-thirds to be drawn, when the need arises, from civil life. That would do away with the "aristocratic" spirit which at present animates the commissioned ranks of the French army, in the opinion of the Socialists, whatever may be the opinion of foreigners regarding the extraordinarily democratic relations that prevail between French officers and privates. Coming at the present time of crisis, the proposal certainly argues the courage of the Socialist leader's convictions.

The death of the oldest living sovereign in Europe, the Prince Regent Luitpold, removes one of the few remaining figures historic in the founding of the German Empire. It was he who, in the Palace at Versailles, handed to King William of Prussia the letter inviting him to assume the Imperial crown. This he did after having induced his crazy nephew, King Ludwig II, to let Bavaria take the lead—a proposal to which Ludwig was at first violently opposed. But Luitpold's great popularity throughout Germany was founded on other things than this. He was a man of the simplest tastes and devoted to his people. They always remembered his kindly heart and many generous deeds. His love of hunting, which never forsook him—to it he yielded when in his ninetieth year—particularly appealed to the Bavarians. It was on these trips that he freely fraternized with his subjects of the mountains. Assuming the regency at sixty-five, he was then so fixed in his desire for a simple, unostentatious life, and so out of touch with things political, that it was not possible for him to become either a real statesman or a leader of the people. He was just a fine, rugged character, symbolic of the domestic virtues, and quite content to let the politicians and clericals fight out the country's future for themselves.

This they have done with the result that the Catholic Church is more firmly intrenched than ever, and sees in the rising tide of Socialism the one force that menaces its domination. This clerical control has not come about by any deliberate design of the Prince Regent. True, he looked on all Liberalism with suspicion, but even the Liberal newspapers, in reviewing his career at the celebration of his ninetieth birthday, admitted that his political shortcomings were due more to age and ignorance than to any other causes. From his successor not much more is to be expected. Prince Ludwig, whose extremely popular wife died but recently, is hardly the man to grapple vigorously with the problems confronting Bavaria. Grave issues there are which are not on the surface. But all the evils of a priest-ridden land lie underneath. Marriage is made difficult, with the result of an amazingly high percentage of illegitimacy; the lack of education is equally startling, and conditions among teachers really deplorable. Not merely conservatism but reaction is in the saddle, and the curse of the heavy beer-drinking rests on the land. It is useless to turn from this picture merely to say that Luitpold was a splendid patron of arts and sciences, that his charities were great, that under him Munich grew to be the wonderful and beautiful city it is, and that the aged Prince was, as the Kaiser declared, "the incarnation and model of all the princely virtues."

Germany's war on tuberculosis is, in the opinion of our Department of Commerce and Labor, entitled to the admiration of the entire civilized world as the first and most successful of its kind. From an average of 23 deaths per 10,000 of population from this cause in the quinquennium 1895 to 1899, the rate was reduced to 21 during the following five-year period, and to 18.45 during the one ending with 1909. The expenditures on account of tuberculous wage-earners have gone up steadily. Commencing with an annual amount of $240,000 in 1897, the figure rose to $1,400,000 in 1902 and to nearly $4,000,000 in 1909. The economic results of institutional treatment are carefully followed by means of a special inquiry for a period of five years subsequent to the patient's discharge. By "economic results" is meant restored wage-earning capacity to the extent of at least one-third of what it was originally. These results are somewhat better in the case of women than of men. The improvement in these results is measured by the advance from 68 per cent. of patients discharged with their earning capacity (in its legal sense) restored in 1897, to 83 per cent. so discharged in 1909. The whole story, in its general tenor and in its particulars, is a tale of the swift triumph of applied science in a field that preceding generations had not thought of entering.

THE COSTS OF PROGRESS.

Something more than emotionalism enters into the profound effect on the public conscience of the disclosures made before the State Factory Investigating Commission regarding the conditions that still obtain among women and children in industry. At least, it is not a crude, blind emotionalism of the moment. The heart will always respond definitely to the story of babes toiling beside their mothers in tenement bedrooms or in the chill and dirt of canneries. Symbols appeal to the feelings, and the three-year-old child nodding in weary sleep over her work is such a symbol. But, after all, that sleeping child is a symbol only. Our pity is not restricted to the three-year-olds. To-day we feel that it is not only a horrible thing that children of three should be caught in the industrial machine, but that it is wrong for children of four times three to work, or for children of any age to work under conditions which rob them of their heritage of the happiness of childhood and the right to grow up into healthy and efficient manhood. To-day we feel that it is wrong for women to be subjected to hours of labor which cripple them as individuals and as mothers. Our feeling is not merely indignation against a cruel system, but resentment against a stupid system. We do not say, "How sad this thing is," but, "How criminally foolish and wasteful this thing is." It is still emotionalism, but it is emotion conditioned by knowledge.

"If this provision becomes a law," argued counsel for certain manufacturers, in protest against a suggestion that all interior stairways in factories should be enclosed with non-combustible material, "most of the stairways in all of the factories of Utica would have to be rebuilt at great expense." This plea, familiar enough a few years ago, rings strange to-day. To-day we feel that the alternative to the expense of rebuilding staircases in factories is the possibility of another Triangle building catastrophe. Presumably, it will take some time yet to impress on the selfish manufacturer and his legal representatives the fact that the temper of the day will no longer tolerate the striking of a balance between human lives and profits. The new doctrine of scientific management here reinforces the ancient doctrine of "Thou shalt not kill." An industry that can be carried on only by exposing its workers to the daily peril of injury and death is an economic as well as a moral monstrosity. The manufacturer who pleads expense against the safeguarding of life will soon be regarded as a barbarous anachronism.

It is not necessary to view this particular factory owner as a Simon Legree wielding his lash over the backs of women and children. He may not be altogether selfish. He may not be altogether stupid. Consider him as being caught himself in the wheels of the industrial machine. Make all allowance for the helplessness of an individual in the face of a system. Yet our sympathy cannot go to the point of arguing that, because the duty which confronts the employer of labor is difficult, it is a duty which may be slighted. The pious wish that a better world may be brought about without causing anybody inconvenience leads us nowhere. The fact must simply be faced that if fire-trap factories are to be rendered safe for the workers, it will cost some one a good deal of money. If the exploitation of children is to cease, if humane conditions of labor are to be made universal for women workers, it means a possible cutting down of profits for some time to come. Some one has to pay the costs of progress until such a time as the costs are redistributed among the community at large. The factory-owner who protests that his interests will suffer is entitled to no more consideration than the lawyer who will suffer when the enactment of a workmen's compensation law deprives him of the principal source of his income in the form of accident and negligence cases. The judgment of the day has declared for a workmen's insurance, and the legal profession has to pay its part of the temporary costs of this forward step in social readjustment.

It is this plea of unjust discrimination that every sincere effort at reform, outside of industry as well as within, must encounter. Unjust discrimination cannot, of course, be defended as a simple matter of definition. But it cannot be admitted that discrimination in itself is by definition unjust. To admit that, is to tie one's hands forever. The advocates of child-labor regulation have had to contend with a vicious circle of opposition. Thus one State would welcome restrictive laws were it not for the fact that it would be put at a disadvantage with regard to another State, where such laws are not to be put into force. The advocates of tariff reform have met the same argument. This schedule cannot be touched because it will put a certain interest at a disadvantage with regard to another protected interest. To judge from the constant plaint against inequity of treatment, one might imagine that we are living in a world of perfectly adjusted privileges and rights, and that any attempt at change means the disturbance of a perfect equilibrium. Whereas the truth is that the social order is constantly changing, that society is always growing, and that the growing-pains of society cannot be eliminated. If child labor is to be done away with, if tariff oppression is to be reduced, a beginning must be made somewhere. The burden may fall a little more heavily on Smith than it does on Jones. Ultimately, the burden will be readjusted in fairness both to Jones and Smith.

The stirring of the social conscience with regard to the protection of the workers, and particularly of the woman and child workers, involves an industrial readjustment which calls up for comparison the industrial revolution of the nineteenth century from which the present movement is a reaction. The dislocations and rearrangements which followed the use of the factory system fell most heavily, for a time, on the workers. To those English anti-machinery rioters, the introduction of the machine seemed virtually the confiscation of their chances of earning a livelihood. The same kind of error is committed by the factory-owner of to-day who cries out that the application of a higher standard of conscience to industry means confiscation. It must be left to time to teach him that his best interests, like those of society, do not demand the waste of women's and children's lives.

SAFETY IN RAILWAY TRAVEL.

When Mr. J. O. Fagan writes on railway accidents as related to discipline and efficiency, what he says is pretty sure to make interesting reading. His letter to the New York *Times* in regard to the Westport wreck on the New Haven Road, and to the Interstate Commerce Commission's report upon it, is no exception to this rule. Taking up the Commission's statement that "the direct cause of this accident was a disregard by the engineman of the train, 'Second No. 53,' of signals and rules provided by the railroad company to prevent the occurrence of such accidents," Mr. Fagan declares, in effect, that the direct cause was not this particular disregard of rules, but the system under which such disregard is constantly tolerated and men habitually guilty of it are retained in the service. In support of this, he cites, in particular, the bad previous record of the engineman who was killed, along with many other victims of his carelessness, in the Westport disaster; but, as he says, and as every one who has read the Commission's report must now know if he did not know it before, the lack of real discipline exemplified in this particular case is not exceptional, but general. The peculiarity of Mr. Fagan's remarks on this head is that he goes behind the blame cast upon the railway managers for using pressure to procure speed while not using like pressure to insure safety. The Commission, he says, has investigated this matter, but it has failed to investigate the "far more important" allegation "that for years pressure of the most palpable nature has been brought to bear on managers to compel them to retain in the service the careless and indifferent workmen."

We are not prepared to say that Mr. Fagan's views concerning this matter are in all respects sound. For instance, he asserts that, as a necessary corollary of the supervision exercised by the Interstate Commerce Commission over freight rates, equipment, train stops, etc., the Commission "should now go to work and both examine and license those employees who are directly concerned in the operating of the trains, in the same way as those who operate vessels on the sea are licensed." But there is no comparison between these two problems, in point of complexity and difficulty. Nevertheless, we are sure that in again directing attention to the part played by trade-unions in obstructing wholesome discipline, Mr. Fagan is doing a public service. The Interstate Commerce Commission will not have completed inquiry into the causes of the lack of safety on American railways until this question has been cleared up. How the same thing operates in England is illustrated by the railway strike caused by the dismissal of an engineman for intoxication when off duty. Let the Commission, says Mr. Fagan, investigate the pressure on American railway managements to keep the careless man in the service; and he declares that "it is absolutely useless to moralize the situation at the top if we allow it to be demoralized in this way at the bottom."

As we have said, the point made by Mr. Fagan is both sound and important. But, as is natural in a man possessed with a dominant idea, or charged with a special mission, the point is overstated. However serious may be the part played by trade-union dictation in the matter, it is by no means the only source of the evil, nor is it impossible for the railway managers to procure great improvement in safety without waiting for the suppression of trade-union interference. The report of the Commission on the Westport disaster furnishes convincing evidence to this effect. It is not an undiscriminating indictment of the management. In particular, it gives the New Haven Company a clean bill of health on one matter which has been a conspicuous part of the newspaper arraignment. "The roadway and track conditions in the vicinity of the accident are good," says the report, "and the construction of the cross-over was substantial. . . . At the cross-over practically all the ties were new and screw spikes were used, and the track conditions at this point were good." But its verdict in regard to the larger questions relating to safety is very severe, and fixes upon the management a kind of blame which cannot be shifted. The Bridgeport disaster of July 11, 1911, says the report, "was similar in all respects to the accident now under consideration"; yet the management of the road had ignored the recommendations of the Commission in regard to the increase of the length of the cross-overs, to the installation—or at least the serious investigation—of automatic devices for stopping trains, and to the introduction of a rule requiring fast trains to come to a full stop before taking the cross-over. And even in the enforcement of the existing rules, surely something more might have been done than has been done, without inviting any serious clash with the powers of trade-unionism.

As for the relation between the railways and the unions concerning this matter, we are inclined to think that much might be accomplished by a bold policy of frankness and publicity. If the companies are submitting to injurious pressure, which results in paralyzing their efforts to secure the lives of their passengers, we do not believe that they are helpless. The excuse for such submission has some resemblance to the excuse that so long was current among corporations generally for submitting to legislative blackmail. Bribery in our Legislatures could never have reached such dimensions, or been maintained through so many years, if corporations whose purposes were honest had refused to comply in secret with dishonest practices in order to effect those purposes. A little heroic resistance, an open appeal to the public, might have involved some inconvenience and temporary loss, but it would have resulted in emancipation for themselves and in immeasurable gain to the commonwealth. If the coercion of railway managements for the benefit of unfit employees is as bad as Mr. Fagan represents it—and we do not deny that it is—the railways are not compelled to wait for an investigation by the Interstate Commerce Commission to disclose it. A plain statement of the case would quickly bring the influence of public sentiment to bear in favor of whatever disciplinary measures are necessary to make life and limb safe for travellers.

MR. REID AND JOURNALISM.

Despite the somewhat tragic circumstances of Whitelaw Reid's death, his life was one rounded out with the honors which he sought and prized. The troops of friends which he won are hastening to pay personal tributes to his memory. His public position as an Ambassador of long service has brought due acknowledgment of the loss caused by his death. But there must be still many to whom the chief interest and significance of his career lie in his years of labor as a newspaper man. The time during which he was a working journalist was one of great importance in the evolution of the American newspaper; and when its history comes to be written the part which Mr. Reid played in helping to change the tendencies and the spirit of the daily press in this country will require special treatment.

His rise in the newspaper world was not in the least factitious. It was the normal result of hard work and broadening ability. He was not one of our latter-day improvised journalists, with a great fortune enabling them to buy and exploit newspapers to the top of their bent. Mr. Reid came up from the ranks. As country editor, as indefatigable war correspondent, as a Washington writer on public men and politics, then as editorial writer, he displayed the qualities which naturally brought him promotion. And when, after Greeley's death, he came to be in control of the *Tribune*, his work in enlarging the news side of that paper, while retaining and procuring able and even brilliant men to collaborate in its special departments, showed that he knew what was demanded in the conductor of "a journal of civilization."

It is, however, the part played by the *Tribune* under Mr. Reid in the liberalizing movement which so powerfully influenced the American press in the years 1871 to 1877, or thereabouts, that perhaps stands out clearest in his journalistic career. This was the period when the politically independent newspaper first began to set up a new standard, and to show that it could not only live, but flourish. There had been, of course, a few instances of newspapers that refused to bow down in the house of Rimmon. The Springfield *Republican*, under the elder Bowles, had made a reputation for itself as a paper free to speak its mind about men and parties. But it was the Liberal Republican agitation of the years mentioned that brought in the large breath of the new freedom. For a long time previous our newspapers had been, as a rule, grievously hidebound politically. Each one had to be a party organ, and politicians, no matter what they did, could count upon the support of the papers on their own side as regularly as upon the coming in of the tide. But there was a great break-up in 1872, and later. Party leaders were aghast at the spectacle of influential newspapers shaking off party fetters and boldly saying the thing they honestly believed. The Chicago *Tribune* took this independent and defiant attitude along with the Springfield *Republican*, and they were joined by the Cincinnati *Commercial* and the Louisville *Courier-Journal*. The editor of the last-named, Col. Watterson, has lately written for the *Century*, in his characteristic way, half-cynical and slap-dash, of the meetings and doings of the independent editors at the Convention of the Anti-Grant Republicans in 1872. Mr. Reid was there; primarily, of course, in Greeley's interest, but the *Tribune* was soon found kicking over the party traces with the rest of them. After the unhappy campaign was over, the *Tribune* maintained for a time its detached and critical attitude, and did excellent work in exposing the low moral tone which marked the second term of Grant. Later, as everybody knows, it went back and became a thick-and-thin party organ once more. But it had aided in showing the way to a new liberty; and the American press never forgot the taste of freedom which it had in those years. Since that period the growth of independent journalism has been marked. All can grow the flowers now, for all have got the seed; but the seed was largely supplied in that time of ferment when Mr. Reid became editor of the *Tribune*.

Since that day, American journalism has become much more impersonal than it then was. It is the newspaper, not the personality of the man who happens at the moment to be editor, that people speak of. The reasons for this are plain, apart from the lack of commanding figures, if one chooses to insist upon that. The larger organization requisite in the modern newspaper inevitably causes any individual connected with it to wither, in comparison, while the institution as such becomes more and more. In this, we suppose, lies the explanation of the fact often verified that the mixing of an editor in politics, with the inevitable result that he appears, at least, to conduct his paper as an annex to his personal fortunes in public life, is a bad thing for the paper. That the *Tribune* suffered in this way when Mr. Reid began to turn his thoughts to political advancement, is not denied. We seem, in truth, to be setting up a journalistic tradition in this country against editorial office-holding. Abandon hope of political preferment, ye who enter here, is the new motto written over the door of the editor's room. This was not the old American practice; it is not so strictly the rule in England to-day; in France the custom is quite the other way. But its advantages are obvious. It is a part of the price that has to be paid for editorial independence. And the drawbacks of the other plan were so clearly illustrated in Mr. Reid's experience, even with the great rewards and distinguished honors which he attained, that we may be pretty confident that such cases as his will hereafter be highly exceptional.

"RATHER HARD ON TOM."

Mr. J. M. Barrie was in the chair at the recent meeting of the Academic Committee of the Royal Society of Literature. It was a gathering partly in commemoration of authors deceased within the year, partly to hail a rising star. The Polignac prize for the best work of imaginative literature during the previous twelvemonth was conferred upon Mr. John Masefield, for his poem, "The Everlasting Mercy." Mr. Barrie had a few remarks to make upon the standards of style, which it was the duty of the Committee to attend to as far as possible. For it was style that mainly made the difference between one writer and another. It was not the subject of the picture, but the way it was painted. Except for this, there would be no difference between a Venus by Titian and a Venus by Tom Smith. To say this, Mr. Barrie admitted, was "rather hard on Tom."

It is, indeed, hard every way on the Toms who have no style. Even when they are conscious of this, and wish to find out how to acquire one, they are left very much in the dark. They can discover teachers to give them directions, but not to set them examples. Professors of rhetoric are not often successful practitioners. And the great practitioners either do not know how they got their style or will not tell. Mr. Barrie referred to a mysterious thing in connection with all this. He had been lately in the company of a distinguished writer at a club where they were always talking about style. Here was a confessed master of it, yet when he was pressed for information, could give them none at all. The only man in the room who had a style hadn't the faintest notion what it was or how he had come by it. This, too, it must be confessed, is rather hard on Tom.

The fact seems to be that good writing is as incommunicable as any other fine art. You can be taught what to avoid. Your blunders can be pointed out with a sure finger. On the other hand, the best models can be set before you. The great writers with whom you are to spend your days and nights may be put on a vest-pocket list. And incessant practice, self-criticism, the severest discipline at the desk, can be urged. But when all is done, the ultimate secret of style is not and, apparently, cannot be imparted. This is the reason why the efforts of literary artists to explain their art—most of all, to explain their rise—are usually so futile. Stevenson tells us how he played "the sedulous ape" to this and the other master, but it is all little but words to the uninitiate. Teachers and writers of literary confessions pluck off the petals of style, one by one, in their careful analysis, yet ordinarily leave the bewildered learner crying out at the end: "But where is the flower?"

Literary advice to Tom is something from which the well-advised would shrink. Yet an old English journalist recently gave a piece of it which is perhaps worth noting for its novelty alone. He was addressing chiefly newspaper writers, and those who have to keep steadily at writing tasks, year in and year out. Their frequent sense is one of weariness and of being in danger of going stale. In such a mood, the advice of this veteran editor was to read over some of their own writings of two or five years before. His point was this: in their blackest discouragement they could find an occasional gleam of hope from what they had done in the past. Either they would find something very bad in what they had written previously—something so much worse than their worst at present that they could at least thank their stars that they were no longer capable of *that*—or else some bit of good work which would cheer them with the belief that they had not always been idiotic and with the hope that they might again write in a way not to make them ashamed. Such an experiment has its obvious perils. As a rule, a man should preserve his old writings as he would his old love-letters—something to keep but not to read over. There is, to be sure, the example of Swift with his "My God, what a genius I had when I wrote that!" but we believe that this dates from the time when Swift's mind had begun to fail.

Whether style can or cannot be taught, the important thing for Tom and all the rest of us to fix in our minds is that it exists. Help may be given in attaining it, or writers may have to work out their own salvation in seeking it, but either way it is the pearl of great price in literature. It is not necessary to waste words, or to endeavor to invent new phrases, about this, for we all know that style is the distinctive thing in authorship—the thing that it is known by and remembered for. Mr. Barrie made a brief but feeling reference to his friend, the late Andrew Lang; and he said of him in all seriousness that all that he had left behind from the literary point of view was his style. Truly, it is "of the man himself"; and if Tom has got it in him, he may comfort himself with the thought that he may yet bring it out.

HUMOR OF THE EYE AND EAR.

Is the eye more easily tickled than the ear? Do funny pictures have an advantage over jokes conveyed by the printed word? In a sense it is the mind to which the appeal is made in both cases, and the eye, too, which first apprehends it. But as graphic humor must be looked at individually by every one who would appreciate it, whereas fun in print can be relished equally if it is heard read aloud, the distinction is sufficiently valid. It may be admitted at once that pictures have a fundamental advantage in the case of certain sorts of happenings. The mirth occasioned by seeing a person in the act of losing his balance, with coat-tails flying and hat askew, can be fully reproduced by a merely faithful picture of the thing. But narrate the incident to one who has not witnessed it, and you are apt to find that his first concern is to know whether any injury resulted. Grotesque details put in narrative form are presented too slowly. Here a very elementary kind of humor is involved, the success of which depends upon the suddenness of its attack. In a picture the eye gathers up the details almost as rapidly as in actual life. And having given way to the crude fun of the thing, one lingers over the artist's peculiar touches.

This in its lowest form is the humor of the comic supplement. Starting with the small boy's instinct to upset the next fellow's equilibrium, it seldom gets beyond such superficial embarrassments as grandpa wakened by a firecracker or grandma in search of her teeth. Its special field is "practical" jokes. In literature exact equivalents of the comic supplement are not numerous—"Tom Sawyer" and "Huckleberry Finn" go deeper—yet they do exist, and it is significant that several such books have come out within the past few months. The resemblance is so striking that one is tempted to believe that writers, aware of the success of "novelized" plays, have determined to make the comic supplement do similar duty. Here is a sample. A man at a house party looking for his morning bath opens by mistake the door of a room occupied by an old maid. She, in the act of putting on her toupée, is startled, knocks down the curtain pole, which upsets a Louis Seize clock, which falls upon her poodle, who jumps through a handsome Chinese screen. The toupée drops out of the window, through an opening in the conservatory, upon the head of the gardener. He brushes it off, and the next seen of it is months later when it is found entangled in the roots of a fancy tulip. Mistaken for a squirrel's nest, it is lodged as a great curiosity in a museum. Significantly enough, the one thing that saves this story from utter flatness is a pictured illustration of the toupée on the gardener's head. It is bound to provoke at least a smile, but it does at the same time drive home the lesson that certain things which the artist may use with some success, the writer would be wise to leave alone.

In the lower ranges of humor drawings can produce their effect quite cheaply. Many will recall how "Chip's" block-headed little dogs in *Punch* were enough in themselves to give him a vogue. The artist's individual style applied to an obvious situation—the special flirt he gives to a coat-tail or his particular way of perking a nose—enjoys a factitious value. It is possible, however, that the artist can be more poignant as well as more sweeping in his humor than the writer. These qualities are got by creating a suggestion of what cannot be indicated explicitly. Words become too precise for the occasion, while an indefinite tilt of the head may sometimes speak volumes. Every one knows how in a great political campaign it is usually the cartoonist who can best fasten attention upon the big issues. For the "Biglow Papers" and the best of Mr. Dooley's political satire there have been dozens of notable cartoons. Yet between high and low humor, in what may be called respectable every-day humor, graphic form is greatly limited Besides sharing with painting the power of dealing specially with only a particular moment of life, or, if symbolic, with only one or two broad reaches of thought, it has usually to confine itself to the fun of situation; in short, to the farcical. The very medium tends to turn all humor into one of situation. The play on words which when expressed in language is not visualized, when pictured becomes a definite spectacle, "programme drawing," as it were.

Humorous drawing, except for the matter of style, undoubtedly lacks the variety of verbal humor. What may be done in literature with one branch of humor is shown just now by the London set. Shaw, Chesterton, Belloc, Max Beerbohm, to go no farther, get their fun very largely out of what is technically known as "wit," or intellectual sharp practice. It is mainly formal logic applied to life. Touchstone knew the method. Says he to Corin: "Why, if thou never wast at court, thou never sawest good manners; if thou never sawest good manners, then thy manners must be wicked; and wickedness is sin, and sin is damnation. Thou art in a parlous state, good shepherd." And the scandal of sheer logic by which the clown in "All's Well" essays to comfort the Countess, Shaw has virtually elaborated into "Man and Superman." With Shaw, situation grows, not out of human nature, but out of the dictates of logic, though logic worked with all its hidden tricks of ignoring the middle term. Chesterton's essays have the same inspiration, and Belloc and Beerbohm are different only in giving freer rein to the incidental rollicking farce which their logic precipitates. Here the variety among the four men is not so much a question of individual style—the point which so often distinguishes humorous drawings—as it is a matter of emphasis placed on this or that element among the several of which wit is composed.

This leads us back to the question whether the humor of the word, with its more varied possibilities, can ever degenerate to the level of the comic supplement and gain a large following. Yet until books of that kind are advertised as being among the best sellers, we withhold our protest, hoping in the meantime that they will receive from the public every bit of what they deserve.

THE JOINING HABIT.

The S. P. U. O. is, needless to say, the Society for the Prevention of Useless Organizations. It has been founded by a handful of desperate citizens as a means of combating the ravages wrought by the fatty degeneration of the social instincts. Its motto is "Disorganize!" Its emblem is a miniature portrait of John Hampden, the famous Englishman who first refused to pay dues. The charter members of the S. P. U. O. recognize the tremendous nature of the task that confronts them. It amounts to nothing less than waging war against a national habit which is older than the Constitution and will endure long after the referendum has been recalled. Hence the S. P. U. O. entertains no illusions as to the results it may obtain. Uprooting the joining habit is a hopeless enterprise. The Society simply wishes to save such individual feeling and thinking as still hold out above the rising tide of organization. In order to give vigorous expression to its ideals and its programme, the Society has adopted a Constitution in fifty-three articles and a complete set of by-laws. The Constitution provides for the usual officers and standing committees, and, in addition, a Committee on Press and Periodicals, a Committee on Pulpit and Peace Conferences, a Committee on Recent Tendencies Towards Decentralization, a Committee on Coöperative Efforts in Relation to the Cost of Living, and several others. The proceedings of the Society are to be conducted in accordance with Cushing's Manual.

In its prospectus the S. P. U. O., as we have already intimated, eschews all hostility to the principle of organization in itself. "We could not if we would," says this interesting document, "and we would not if we could, do away with the valuable psychological trait which impels half a dozen Americans, whenever they come together, to form an association, adopt an emblem and elect officers, and proceed to carry through their meetings with efficiency and dispatch by a firm suppression of the minority party." The prospectus goes on to say that, for the purpose of giving effect to a policy, a reform, or a revolution, organization is indispensable. It would be idle to deny that a vast amount of good is done every day in the year in the way of encouraging progress and alleviating human suffering by bringing the disjointed efforts of thousands of individuals into harmonious coöperation. But a distinction must be drawn between coöperation for the purpose of doing things, and coöperation for the purpose of seeing, enjoying, and believing things. A society for the suppression of tuberculosis needs no defence. But what shall be said of the mistaken social tendency which, revealing itself at first in comparatively harmless form in the organization of Browning Clubs, ultimately leads to the formation of a Society for the Appreciation of Late Autumn Sunsets, a League for Spiritual Relaxation, and an International Fraternity for the Development of the Individual?

The S. P. U. O. is encouraged to believe that it is not engaged in an altogether hopeless fight, when it considers that at present there is a distinct reaction in public opinion against the fetich of organization. It was seemingly only a day or two ago that all of us worshipped bigness and complexity. To-day we are wondering whether some of these elaborate machines of ours might not have a few thousand less wheels, gears, valves, belts, springs, and buttons, and do just as much good. There are heretics now who question the efficacy of organization as embodied in the Trusts. There are complaints heard to-day that the Church is over-organized. There are complaints that the schools and colleges are over-organized. There are complaints that our sports and vacations and holidays are over-organized. This does not mean that the tendency is all one way. The standardizing, organizing spirit is fighting back strenuously. There are still any number of people who want to organize the Home, who want to organize Child Life, Motherhood, Sleeping in the Open Air, Poetry, and the utilization of the ten minutes that are usually lost between going to bed and falling asleep. The organizing habit is still very strong in the land, but it is an enormous gain that it should be no longer accepted without question. To-day it is no longer held as self-evident that it is better to do a thing in two hours with the aid of a card catalogue than to do it in an hour and a half without one.

The S. P. U. O., at bottom, is anxious

to prove that there is something very desirable lost out of an emotion when it must be experienced in a quorum, and out of an idea when it must be approved by a majority vote. It fears the loss of the principle of individual salvation which it believes has been productive of a great deal of good. It fears the loss of the faculty and the desire to think for one's self, and with it the capacity and the desire to look into one's self for those spiritual resources which surely cannot be quite exhausted. To read quietly in one's corner and not as the member of a George Meredith Club, to walk at random across country on Sunday and not as the member of a walking club, to dream individually and not in conjunction with all the other members of the Karma Self-Absorption Society—such old-fashioned habits the S. P. U. O. thinks are well worth preserving. All persons in sympathy with this view should lose no time in communicating with the Society's Committee on Restoration of Individual Initiative.

THE WESTERN ECONOMIC SOCIETY.

Chicago, December 11.

The Society chose Commercial and Industrial Education as the general topic for its fourth conference, held at Chicago on December 6 and 7. The two sections of the conference devoted their more special attention respectively to commercial instruction of collegiate or university grade, and to the problem of industrial training in public schools.

One group of speakers on the side of the public schools came to report the results of their actual experience. Among these may be mentioned James J. Sheppard, principal of the New York High School of Commerce; James E. Downey, head master of the Boston High School of Commerce; William J. Bogan, principal of the Lane Technical High School, Chicago, and Lorenzo D. Harvey, who spoke of the system of industrial education in Wisconsin. Miss H. Winifred Jevons brought word of the work of the Apprenticeship and Skilled Employment Association of London. But the interest of the audience centred particularly upon the prospect of widened opportunities of industrial training in the immediate future, and upon the question whether this training should be separately organized and administered or developed in the existing public schools under the direction of the present school boards. The most conspicuous advocate of separation was E. G. Cooley, who, under the auspices of the Commercial Club of Chicago, has embodied a proposal for separate industrial schools in a bill to be submitted to the Illinois Legislature. The opponents of such separation were represented by Prof. Ernest R. Dewsnup, of the University of Illinois; Prof. F. M. Leavitt, of the University of Chicago, and various spokesmen from the public schools; and by Frank Duffy, secretary-treasurer of the United Brotherhood of Carpenters and Joiners of America, in behalf of organized labor.

The after-dinner speaking at the banquet of the Society bore mostly upon the industrial education of persons of common-school age. Miss Jane Addams emphasized the social need of training and guidance for the boys and girls who now seem to be sustained only by the saving spirit of their youth in feeling their way from the surroundings of school children to the life of men and women in the working world. Prof. Charles Hubbard Judd, of the University of Chicago, in one of the most impressive addresses of the meeting, urged the importance and appropriateness of contacts with vocational life even in the primary schools. The German Ambassador, Count von Bernstorff, who was prevented by illness from being present, was to have spoken on the German system of commercial and industrial education.

On the topic of collegiate instruction in economic and commercial subjects Prof. L. C. Marshall, of the University of Chicago, provoked active discussion by his plan for the sequential arrangement and standardization of elementary and intermediate college courses. But perhaps the most fruitful feature of the whole conference was the bringing together of the deans of various university schools of commerce to compare their problems, their achievements, and their purposes. In this discussion the long-established undergraduate Wharton School of Finance and Commerce of the University of Pennsylvania was represented by Prof. Roswell C. McCrea; the new Graduate School of Business Administration of Harvard University, by Prof. Edwin F. Gay; the Tuck School of Administration and Finance of Dartmouth College, by Prof. H. S. Person; the Schools of Commerce in Northwestern University, the University of Wisconsin, and the University of Illinois, by Profs. W. E. Hotchkiss, W. A. Scott, and David Kinley, respectively. Prof. L. C. Marshall spoke for the College of Commerce and Administration of the University of Chicago; Prof. E. D. Jones, for the commerce courses in the University of Michigan; Prof. H. R. Hatfield, for the College of Commerce of the University of California. Whatever the other results of this interchange of experience may have been, it is certain that the auditors were impressed by what has already been accomplished in working out a scientific view of business, in winning the adherence of business men, and in progressing thus towards a freshened and vitalized interpretation of even the more academic phases of economics.

James A. Field.

NEWS FOR BIBLIOPHILES.

The new issue in the Connoisseur's Library (Putnam) is Alfred W. Pollard's long looked-for volume, which is now published with the title "Fine Books," and which the author says "should have had the explanatory sub-title: 'A record of books valued for their printing, decoration, or illustration.'" If the book has, as Mr. Pollard states in his preface, been ten years "on the stocks," we may be sure that the reason of the long delay is because he has spent so much of his time in giving information and assistance to other people who were bringing out books of their own. Those who have received assistance from him at the British Museum know that, like our own Wilberforce Eames, when he can help another his own individual work can wait.

The history of printing and book illustration and their development is a large field to be covered in a single volume. To give the necessary facts and leave out the unnecessary ones, and still make the book readable, was no easy task, but Mr. Pollard has achieved even more: he has given us the facts, which perhaps might have been found elsewhere, but he has put life into them by his own explanations and remarks, and made the book one to be read with pleasure as well as for instruction. His chapters on block books and on the invention of printing contain the result of the latest investigations of the German specialists, but the ordinary book-lover will read Mr. Pollard's volume in preference to the publications of the Gutenberg Gesellschaft. The interest in the block books (books in which the entire printed matter, texts, and illustrations, were engraved upon wood blocks), he says, "sprang from an entirely reasonable, but probably incorrect, view of the part which they had played in the development of printing with movable types." They are not as old as they were formerly declared to be, and there is no evidence to suppose that the earliest extant examples were issued before 1450. Block books were volumes for which there was a large demand. Edition after edition could be printed from the same blocks, whereas in the early days types were never kept standing, but were reset for each new edition. So that block books may be said to have been the forerunners of stereotype plates. The few fragments of early and unidentified Holland printing, with a statement about Laurence Coster, told by one Cornelis, a bookbinder, "of great age but clear memory," are the basis of the view that printing from movable types was actually invented in Holland; but they are not of much value when opposed to the long statement in the Cologne "Chronicle" of 1499, and shorter statements in books of earlier date, that Mainz, on the Rhine, was the birthplace of printing.

In the account of the Donatus fragments of which the Costeriana is mainly composed, we find a word descriptive of some of them, "anopisthograpic," meaning "not printed on the back." Notwithstanding Mr.

Pollard, who calls this a "barbarous term," we shall put the word away and use it next time we are describing a single-sheet edition of the Declaration of Independence, or other broadside.

The four chapters on books printed before 1501 in the various countries of Europe "suffice to prove that the purely arbitrary date 1500 and the slang word incunabula [literally 'swaddling clothes,' from the Latin *cunæ*, cradle] used to invest all fifteenth-century impressions with a mystic value, are misleading nuisances." Whether a book was a real cradle infant in the development of bookmaking or a lusty youth is as much influenced by the place as by the date. In Mr. Pollard's words: "Any book which illustrates the relations of the early printers to the scribes, the difficulties which they experienced in their work, and the expedients by which they were surmounted, deserves, whatever its date or present price, to be reckoned as a real incunabula."

Fifteenth-century books, with woodcut illustrations, form the subject of three chapters, in all sixty-five pages. Mr. Pollard writes about these old woodcuts.

Then, after two chapters on foreign illustrated books of the sixteenth century, we come to Printing in England, and the work of Caxton and his successors. At the very beginning, Mr. Pollard favors us with a new surmise as to Caxton's first book, and his relations with Colard Mansion at Bruges. It has been generally supposed that Mansion had a going business there, though not long established, when Caxton joined him, and that two books in French were printed first, before Caxton's English translation of the "Recuyell of the Histories of Troye." In his prologue to this book, Caxton says that by copying it for his friends: "My penne is worn, myn hand wery and not stedfast, myn eyen dimmed with ouermoche lokyng on the whit paper," and "Therefore I haue practysed & lerned at my grete charge and dispense to ordeyne this saide book in prynte."

Mr. Pollard thinks that this was the first book printed at Bruges, that the second, also in English, was "The Game and Pleye of the Chesse," and that, after these two books were printed, a new type was cut and with it the two men printed, in French, "Les Quatre Derennières Choses." Then, he thinks, Caxton set out for England, carrying with him the new type and leaving the old fount for Mansion, who printed with it two more books, heretofore reckoned the first books from the Bruges press, the "Recueil des histoires de Troye" and "Les Fais et prouesses du Jason." And, knowing that Caxton had learned the printing art for the express purpose of easily multiplying copies of his own translation, we may plausibly suppose that that translation, and not the original French text of the same book, would have been his first work. Later English printing down to 1580, the earliest printing in Scotland, and printing in America (a glance merely), are followed by an account of early English books with woodcut illustrations and a chapter on books with engraved plates. The volume closes with a short account of modern fine printing, from Baskerville to William Morris and his followers.

The first chapter in the volume, Collectors and Collecting, has been left unmentioned till the last, in order that we might reread and enjoy it again. In it there is more of Mr. Pollard and less of his bibliographical authorities. On that account our fellow-bibliophiles who collect books not merely to read them, as well as others who "collect old or beautiful china or silver not to be used for eating or drinking from," will find it the most enjoyable chapter of the book.

Correspondence

THE LOEB CLASSICS.

To the Editor of The Nation:

Sir: If it is not too late, I should like to join in the protest of Elizabeth Knight Tompkins. I had been looking forward with great hope to the forthcoming editions, expecting them to do me the same sort of service that Professor Norton's translations of Dante have done for me in Italian. I supposed, with Mr. Bradford, that the books were to be useful to those of us who had read our Greek years ago and partly forgotten it, or whose knowledge of Greek was too scanty to enable us to read without assistance, but who with the assistance of a literal translation would be able to understand and enjoy the original. That is precisely the kind of service that Norton's translation does for the reader of Dante. That service can never be done by a versified rendering of Æschylus or Sophocles.

B. Russell.

Halifax, N. S., December 7.

To the Editor of The Nation:

Sir: If you can still find space for discussion of the Loeb Classics, it may be worth while to say something about one of the latest translations and its use of verse. The offence against Euripides is repeated in the case of Sophocles. Most college graduates who, like myself, follow the study of literature, must take up Mr. F. Storr's volume with a sinking heart. If Dr. Way's old Euripides was a disagreeable surprise, and the new Sophocles is something of a shock, what will happen when Æschylus is led to the slaughter? Mr. Storr "has sought to be faithful," so he tells us, and it is a first principle with him that "a translation must be English; that is to say, it must be intelligible and enjoyable without a knowledge of the original." Mr. Loeb, too, aimed to make the translations "in themselves real pieces of literature, a thing to be read for the pure joy of it." I am unable to see that Mr. Storr's book attains to any one of the virtues claimed or desired for it. Note the "pure joy" of one or two specimens:

> Thou hast come to a steed-famed land for rest,
>   O stranger worn with toil,
> To a land of all lands the goodliest
>   Colonus' glistening soil.

This dental and sibilant horror renders the beginning of the Colonus ode! Again:

> Love, resistless in fight, all yield at a glance of
>   thine eyes.

Alas for Ἔρως ἀνίκατε μάχαν. Even the iambic trimeters often fare little better. Almost every page of Mr. Storr's work has lines that fail to be faithful or to be English, and contrive to be a pure pain to the ear. Read, for example, his rendering of the first hundred lines in "Œdipus Coloneus," or of the famous dialogue between the King and the herdsman in "Œdipus Tyrannus" (lines 1119-1185)—I have chosen passages nearly at random. The translation, throughout, has little for "the college graduates who wish to renew and enlarge their knowledge," it has nothing of the "pure joy" of form, and I fear it will not entice the Greekless reader "to gather an elementary knowledge" of the tongue.

Now, every one will agree with Mr. Storr that verse translations are difficult. He fails in good company. Further, every one would wish, with Professor Wade of Tufts College (*Nation*, December 5), to have translations possessing the quality of "plastic form." But no one will find this virtue in Mr. Storr's product. Where, indeed, can it be found in versions that are suitable for purposes of the Loeb Library? Mrs. Browning's "Prometheus" and Pollard's "Greek Odes," fine as they are, will obviously not do. Even Gilbert Murray's superb Euripides is too free. In fact, the value of the poetic form in such work is, as a rule, inversely proportional to its literal faithfulness. The problem of combining form and faithfulness in a translation is, of course, insoluble, as every one with a sense for language must feel. But, so far as it has been solved, the medium of transference has been prose not verse. For prose, too, has "plastic form," if that expression means anything. Witness the Homer of Butcher, Lang, Leaf, and Myers, in spite of Professor Wade's vain regrets; witness, too, the "Greek Anthology" of J. W. Mackail. And it is strange that Mr. Storr, Cambridge man as he is, finds no inspiration in the classic example of Jebb. Finally, an American scholar with a longing for "plastic form" should not have forgotten the charming rhythmical prose of Professor Palmer's "Odyssey" and "Antigone."

G. G. Sedgewick.

Cambridge, Mass., December 14.

[We print this letter without endorsing the specific criticism of Mr. Storr's work or in any way prejudging a book upon which our reviewer must pronounce. But we do agree with the general protest against the use of verse translations in this edition. The number of letters we have received on this and kindred questions shows a gratifying interest in Mr. Loeb's magnanimous project.—Ed. Nation.]

FANCY AND IMAGINATION.

To the Editor of The Nation:

Sir: As a complement to Mr. Edward Fulton's letter in the *Nation* of November 28, it is perhaps worth while to point out that, long before James Beattie's "Dissertations Moral and Critical," at least one distinguished English critic did not always use the terms *imagination* and *fancy* as synonyms. This was Glorious John. In the "Epistle Dedicatory of the Rival Ladies" (1664) Dryden wrote:

> That benefit which I consider most in it [rhyme], is, that it bounds and circumscribes the fancy. For imagination in a poet is a faculty so wild and lawless, that like an high-ranging spaniel, it must have clogs tied to it, lest it outrun the judgment.

The distinction between the words is made clearer by the following passage from the preface to "Annus Mirabilis" (1666):

> The first happiness of the poet's imagina-

tion is properly invention, or finding of the thought; the second is fancy, or the variation, driving [*v. l.*, deriving], or moulding of that thought, as the judgment represents it proper to the subject; the third is elocution, or the art of clothing and adorning that thought, so found and varied, in apt, significant, and sounding words; the quickness of the imagination is seen in the invention, the fertility in the fancy, and the accuracy in the expression. THE HISTORY OF ART IN OUR COLLEGES.

To the Editor of The Nation:

SIR: In the *Nation* for November 21 there was a very favorable notice of a monograph on "The Study of the History of Art in the Colleges and Universities of the United States," by E. Baldwin Smith. It is said that this is a register of all academic courses in the history of art offered in America, that it is a brief history of the subject, that only Harvard and Princeton offer reasonably full university facilities for research, etc. Since the prefatory note by Professor Marquand states that Mr. Smith will be grateful to be set straight, if the information is defective, and since the pamphlet purports to help students "choose the place where they can carry on their advanced study," it is only fair to state that the information in the pamphlet is so extremely defective as to render it useless, and that the study of art in our colleges is far more extensive than this pamphlet shows. It would be idle to tabulate all the omissions and errors, but, lest my criticism seem unfounded, I call attention to a few omissions for classical archæology alone, which I recall from memory or experience. The list could easily be greatly extended.

No mention at all is made of the archæological seminaries, which are the most important organ of training in graduate and research work. Seminaries on Cretan Antiquities, Numismatics, Vases, Sculpture, Roman Topography, etc., are held at Bryn Mawr. Every year at the Johns Hopkins University there is a seminary in Greek Archæology and another in Roman Archæology (the subject varying from year to year). Also at Brown, Chicago, California, and elsewhere there are archæological seminaries. For Bryn Mawr no mention is made of the European fellowships or of courses on Greek and Roman Life, on Pompeian Life and Art, or of the Journal Club, which in some years we have also at Johns Hopkins. For Columbia none of the many archæological courses given by Professors Egbert, Wheeler, Perry, Young, and others is noted. The same is true for Cornell and Pennsylvania, where the archæologists Andrews and Bates and their courses in ancient art are not even tabulated. As for Johns Hopkins, there is a professor of Greek Archæology and Epigraphy and a professor of Roman Archæology and Epigraphy, whereas at most universities there is only one professor (or assistant professor) for both, called a professor of Classical Archæology—so at California, Chicago, Yale, and Harvard. Columbia has a professor of Greek Archæology and Art. At Johns Hopkins, in addition to the six courses mentioned in this pamphlet, there are courses on the Mycenæan Age, Greek Sculpture, Greek and Roman Architecture, three different courses in Greek Epigraphy (I include these because, in the case of Dartmouth, Pennsylvania, and Syracuse, they are included), Greek Private Life, Topography of Athens, Topography of Greek Sites, Strabo, Pausanias, Coins and Gems, three courses in Roman Topography, three in Roman Epigraphy, Greek and Roman Painting, Roman Private Life. Seminaries have been given on Problems in Pausanias, Problems in Greek Vase-Painting, on Greek Inscriptions, on Roman Inscriptions, and Numismatics; and other subjects will be taken up in future years. For the University of Chicago the courses in Fourth Century Greek Sculpture, an introductory course in Classical Archæology, courses on Greek Topography, and on Olympia, Delphi, and Athens, on Gems, on Greek Vases, on Red-Figured Ware, on Greek Life as illustrated by the monuments, on Greek Epigraphy, Roman Private Life, Roman Topography, etc., are omitted. No mention is made of the fellowships and scholarships in Classical Archæology at Chicago, Johns Hopkins, and elsewhere, although this pamphlet states that Princeton offers two fellowships in Art and Archæology. Many omissions occur in the courses tabulated for Brown, California, Cornell, Columbia, Harvard, Iowa, Pennsylvania, Yale, and others, and many mistakes occur even in the courses listed.

A circular was sent to some four hundred institutions, many of which failed to answer. But the circular called for information for the year 1912-13 *only*, and it was not stated that the information would be published in a pamphlet for those who contemplate further study, which would naturally mean graduate students, and which certainly must mean those who contemplate study after 1912-13. It is clear, then, that the pamphlet will not be of much use to "those who contemplate further work in the History of Art," enabling them to "choose the place where they will carry on their advanced study." It will not be of much use, because only for Princeton does it give the courses for the next few years. The publication of a single year's schedule gives no adequate notion of the work at any university, for most universities do not repeat or ought not to repeat the same courses in art every year, but have a cycle of courses extending over three or four years. Mr. Smith would have seen this in the case of Johns Hopkins, for example, if he had read carefully page 153 of our last Register, which he had at his disposal. He could have procured the information for other universities and colleges also by consulting their catalogues for several successive years, or by writing to the professors of art and archæology themselves.

Let us hope the pamphlet will be withdrawn, and the work done over again in a scientific and accurate manner. Mr. Smith has not only been inaccurate, but he has not given us what is needed. What is needed is a statement of the courses given in the present and planned for the future, not only at Princeton, but at other universities, or a tabulation of courses given during the last five years, which are likely to be the courses given during the next few years.

DAVID M. ROBINSON.

Johns Hopkins University, November 30.

[With reluctance the *Nation* gives space to the register of *errata* and *addenda*, many of slight importance and all of the sort which by courtesy and good academic usage are generally exchanged privately among colleagues. That seminary courses are not registered specifically as such seems to us an imaginary grievance. Whenever serious graduate instruction is undertaken in America the seminary method is in use. Some universities, while using the method, prefer not to use a pretentious name for small courses. Unquestionably, Mr. Smith's pamphlet would have been more useful if he had included prospective courses. But the tabulation was made in response to an emergency call from the International Congress of Art History. An apparently preferential treatment of Mr. Smith's own University, Princeton, is due to the fact that Princeton, both in departmental and general circulars, presents her whole art curriculum accessibly. In the cases of other universities who scatter their art courses under other departments, some regrettable oversights occurred. Very few of these, however, seem to affect the general usefulness of the pamphlet. Intending graduate students know enough not to imagine that graduate courses are annually repeated. In short, the alleged defects are very rarely of a sort to mislead interested persons. Among the few really grave omissions one is obviously deeply to be regretted—that of the Archæological Seminary at Bryn Mawr, which is conducted by Professor Robinson.—ED. NATION.]

Fires. By Wilfred Wilson Gibson. New York: The Macmillan Co. $1.25 net.

The Poems of Rosamund Marriott Watson. New York: John Lane Co. $1.50 net.

It is significant that so many of the latest issues of verse are one-piece volumes. There are only a few of them which contain more than a single satisfactory poem, and many of these are remarkable by reason of some one poem so superior as to bear no comparison with the others. For this reason they offer little surface to the critic; they are happy not so much in their poetic character as in some occasional mood or suggestion. Indeed, many of them, like Mr. Munger's "Mood," frankly acknowledge their indebtedness to just this sort of inspiration:

"When this next Summer shall come in," I said,
"Nothing shall be as it hath been of yore,
Its scroll shall speak, its 'chanted, flowery floor
And azure Heaven; its wonder shall be wed
With magic answers long withheld before,
And in the flooding light it shall outpour
The dumb and stricken Darkness shall lie dead."

And now, when in the dusk the cricket sings,
And Night comes early and the waiting days
Gather in mist and hover on dull wings,
While yet one gleam of the vain vision stays,
Winter on this its old gaunt shadow flings,
The same quest still, the same known barren ways.

In their way such verses are a veritable *tour de force;* it is as impossible for the writer to repeat them as to recall the occasion which gave them birth. As in the case of Mr. Greer's "Poe," a second attempt would be a mere pastiche, a palpable artifice:

Meshed in midnight, misty-moonèd,
  In a realm of men unwist,
To a weird harp, tensely tunèd,
  Sings a mournful melodist—
And his harpstrings are the tresses
  Of a maid whom Death hath kist. . . .

Sweet—ah, deathly sweet!—the music,
  Welling from his lips of doom,
Velvet-soft as notes of vesper,
  Swooning in a haunted doom—
Strange as words young phantoms whisper
  In a hollow tomb.

Weird—unearthly weird—the echoes
  Of each quivering cadence fled,
Ghosts, foredoomed to sigh forever,
  Tremulous, unsilencèd,
Till Time falter, spent and breathless,
  And Death's self be dead.

But perhaps it is in the sonnet that anything like success apart from absolute genius or sustained training is rarest. And yet it is possible to pick out occasional sonnets of a very fair order of merit, due apparently to some momentary and impermanent exaltation of feeling. The following, entitled "After Long Life," by Miss Robinson, is an instance:

After long life if I should be bereft
Of this Earth's passion and its endless pain,
And then, if I could live my life again
As one by Death forgotten and Youth left,
I wonder would I long with all the deft
Desires of my own free, unshackled brain
To enter Life's arena? Would I gain—
No more 'twixt hope and mortal anguish cleft—
A disembodied view of soul and sense,
A swift solution of the mystery
Of Life's great pageant, and the poor pretence
Of Heaven's high-handed Inconsistency?
So visioned, would I still kneel unto God,
Or Yield obeisance to the soulless sod?

Nor are these two, the one to Death and the other to the Emperor Julian, by Mr. Goldsborough and Miss Palmer, unworthy of consideration:

There is no death. Not God himself can kill,
He can but change. Hunger and life are one—
And this is fate—to be and be undone,
And with what dubious baleful draughts to fill
The goblet of our being, ere the rill
Of time veers otherwhither, and what sun
Illumes the path of races yet unrun
By souls abandoning pale forms grown still!
Hence, when I pray for death, I know I pray
For what no fate can give—for what the years
Know not—nor which the swayed eternal spheres
Meet upon any paths of night or day.
Abidest thou beyond the scope of God?
Then seek me, Death, by ways thou ne'er hast trod.

In student's garb, a lithe accomplished lad
Unfriended—yet self-centred and calm-browed—
He dwelt, amid the disputations loud
Of an imperial court gone schism-mad,
Pledged to no cause, for that his fears forbade.
A scholar—first of all to learning vowed—
More, of ideals than of his birthright, proud—
Devout, heroic, chaste—like Galahad.
The boldest legions follow where he leads
Down that long River servile to his oar:
He lifts his faith above the clash of creeds;
And stakes his fate on the grim game of War.
Dead: while upon his life an era hung;
Perishing—with his gods—too rash; so young.

Mr. Drinkwater, too, while invariably writing with neatness and practice, seems at intervals, it must be confessed, very much superior to himself. His manner is never sombre; he has a way of touching a grave subject with reassuring lightness. But at times his seriousness, without becoming heavy, deepens—with great advantage to his style, as in the verses which he calls "An Epilogue for a Masque":

A little while they lived again, and lo!
Back to the quiet night the shadows go,
And the great folds of silence once again
Are over fools and kings and fighting-men.

A little while they went with stumbling feet,
With spears of hate, and love all flowery sweet,
With wondering hearts and bright adventurous wills,
And now their dust is on a thousand hills.

We dream of them, as men unborn shall dream
Of us, who strive a little with the stream,
Before we too go out beyond the day,
And are as much a memory as they.

And Death, so coming, shall not seem a thing
Of any fear, nor terrible his wing.
We too shall be a tale on earth, and time
Our pilgrimage shall shape into a rhyme.

Even Mr. Alexander, who moves through a wide range of mood to a variety of measures, is hardly master of them all. He has his distinctively better moments, which seem to coincide with an unusual gravity of feeling:

Oh, Face Divinely Human, grave and tender,
  Deep-lined whereon I trace
Sad thoughts, that mar the else ineffable splendour
  We might not dare to face;

Lord, Lord, I see the beauty of Thy Being,
  And of Thy Words that shine
Star-like across dim ages; but the seeing
  May never make me Thine.

The solemn, sacred service of Thy Preaching
  Lies patent to mine eyes.
Yet what my soul might gather of Thy Teaching
  My Pagan heart denies. . . .

Still must I hear in western woodlands ringing
  The Syrinx pipes of Pan;
Striking old chords of recollection, bringing
  My vales Arcadian.

Still must some Pagan Almond Flower of beauty
  To which my heart shall cling
Bloom from the barren Aaron's rod of duty
  In perfect blossoming.

On the whole it cannot fail to strike the reader of current verse that there is something a little fortuitous, a little factitious in much of the poetry that gets itself published nowadays. No wonder that so few writers produce a second volume. Even Mr. Viereck has threatened to leave the muse for the ticker. Apparently poetry is ceasing to be a vocation. And yet even as a diversion it is hardly to be flouted if it continue to produce such admirable *vers d'occasion* as Mr. Garrod's—for instance, his lines to J. L. S.:

To you at least these barren rhymes
  Will speak of all they do not say,
And bring from unforgotten times
  The things that cannot pass away:—

The Devon places and their breath,
  The open moor's untrammelled room,
The gold gorse shot with silver heath,
  The peat-stream and the quiet coombe,

The bridge that carried once the cars—
  Or so we deemed—of Celtic kings
Pursuing unremembered wars
  And dreaming of immortal things;

It may be as they went their way
  They paused to see the sunset stir
With purple of the dying day
  The green and gray of Bellever;

Or, if those old unfeeling kings
  Passed all that glory coldly by
And in their proud imaginings
  Went to do battle and to die:—

Their brows at least the moorland wind
  Washed; and their blood divinely beat;
And all that never touched the mind
  Gave lightness to their faring feet. . . .

I, dreaming in the dreaming hill,
  I, singing to the singing stream,
Woo vainly all they felt, and still
  Miss—or I cannot hold—the gleam.

There is some encouragement, too, for a continued belief in the genuineness of the poet's calling in the persistency of a few poets. Among others there is Mr. Sutherland, who continues his "Idylls of Greece" without apparent fatigue or discouragement. It is the tale of "Idas and Marpessa" that he handles this time. And while quotation is difficult in the nature of the case, the following description may serve to give some idea of his treatment:

And now the heights were silent. Cloud on cloud,
With fleecy shoulders leaning each to each,
Took for the night their stations, while the winds
Remain'd without and roam'd, disconsolate,
The starry highways. One by splendid one
The gods lay down to wait Aurora's call
To see the dayburst, note with ecstasy
The modest flower's unfolding, and delight
In that first note with which the happy bird
Heralds the day and all its promises.
Austerely silent, at the feet of Zeus
They fell asleep, or gazed through half-closed eyes
Upon the face that tower'd over them.
And once again, like huge and brooding birds,
The watchers of the tragedies of men
Lay couch'd amid the cloud-mass stillily;
Prepared to dream of flights against the sun,
Enormous circlings to the pleasant earth
Or swift descents through endless gulfs of space.

For some reason or other the tale or story in verse appears to be coming into vogue again. Though it is impossible to extract from them, two volumes of this kind, one by Mr. Masefield and one by Mr. Gibson, are unusual enough to require notice. While the latter is anecdotal and sketchy, they are both of them singularly reminiscent of Crabbe in subject and manner—though to be sure it is Crabbe modernized and even a little vulgarized. Still the inspiration is sufficiently remarkable.

Among recent collections the poems of the late Mrs. H. B. Marriott Watson is the most considerable. The greater number of the pieces have been published already; but a new series, "The Lamp and the Lute," which was to have appeared separately in the spring, is also included. It is from this addition that the following lines, entitled "Thalassa" and inscribed with the name of Walter Raleigh, are quoted:

By lonely outland coasts and strange isles set
Where vast green waters surge and great winds blow,
They say that sea-whelmed souls go sailing yet,
On swift white wings the drowned folk come and go.

So would I fare—O Thou who didst decree
The sea-mew's soul in this poor earth of mine,
Bidding my very sense and spirit to be
Deep tinctured with the sea-breeze and the brine.

Shall it not fall that when the last light fails,
The doors be opened and the long lease run,
My ghost may go perchance on silver sails
To wander 'twixt the sea-foam and the sun?

CURRENT FICTION.

The Financier. By Theodore Dreiser. New York: Harper & Bros.

Turgenieff dismissed a pair who prospered on the fruits of iniquity with this observation: "Everything in the world, both good and bad, is bestowed upon a man, not in accordance with his merits, but as the result of some unknown but logical laws which I will not even take upon myself to indicate, although it sometimes seems to me that I dimly discern them." These laws Mr. Dreiser is prepared to declare unto us. Scanning the phenomena of success afforded by our national life, he selects a typical career to illustrate their workings—a perfect specimen of the American financier whom he represents as having lived in the Philadelphia of two generations ago.

Briefly to summarize the achievements of thirty-odd years, this genius of finance made a fortune in local speculation; saw it wiped out in the collapse of the market caused by the Chicago fire, and his share in the time-honored traffic in city funds thereby brought to light; paid the penalty of this exposure by a year in prison; and, a few months subsequently, having recouped himself to the extent of $100,000, carried his new-made fortune West. From the time when young Cowperwood took his first object-lesson from an aquarium tragedy, watching an unwilling squid appropriated bit by bit by a relentless lobster, to the day when in the fulness of his powers he migrates from his native habitat to a freer field of development, the study leaves little to be desired from a biological standpoint.

To our thinking, Mr. Dreiser is far and away the ablest humanologist at work in the American field. True, much that is fine slips through his net. But that in itself is no cause for dissatisfaction. Other novelists who have had anything like his power of analysis have been uniformly predisposed to confine themselves to what is choicest and most attenuated in our national life. We rejoice that Mr. Dreiser is not too dainty in his selection, especially since his grasp upon what he has apprehended is so stout. The collection of types in this case is remarkable, both for its representative completeness and for the consistent individuality of each character. Still more remarkable is the singleness of intention with which they are analyzed, and as it were, comparatively estimated. Who is fittest to survive amid the forces of man's own creating? The answer is, for this *milieu* as for the jungle, he who is most vigorous, most acute, and most intelligently selfish—in a word, Cowperwood. He is the standard. Other characters are measured thereby and their fates justified. Small pity is wasted on those who fall by their deficiencies, as Stener, the flabby-minded city treasurer, who paid the natural price of being other men's tool, and the temperamentally unresponsive wife of whom Cowperwood quietly rids himself. Whatever sympathy Mr. Dreiser permits himself is expended on those who fail by the superabundance of their endowment—a superfluous capacity for other motives than self-interest. The reader's cordial partiality is enlisted for Butler, the old Irish contractor and politician, whose daughter becomes Cowperwood's young mistress. He is vulnerable in his large, fatherly heart, and the retaliation which his strength renders so disastrous to Cowperwood is still more fatal to himself. Aileen herself, though we leave her in the ascendency of her youth legally established as Cowperwood's wife, shows doubly marked for later discard by the ineradicable crudity of her taste and the uncontrollable force of her affections.

It is in his *exposé* of character and relationships and his constructive feeling for human drama that Mr. Dreiser is distinguished. His literary imperfections are many and glaring. He only speaks right on—interminably, diffusely, redundantly, with no stylistic guide beyond a warm feeling for an apt phrase. His attempts to identify his story with a definite period in the past are strangely intermittent.

Even more exasperating are his rambling incursions into the field of ethical speculation. The ease with which he walks through the things he does not see is certainly extraordinary. But he is merely out for exercise—nothing so stern as pioneering. Those who accompany him most willingly will soonest perceive that they are coming back in the end to the point they started from. To the best of our discernment, the three essays in unconventional morality which he has already accomplished in "Sister Carrie," "Jennie Gerhardt," and "The Financier," have not yielded one conclusion that seems to him worth a whole-hearted defence. Obviously, until his own convictions have clarified, he can do little to inform our understanding of right and wrong.

The Best of a Bad Job. By Norman Duncan. New York: Fleming H. Revell Co.

We are wont to pride ourselves on the fact that sentiment does not play its old bold part in our literature. Even half a century ago, English and American fiction was all awash with sensibility. Ladies still sighed, and drooped their lashes and fainted their way through the life of books, at least; bachelors still confessed to reveries; and the wide, wide world was a place of warm and somewhat self-conscious emotion. Nowadays our self-consciousness has taken another turn. Anglo-English reticence grows upon us. Colonel Newcome and Little Nell died in the best manner of the day: it is a manner now relegated to the shabby gentilities of literature. Broken hearts are no longer worn on sleeves, and scenes of overt pathos are left to those great repositories of unfashionable relics, the stage and the page of melodrama. We have grown a trifle cowardly withal. Fear of sentimentalism is in danger of producing a hardness and dryness of manner which do not really express our inmost feeling. There are moments when every one of us is at heart a sentimentalist—and the better for it, since they are only moments. There is even a season of the year when (thanks to the author of "Little Nell," they say) we agree to abandon our pretence of insensibility, and to play our joyous part in a Christendom of sentimentalists.

Mr. Duncan is one of the writers who ought to be approached in this mood, if at all. His is a gospel of sensibility. The Old Tom Tulk of the present story, the Skipper Tumm, who tells it, and his random audience of Labrador fishermen and traders who listen to it, all dwell within that zone of ardent and tremulous feeling which the traveller must enter with the eyes and ears of a child if it is to mean anything to him. Old Tom Tulk has known an ordinary lifetime of hardship on the Labrador seas, when his great sorrow comes in the loss of his young grandson. The boy is a cripple and a consumptive. His death is looked for, led up to by inches, and no drop of pathos is left unextracted from the final scene of parting. The boy has bequeathed Old Tom his gospel, "to make the best of a bad job"; and he buckles to the job of living again for the boy's sake. Thereafter no misfortune shakes him. He is presently cast away on the ice and becomes snow-blind. A "short allowance" of sight is restored to him, but it is chiefly by his cultivation of other faculties that he continues to captain his fishing vessel, caps his career with an amazing performance of pluck and skill, and fulfils his ambition to leave a tale to prove the truth of his gospel, "a tale t' be told in the forecastles o' the Labrador craft o' windy nights in harbour." So Old Tom Tulk passes, leaving as legacy the trick of steering by the echoes in foggy weather, and as epitaph his favorite motto: "My friend is Laughter from Get-Along-Somehow, an' my best bedfellow is called Grit."

The Rich Mrs. Burgoyne. By Kathleen Norris. New York: The Macmillan Co.

Like "Mother," this is a pretty sermonette artfully designed to inculate wholesome sentiment in the women to whom it is addressed. The preacher has the secret of making common-sense palatable—if anything, *too* palatable, like the medicinal compound of which it is vaunted "children cry for it."

It is very pleasant to read how Santa Paloma, Cal., improved under the winsome example and wise precepts of this nice young widowed heroine—Santa Paloma has so perfectly the air of the modern California town, its "best set" is so like, in its follies and its friendliness, the young married folk we meet in other small towns, and each step of the betterment is accomplished before our eyes with such a cheerful wealth of lifelike circumstance. It is pleasant also to behold a deserving hero promptly delivered out of many difficulties by a brisk feminine hand. It is only after we have seen Santa Paloma well on the way to the millennium, and our hard-working, happy pair safe on the road to matrimony, that we begin to remember that the course of true reform seldom runs so smoothly, and that it was all so pleasant precisely because it was too good to be true.

BYZANTIUM.

A History of the Eastern Roman Empire, From the Fall of Irene to the Accession of Basil I (A. D. 802-867). By J. B. Bury, Regius Professor of Modern History and Fellow of King's College, in the University of Cambridge. New York: The Macmillan Co. $4.

Twenty-three years ago Mr. J. B. Bury, a recent graduate of Trinity College, Dublin, attracted favorable notice of the historical scholars of the world by a remarkable work in two volumes on the Later Roman Empire. The epoch included in this youthful attempt extended from the division of the realm of Theodosius the Great between his two weakling sons, Arcadius and Honorius, to the crowning of Charlemagne in the reign of Queen Irene (800 A. D.). It was treated in a leisurely narrative without much distinction of style or weight of reflection, but with abundance of knowledge and unusual breadth of vision. Clearly the young historian had gone to school to Freeman.

The promise of this striking beginning has been richly fulfilled in the past two decades. Professor Bury has now to his credit the standard brief history of Greece in the English language and the only authoritative life of Saint Patrick. His edition of Gibbon rightly takes precedence of all others, and the new "Cambridge Mediæval History" is being executed according to his plan. He has edited texts of the Nemean and Isthmian Odes of Pindar, published Harvard lectures on "The Ancient Greek Historians," and contributed many articles to the scientific journals.

His latest volume is in a way a continuation of his youthful venture. It deals, however, not with two centuries but with two generations only—the fateful sixty-five years of the so-called Amorian dynasty. The increase of the author's experience, power of judgment, and critical faculty, moreover, makes it really an independent work. It is, in our opinion, the most finished book which Professor Bury has yet written, and is perhaps the most important work on Byzantine history which has thus far appeared in the English language.

The author's theme and attitude are defined by himself near the beginning of his last chapter:

> The Amorian age [he says] is apt to be regarded as an inglorious interval between the rule of the Isaurians, who renovated the strength of the Empire, and the brilliant expansion under Basil I and his successors. The losses of Crete and Sicily have been taken as a proof of decline; the character and the régime of Theophilus have been viewed with antipathy or contempt; and the worthlessness of Michael III has prejudiced posterity against the generation which tolerated such a sovran. This unfavorable opinion is not confined to the learned slaves of the Papacy, who are unable to regard with impartial eyes the age of Theophilus the enemy of icons, and of Photius the enemy of the Pope. The deepest cause of the prevalent view has been the deliberate and malignant detraction with which the sovrans and servile chroniclers of the Basilian period pursued the memory and blackened the repute of the Amorian administration; for modern historians have not emancipated themselves completely from the bias of those prejudiced sources.

> In the foregoing pages we have seen that, while even detraction has not ventured to accuse the Amorian rulers of exceptional rigor in taxing their subjects, the Empire was wealthy and prosperous. We have seen that it maintained itself, with alternations of defeat and victory, but without losing ground, against the Caliphate, that peace was preserved on the Bulgarian frontier, and that the reduction of the Slavs in Greece was completed. Oversea dominions were lost, but against this we have to set the fact that the Amorian monarchs, by taking in hand the reconstruction of the naval establishment, which the Isaurians had neglected, prepared the way for the successes of Basil I in Italy. We have still to see what services they rendered to art, education, and learning. In these spheres we shall find a new pulse of movement, endeavor, revival, distinguishing the ninth century from the two hundred years which preceded it. We may, indeed, say that our period established the most fully developed and most pardonable self-complacent phase of Byzantinism.

The book opens with a detailed account of domestic policy and events. The narrative is styleless in the best sense. Truth is never sacrificed to an epigram nor precision to rhetorical effect. Artless the story certainly is not. Professor Bury has steeped himself in the Greek, Arabic, and Syrian sources. He views them critically, of course, and confronts them not only with one another where that is possible, but also with the archæological and epigraphical records, which under his skilful management are a formidable adversary of falsehood. At the same time, however, by a careful use of stories, anecdotes, and legends, culled from histories, chronicles, pamphlets, and hagiographies, he contrives to surround his actors and incidents with the atmosphere of mediæval Constantinople, an atmosphere of intrigue, piety, superstition, luxury, elegance, prurience, tolerance and intolerance, reverence for the sanctity of human life and atrocious cruelty—the strange blend of opposites which carries ninth-century Byzantium so far away from our modern experience.

Before proceeding to deal with foreign policy and events, Professor Bury interpolates two chapters, one, entitled Ignatius and Photius, in which the great ecclesiastical controversy of the age is formulated and interpreted with such force and clarity that it appears no longer trivial but almost worthy of its intense contemporary interest, and another on Byzantine finance and government which is at least a partial illumination of a very dark place. After the foreign relations have been considered in five chapters, the narrative ends with an effective characterization of art, education, and learning in the Amorian period.

The five chapters on foreign affairs cannot fail to command the attention of historians at large. For what student of history can afford to ignore a work in which the foundings of Venice, Baghdad, Kiev, Itil, and Pliska are described with the aid of new or inaccessible materials? In this part of his volume Professor Bury deals, not with an obscure epoch of Byzantine history, but with the history of the world from the Byzantine point of view. The political map of Europe from the Ural Mountains to the Baltic Sea ceases to be a bare patch and becomes animated with Patzinaks, Khazars, Magyars, Bulgarians, Russians, Servians, and other Slavic, Finnish, and Turkish peoples whose institutions are sketched and whose movements are interpreted with reference to Byzantine projects and impulses. Here Professor Bury's knowledge of the Semitic and Slavic languages has enabled him to use stores of information hitherto beyond the reach of the ordinary English and American student of history

The reader who demands that history shall give him the thrills which he gets from the novel may not relish even the first part of this "History of the Eastern Roman Empire"; but to the man who cares for the niceties of historical research and composition the book will give a rare pleasure. The specialist may find errors of omission and commission. Where the field is so broad they are unavoidable. But he is bound to envy the author his amazing control of the modern literature of the subject. What the general reader will miss most—intimate and truthful characterization of the chief men of affairs, and comprehensive description of the social and economic foundations of the state—Professor Bury denies that it is possible for any one to give him. He may be right, but we surmise that a Theodore Mommsen or an Eduard Meyer would have made the attempt.

The Autobiography of an Individualist. By James O. Fagan. Boston: Houghton Mifflin Co. $1.25 net.

A reader unfamiliar with Mr. Fagan's earlier books might well be puzzled to understand how a man passing an obscure and uneventful existence in a railway switch tower at West Cambridge, Mass., should expect the American public to have any interest in his life. But many will recall the impression created by "Confessions of a Railroad Signalman" and "Labor and the Railroads," and will not have forgotten the clear vision and the courage with which the weaknesses in the railway labor situation were exposed. Whether or not one is in agreement with Mr. Fagan's views, and a considerable number of close students of the problem are not, one must recognize his sincere and earnest purpose. That same spirit dominates his autobiography; his gospel of individualism as applied to railways is his sole thought; it explains and justifies his book.

His life in Scotland, in South America, and in South Africa was not eventful enough to be of any general interest, and has its significance only in the fact that in the author's belief incidents of that period profoundly affected his thinking and influenced the development of his philosophy. That philosophy applied to the railway industry is simply a plea for the restoration of the freedom of the individual—freedom from the red tape of officialdom, and from the tyranny of the labor union—and for a closer and more personal relation between the directing force of the railway and its employees.

Of particular interest is the portrayal of New England railways in the eighties, which describes a situation in some respects akin to that which the author wishes to see restored. He asserts, for example, that "with the same consecration to duty to-day as then, the modern accident problem would lose its significance."

One is involuntarily attracted to this quiet man, unique in these days. While working as night operator at East Deerfield at eight dollars a week, he received the offer occasionally of an increase in salary. "I told the authorities," he says, "not to bother about it, and they did not." He accepted a shift at the West Cambridge interlocking tower because it reduced his hours of duty from twelve to eight, brought him near the libraries, lectures, and churches of Boston, and gave him more time to devote to the study of social and industrial problems. After referring to "progressive people" who recognize no condition as sound in which one is not forever on the jump towards something better, he sums up his attitude towards life with the following delightful comment: "Such people have little appreciation for conditions and individuals in this world that wisely slow up or stand still for inspirational purposes."

Those of us who have many times marvelled at the attractiveness of style displayed by one whose pursuits have not led him along literary paths can now have our curiosity satisfied. At East Deerfield he carried an English dictionary in his pocket, which he consulted on his walks. He read the book through three or four times, and reinvestigated many of the words in larger dictionaries. At West Cambridge in the signal tower he devoted his spare time to the construction of sentences, and when he launched into narrative he rewrote his first story at least one hundred times. A thorough drilling in Latin and Greek in his youth came to his aid. He says, "As a simple practical equipment for life's journey, what may be called my classical foundation seems to me now to be worth all the other features of my school education put together."

Unfortunately, he is not infallible. After enjoying the pleasures of good English until the work is nearly ended, the reader suffers a painful shock when he comes upon this: "Out of a caldron of industrial and political interests and factions on the railroad, he must pluck by hook or by crook, in some way, the flower of satisfactory service."

Myths and Legends of Japan. By F. Hadland **Davis**. With thirty-two full-page illustrations by Evelyn Paul. New York: Thomas Y. Crowell Co. $3.50 net.

Like some other recent writers on Japan, the author confesses his prime indebtedness to Lafcadio Hearn, "who first revealed to me the Land of the Gods." It is not therefore surprising to find that there is more of impressionism than of scholarly finish in his handling of Japanese matters. Yet he starts out in his preface with a long list of authorities from Prof. Basil Hall Chamberlain and Dr. W. G. Aston to the late Rev. Arthur Lloyd. Hearn's pupils seem to copy his weaknesses rather than his virtues, and to distort in a blundering way the country they profess to elucidate.

Certainly no critic would have objected more strenuously to statements made in this book than the late Dr. Aston, whom Mr. Davis is so fond of quoting. "Shinto has taught her [Japan] to revere the mighty dead; . . . the very nature of Shintoism [is] associated with ancestor worship," declares Mr. Davis in his Introduction, at pages xii and xvi, without any discussion or apology. But this is not very courteous to Dr. Aston's "Shinto, the Way of the Gods," where the exact contrary is stated at page 36:

> An analysis of a list of "Greater Shrines" prepared in the tenth century yields the following results: Of the gods comprised in it, seventeen are nature deities, one is a sword, which probably represented a nature deity; two or more are more or less legendary deceased Mikados, one is the deified and supposed ancestor of a priestly corporation, one is the ancestor of an empress, and one is a deceased statesman. [Or again at page 177.] None of the *Dii Majores* of the more ancient Shinto are deified men.

In a work like the present, a wrong impression of the nature of Shinto will naturally go far to vitiate the whole treatment; and this is what actually happens. A consultation of the authorities quoted in the preface reveals the author's lack of anything but a superficial acquaintance with their works. The list is supplemented by an imposing bibliography at the close, extending to five pages. But why are Murdoch and Knox omitted, while the names of trivial writers of mere recent date find a place? Murdoch's "History of Japan," published two years ago, is a profound and thorough study, to which writers like Professor Chamberlain are very willing to acknowledge their indebtedness. Dr. G. W. Knox, who died but a few months ago, gives in "The Development of Religion in Japan" a masterly treatment of the very subjects that Dr. Davis blunders over.

In the Bibliography are found the names of Batchelor and B. H. Chamberlain, with Ainu treatises attached to them. Mr. Davis would have found in these treatises a discussion of the strange fact that Yoshitsune, to whose feats he devotes half-a-dozen pages, is to this day revered as a hero among the aborigines of Northern Japan. It is, indeed, the most interesting fact in Ainu mythology; yet Mr. Davis is silent about it, while devoting considerable space to Japanese gardens, which are not associated with Japanese myth or legend. Many of the stories which he gives, as, for instance, "The Burning of the Three Dwarf Trees," are real tales dealing with personages of interest to students of constitutional history. Moreover, this tale is not well told. The leading character, Tokiyori, was a capable Kamakura *shikken*, or regent, belonging to the noble Hojo family. The province he visited was not "Kodzuki," but Kodzuke, and he was not a "royal wanderer." The *samurai* Sano's second name was certainly not "Genzalmon."

Yet in many respects this handsome volume, with its attractive illustrations—Japanesque rather than Japanese—deserves commendation; and its defects may not be present to the ordinary reader, who may be led by it into a fairy world. But it invites awkward comparison with a masterpiece like "The Tales of Old Japan," which covers much the same ground, but was written by an author who knew his material perfectly, and whose English is impeccable.

Notes

Mr. T. M. Healy's "Stolen Waters: a Page from the Conquest of Ulster," which Longmans have in preparation, is based on unpublished manuscripts, state papers, etc., dealing with the title to two great fisheries in northern Ireland.

Sir Clements Markham's "The Conquest of New Grenada" is announced by E. P. Dutton.

The Putnams are issuing the following Cambridge books: "The Concept of Sin," by F. R. Tennant; "The Epistle of Paul the Apostle to the Romans," edited with introduction and notes by R. St. John Parry; "The Second Epistle General of Peter and the General Epistle of Jude," edited with introduction and notes by Montague Rhodes James, and "Light on the Gospel from an Ancient Poet," by Edwin A. Abbott.

The Hawthorne Memorial Association has been incorporated for the purpose, in the words of its charter, "of the erection or establishment and maintenance of a memorial to Nathaniel Hawthorne in the city of Salem, Mass." In Salem, on Union Street, is the house in which Hawthorne was born. On Derby Street is the old Custom House, in which he acted as surveyor. On Mall Street, off the Common, is the house in which he wrote "The Scarlet Letter," etc. The city has quite enough associations with him to warrant a general interest in the memorial which is proposed. The Association has selected as its artists Bela L. Pratt, sculptor, and R. Clipston Sturgis, architect. The expense of the memorial is not to exceed $50,000. Those interested may get full information from Harlan P. Kelsey, secretary, Salem, Mass., and contributions should be made out to the Hawthorne Memorial Association, addressed to Mr. Kelsey.

We read in the *Cambridge Review:*

> After quite a little flutter of verse-loving fly-sheets, the changes in the Classical Tripos were carried in the Senate on Saturday by 55 to 44; and in 1915 and thereafter candidates will not necessarily lose anything if they do not offer Greek or Latin verse.

The economic evolution of Lorraine is the subject of most general interest treated in the *Annales de Géographie* for November. The industrial conditions at the time of the Franco-Prussian war are compared with those of the present day, showing a remarkable progress in these forty-two years, "through persevering work and methodic organization." On the other hand, in an article on Spanish emigration it is shown that "almost the whole of Spain is being drained of its peasantry, a grave economic condition [*malaise*] due largely to bad land ownership, heavy taxes, and the irregular climate." The other contents are geologic studies of the North Atlantic and English Channel sea-bottom, and the structure of the Titteri, one of the ranges of the Atlas Mountains.

The frontier region of Turkey and Servia is sketched by Major O. Kreutzbruck v. Lilienfels in the military department of *Petermann's Mitteilungen* for November. The four principal routes which invading armies would take are described in detail, and there is an admirable map, in which is shown the location of the various fortifications. Among the other subjects treated is the temperature of the earth in its relation to the development of vegetation.

In our recent notice of Miss Helen Nicolay's "Personal Traits of Abraham Lincoln," reference was made to her opinion that not more than a hundred of the stories attributed to Lincoln were probably genuine. Mr. Anthony Gross, in "Lincoln's Own Stories" (Harper), has brought together about three times that number. While the collection includes anecdotes about Lincoln, as well as stories by him, and while such inclusions as the Union letter to Greeley and the Gettysburg Address are foreign to either category, the reader who likes to begin anywhere and stop at any time will probably find the volume both entertaining and instructive.

"Joseph Pennell's Pictures of the Panama Canal" (Lippincott) consist of a series of lithographs made by Mr. Pennell in the early months of this year, together with paragraphs of explanatory text. The spirit of the work is aptly conveyed by a sentence or two from the paragraph accompanying the picture of The Guard Gate, Gatun:

> The scale, the immensity of the whole may be judged by the size of the engines and figures. I have never seen such a magnificent arrangement of line, light, and mass, and yet those were the last things the engineers thought of. But great work is great art, and always was and will be. This is the Wonder of Work.

Mr. Pennell's book is indeed an extraordinary record of this Wonder of Work, much of which will be concealed when the canal is completed and filled with water.

Grace G. Montgomery has adopted a novel and very practical method, that of question and answer, in her "Auction Bridge in Ten Lessons" (Scribner). The salient features in her directions for playing the game do not differ materially from those given in other handbooks on the subject, and the chief value of the present volume is in its compression and convenient size, and in its clear arrangement. It should be of considerable assistance, both to beginners and to players of moderate skill who wish to improve their game.

Jeannette Marks has herself felt the spell of Wales, and endeavors in "Gallant Little Wales" (Houghton) to communicate her emotions to others. This little volume is conscientiously written, and in parts instructive, yet somehow it seems to miss just the impression which the author evidently wished to convey. There are many irritating repetitions and some anecdotes of personal experiences which, however thrilling to the subject of them, fail to intrigue the general reader, and there is a chapter devoted to Dr. Johnson's tour of North Wales which is rather perfunctory and quite unprofitable. On the other hand, the author is able to reflect a little of the spirit which animates the Eisteddfod, and in the chapter on Hill Top Churches she skirts a field which might repay fuller exploration. Perhaps it is the inevitable comparison with the absorbing Borrow, perhaps the recollection of treasured emotions of one's own, evoked by adventures in this romantic corner of Britain: whatever it be, the present volume somehow fails to set the pulse of enthusiasm beating.

Dr. J. Franklin Jameson has edited, with an appreciative biographical introduction, the late Gertrude S. Kimball's "Providence in Colonial Times" (Houghton Mifflin). The volume is only a section of an intended larger work, but the part now published, with the exception of a fragmentary final chapter on old Providence houses, was left in a completed state at the author's premature death in 1910. Few students knew more intimately than did Miss Kimball the early history of Providence and Rhode Island; while at the same time her previous publications, notably the "Correspondence of the Colonial Governors of Rhode Island" (1902-1903) and the "Correspondence of William Pitt" with colonial officials (1906), kept before her a clear view of the wider historical relations of the period. As a consequence the present work, while exhibiting an easy familiarity with local and personal details, rarely loses sight of the general historical background, and entitles the book to a high place in the scanty list of first-rate local histories. The checkered career of Roger Williams has nowhere been traced with a better mixture of sympathy and impartiality than in Miss Kimball's first three chapters; and the chapter on the early shipping trade of Providence, foreshadowed in part by the author's earlier paper on the East India trade of the town from 1787 to 1807, published in 1896, is a solid contribution. The forty-seven full-page illustrations are intelligently chosen and notably well executed.

The Lost Cause and causes that are hanging in the balance are brought into juxtaposition in the little volume of Roger A. Pryor's "Essays and Addresses" (Neale). The book opens with the author's speech on the independence of the South, delivered in the House of Representatives after the election of Lincoln; it closes with his argument in the case of the People of New York vs. the North River Sugar Refining Company, described as the first effort in any court in the land to break up a Trust. This was in 1890, but previous to the passage of the Sherman act, and the effort was successful. Between the two dates Pryor was a member of the first Confederate Congress, and, ultimately, a Justice of the Supreme Court of New York. His style has the old-fashioned leisureliness, and the two addresses mentioned are the only ones of much interest. The book needs a few notes, particularly on the first speech, and more dates.

"New Trails in Mexico: An account of one year's exploration in Northwestern Senora, Mex., and southwestern Arizona, 1909-1910" (Scribner), by Carl Lumholtz, is not on the whole as interesting as the author's previous work, entitled "Unknown Mexico," which was published in 1902. The latter contained the record of five years' exploration and embraced territory more than five times the size of that which he now deals with. The method of treatment is much the same in both books. Perhaps the most valuable contributions in the present volume are the maps which cover an area hitherto little known, that of the extreme northwestern corner of Mexico. The romantic early history of this country together with that now included in the present State of Arizona is only slightly touched upon. "Original documents," the author writes in his Preface, "relating to the history of this region, are not always of easy access, and I have not had an opportunity of consulting them." The valuable collections of the Hispanic Society in New York seem to have been overlooked in this connection. This is one of many instances where a library, and especially this wonderful collection of Mr. Huntington's, is not without honor in its own city. Mr. Lumholtz's work is evidently a transcription directly from the notebook with little rearrangement of material, a fact which will often make it difficult for the specialist to separate from the mass of rather prolix description the material he is seeking, although a good index is furnished. It is to be regretted that the interesting flora and fauna were not considered by themselves with greater detail and accuracy, perhaps in appendices as has been done with the geology of the country. To the general reader the book should prove entertaining in its description of travel in an ill-watered country which is virtually unknown.

Mrs. John King van Rensselaer has written a book of 392 pages on "Prophetical, Educational, and Playing Cards" (Jacobs), with a few chapters on chess and fortune-telling. The interest in Mrs. van Rensselaer's book lies in her attempt to establish a relation between cards and the ancient mysteries of Toth-Hermes-Trismegistus. Ever since Ménestrier, in 1704, looking through the accounts of King Charles VI, discovered that in 1392 the Royal Treasurer had paid Jacquenin Gringonneur "58 sols Parisis pour trois jeux de cartes à or et diverses couleurs de plusieurs devises," the problem of the origin of cards has been a most intricate subject. Ménestrier himself believed that they had been invented in France. Heinecken, in 1771, and the Abbé Rive, in 1781, tried to prove Germany and Spain, respectively, as the original home of all cards. Then, in 1779 (and not in "about 1785," as we find on page 216 of Mrs. van Rensselaer's book), appeared a curious work by a certain Court de Gebelin, which devoted a chapter to cards. De Gebelin, who wrote one of those general histories much in vogue in the eighteenth century, but since forgotten, tried to prove that cards were nothing but the allegorical figures which represented the Book of Wisdom of the ancient Egyptians. He was not taken very seriously. The most valuable contribution appeared, however, in 1784. Johann Gottlob Brietkopf, one of the founders of the famous music-printing house of Leipzig, in his "Versuch, den Ursprung der Spielkarten, die Einführung des Leinenpapiers, und den Anfang der Holzschneidekunst in Europa zu erforschen," declared that cards were of Eastern, probably Indian, origin, and had been imported into Europe at the time of the Crusades via the Saracens, Sicily, and Central Italy. The further investigations of D'Ambly, Chatto, Lacroix, and Cicognara, but most especially those of Leber (1842) in the Archives of Viterbo, have all supported Breitkopf. Cards—playing cards as well as divining cards, which were adopted for their purposes by magicians and palmists as soon as the printing press and the wood cut brought them within reach of all—according to the best knowledge upon the subject, were first used in Northern India, and were, like the now forgotten four-handed chess, a war-game for the higher classes, gradually adopted by the mass of the people.

Cards, like cooking books and children's picture-books, are very easily destroyed. Only a few old packs are left to us. Their study is a difficult one, and full of pitfalls. It seems to us that Mrs. van Rensselaer has investigated the subject in a most haphazard way. She accepts the theory of De Gebelin without anything more, and buries it under a mass of ill-assorted and heterogeneous information. She adds a quantity of Assyrian-Babylonian-Hebrew-Greek-and-Egyptian occultism. We have read through the book with great care. We find, however, that to refute every single statement made by Mrs.

van Rensselaer would take a work of at least 600 pages. We can only hope that the controversial interest which her book may call forth will induce a more careful investigator to give us a readable and understandable volume on this fascinating subject.

The Missouri Historical Society of St. Louis has just published a translation of Dr. F. A. Wislizenus's "A Journey to the Rocky Moutains in the Year 1839." The author was one of those inhabitants of Germany who were driven by the authorities to our shores, on account of participation in revolutionary movements. In 1836 he established himself in St. Clair County, in Illinois, in a settlement of German refugees like himself, who, because of their superior education, were styled "Die Lateiner." The young German doctor was not satisfied by the quiet life, being seized, as he writes, by an "irresistible impulse for wandering," and at length made the journey to the Rocky Mountains. This he described in a little volume, now excessively scarce, which was published in St. Louis in 1840. The story of his adventures is told in a simple, straightforward way, which creates in the reader a feeling of confidence in his observations. The book is well printed, and is a great credit to the Society.

The Macmillan Company has issued a reprint of the autobiography of Bishop Henry B. Whipple of Minnesota, "Lights and Shadows of a Long Episcopate," which was first published in 1899. It is the story of one of the greatest and noblest American friends of the Indian, a man of unique and fascinating personality, whose more than forty years as Bishop of Minnesota form a most creditable chapter in the history of American religious effort. The narrative of his experiences is full of interest.

The *Nation* of April 25 called attention to Monsignor Ward's excellent history of the activities of the Roman Catholics in England in the early nineteenth century. The author has just published a third and final volume of his "Eve of Catholic Emancipation" (Longmans), covering the decade 1820 to 1830. At the beginning of this decade the Catholic Church in England was a house divided against itself—divided by personal antagonisms and political differences. Little progress had been made towards political emancipation. What had been done had been done mostly by Catholics in England. But in 1823 Daniel O'Connell came forward in Ireland, and by his Catholic Association began to give unity to the political movement. He also began to transfer the main source of Catholic political agitation from England to Ireland, where it has ever since remained. By the collection of "Catholic Rent," O'Connell's Association formed innumerable local centres for political discussion in Ireland, and in England enabled him to pay the expenses of agents and to influence the newspaper press. The Association became so powerful a factor that within two years the English Government felt that safety demanded its dissolution. By it, however, O'Connell had proved himself a man of originality and power in the eyes both of the English and of the Irish. When he conceived the bold and novel plan of standing for election as member of Parliament from County Clare, in spite of the fact that he could not take the oath required to confirm his seat in Parliament, he was elected, as Monsignor Ward describes, with unbounded enthusiasm, by the priests and by the people. By this act O'Connell forced the crisis which finally led the Government to concede Catholic Emancipation. Besides describing this political struggle, the author gives a good account of the restoration of the English Jesuits, of the payment of the claims for the destruction during the French Revolution of the Catholic property at Douay, and of the other activities of leading English Catholics during the third decade of the nineteenth century.

So long as much foreign philosophical literature of real importance remains untranslated, the appearance of English versions of works of minor consequence cannot be recorded with entirely unalloyed satisfaction. The collection of essays by Émile Boutroux, which F. Rothwell has done into English, under the title "Historical Studies in Philosophy" (Macmillan), was not a book of which the translation can be said to have been imperative. The French original appeared fifteen years ago. Exactly half the volume consists of two reprinted encyclopædia articles—those on Aristotle and Kant, from "La Grande Encyclopédie." Of this circumstance the English publishers, unlike the French, have neglected to make mention. These articles give brief biographies of the philosophers with whom they deal, and fairly clear and skilful *précis* of the philosophers' writings. But, except for a few interesting paragraphs on Aristotle's relation to modern thought, they contain no critical or constructive matter of consequence; and the article on Kant includes rather more than a reasonable number of historical errors. The freshest and most valuable portions of the book are those treating of Socrates and of Jacob Bœhme. The translator has inexplicably omitted from the English version the part of the original having a special interest for English readers—an historical discourse on the influence of Scottish upon French philosophy. The translation has the sole merit of being tolerably idiomatic; with the French tongue and with the terminology of philosophy it betrays no very intimate acquaintance. Elementary blunders are numerous—such as the conversion of the caterpillar (*chenille*) into "a snail"; the translation of *l'encyclopédie philosophique* (used as the name of a philosophical discipline) by "philosophical Encyclopedism"; and of *droit* invariably by "right." The most amusing instance of this last error is the undesigned irony of the sentence: "Kant regards penal right as based, not on utility, but on reward. He defends the death penalty against the sentimentality of Beccaria." Kant did not propose to "abolish learning" in order to "find room for belief"; he merely proposed to set aside the pretension to knowledge (of the supersensible). To say that Kant's "Critique" is *un des monuments de l'esprit humain* is not to say that it is "one of the pillars of human thought." On p. 164 the sense of an entire passage is reversed by the substitution of "impossible" for "possible." The volume is admirably printed, and is furnished with an index, which the French edition lacks.

"Letters of Ulysses S. Grant" (Putnam), edited by Jesse Grant Cramer, is a small collection of letters written by the General to his father and sister between the years 1857 and 1878. Their historical value is very slight. One learns how the secession movement was received in Illinois around Galena; there is a hint of the "pulling and hauling" for appointments in the army at the opening of the war; and something about the carping criticism indulged in by Northern newspapers with respect to military operations. But the letters are mainly concerned with personal and family affairs. Even about the General himself they tell us little that is new. The early letters have something about his experience as a farmer; the later something about his travels. And certainly no one would read these letters for the letters' sake. Gen. Grant was not of those who, like Horace Walpole, write interesting letters even when they have nothing to say. "I have nothing particular to write about," he says rather helplessly. "We are all very well. Julia contemplates visiting St. Charles next Saturday." Yet, give him something tangible, and he writes well enough, with that direct simplicity, that homely phraseology, that precision and economy of words, which, in the Memoirs, won the praise of so fastidious a critic as Matthew Arnold. Here, certainly, the style is the man; and the chief, and almost the only, interest which the letters have, is in revealing that elemental simplicity of mind and heart which made Gen. Grant a great man. He had, in the highest degree, the common man's common sense, his capacity for hitting the mark by instinct without resorting to logical processes of thought. "Whatever may have been my political opinions before, I have but one sentiment now. That is, we have a government, and laws, and a flag, and they must all be sustained." Now, if you boil down all the volumes of argument employed to sustain the Northern position, this is precisely what they come to. This was exactly the position of Lincoln. But what with Lincoln was a reasoned conclusion with Grant was an instinctive sentiment.

Whitelaw Reid, Ambassador from the United States to the Court of St. James's, died at Dorchester House, London, on Sunday. He was born in Xenia, O., in 1837, and in 1856 graduated from Miami University (Oxford, O.). In 1858-9 he edited the Xenia *News*. After experience as legislative correspondent, as war correspondent, and as librarian of the House of Representatives, he became attached, in 1868, to the editorial staff of the New York *Tribune*, of which paper he was editor-in-chief and chief proprietor from 1872 to 1905. In the latter year he was appointed by Mr. Roosevelt Ambassador to England. Previously he had been Minister to France, under President Harrison. Several colleges, including his own, conferred honorary degrees upon him. Princeton, Yale, Cambridge, St. Andrew's, and Manchester gave him the LL.D., and from Oxford he received the D.C.L. Mr. Reid was the author of numerous publications, among them: "After the War, a Southern Tour," "Ohio in the War," "Schools of Journalism," "Some Consequences of the Last Treaty of Paris," "Our New Interests," "Problems of Expansion," and "How America Faced Its Educational Problem."

The death, at the age of seventy-nine, is reported from Cannes, France, of the Rev. Thomas Augustus Jaggar, D.D., a bishop in the Episcopal Church, who in 1908 was appointed bishop in charge of American churches in Europe. He was the author of the "Bohlen Lectures" for 1900, and various essays.

The Rev. John Donnan Countermine, D.D., a Presbyterian minister, whose death, at the age of sixty-two, was reported last week from Philadelphia, was the author of several books, including "The Religious Beliefs of Shakespeare," "Joseph Addison, the Man and Author," and "Daybreak Everywhere."

Another clergyman author who died last week is Henry B. Pratt, aged eighty, a graduate of the Princeton Theological Seminary. At the time of his death he was engaged on a revision of his work on the Spanish Bible for the American Bible Society. Among his other works is "The Buried Nations of the Infant Dead."

Dr. William Hand Browne, writer, and for many years librarian of the Johns Hopkins University, died on Friday in Baltimore. He was born in that city in 1828, and graduated in medicine from the University of Maryland in 1850. Since 1891 he had been professor of English literature in Johns Hopkins. He was the author of "Maryland, the History of a Palatinate," "George Calvert and Cecilius Calvert, Barons Baltimore," and collaborated with Col. R. M. Johnston on the "Life of Alexander H. Stephens." As compiler he is remembered for his "Clarendon Dictionary of the English Language" and "Selections from the Early Scottish Poets." He also translated Von Falke's "Greece and Rome" a other works.

Science

Alpine Studies. By W. A. R. Coolidge, M.A. With sixteen illustrations. New York: Longmans, Green & Co. $2.50 net.

In this book Mr. Coolidge (who is, we believe, of American birth) gives us a number of short essays and sketches, most of them describing excursions in the Alps, some few dealing with questions of Alpine topography and nomenclature. The latter will have a special interest for those who know the author's name as being that of the man who is credited with a larger knowledge than probably any other American or Englishman possesses of the history of Alpine exploration and Alpine geography. His many papers upon these subjects, and the library of books and maps throwing light upon them which he has formed, have given him a well-earned distinction not only in Switzerland, where he has (as we are informed) resided for many years, but among European students generally. The volume, which is illustrated by good photographs of rock and snow scenery, contains twelve chapters describing expeditions in the High Alps, four chapters on the history and nomenclature of the mountain region round Monte Rosa, and four "subalpine" chapters on scenes in the lower parts of Switzerland. Of these three sections, the second has the most novelty, and, accordingly, it is to it that what we have to say of the volume will be chiefly directed.

Mr. Coolidge truly observes that the names of high mountains were generally used vaguely and loosely, not only by early travellers, but also by the people who dwelt near them before the days in which scientific explorers appeared and regular surveys began to be undertaken. This was especially the case with lofty snow summits like those of the Pennine Alps, because the dwellers in the valleys had little to do with them, and because their forms appear quite different as seen in different valleys, especially when the valleys lie on opposite sides of the great watershed dividing the Swiss Valais from Italy. One may, indeed, go so far as to say that the local nomenclature of mountains is minute and accurate only in countries where the inhabitants are, by their daily life, in actual touch with the ridges and peaks, as happens in countries like Scotland, where the herdsman drives his sheep or cattle over the hill pastures. Mr. Coolidge further remarks—and this is also a general truth—that the names of passes are apt to be fixed sooner than the names of peaks, and that there is often a confusion between the name of the pass and that of the peak. A century ago people still talked of Mount St. Bernard or Mount St. Gothard, and the ordinary reader used to suppose that these names denoted peaks, whereas they only expressed the fact that the traveller had to climb a great height to cross the pass.

Starting from these general propositions, he examines with great care and a copious citation of authorities from many writers, from the middle of the sixteenth century (a few even earlier), the origin of the names of the great summits which we now call Monte Rosa and Matterhorn, and of the pass, lying between the Matterhorn on the west and the Breithorn on the east, which we call the Col de St. Théodule. It would take too long to set forth the details of the investigation by which Mr. Coolidge shows that the name Rosa has nothing to do either with any Celtic word for mountain nor with the rosy light which irradiates the snows at morn and evening, but comes from the word *ruez* or *roise* or *röesa*, which is the local name for a glacier. The ultimate etymology he does not attempt to trace, content with showing that this is a word native to the region. Thus just as Kinchinjanga means the "icy mass," so "Rosa" is the "ice." Originally applied to the whole mass of summits and connecting ridges which stretches from the Monte Moro above Macugnaga to Arolla, it has at last been confined to one small group of peaks at the head of Val Sesia, the highest of which is now usually called by the name of Dufour Spitze. The Théodule pass is shown to have been known and used from very early times, certainly as far back as the seventh century A. D., but the older writers speak of it as "the Glacier" (Gletscher), or Mons Sylvius (a name afterwards applied to the Matterhorn), or Mons Cervin, or Mons Matter, and the name St. Théodule does not appear before 1688, though, as there already existed on the top an old wooden statue of the Saint (who is the patron of Valais), the pass was doubtless called after him before that date.

Among the descriptions of mountain excursions which occupy the rest of the volume, climbers will probably read with most interest those relating to the Maritime and Cottian Alps, for these regions are even to-day, when Alpine climbing has been fashionable for nearly sixty years, much less visited than are the Swiss or Tyrolese Alps, where the heights are greater, the glaciers longer, and the accommodation far better. Dauphiné, which has a lofty and striking group of peaks, is even to-day poorly supplied with mountain inns, when compared with the other parts of the great chain.

"The Theory of Evolution," by the Rev. Karl Frank, S. J., with a chapter on "Ant Guests and Termite Guests," by Father Erich Warmann, S. J., has been translated from the German by Charles T. Druery. It will be brought out shortly by Kegan Paul & Co.

"Herbals—Their Origin and Evolution," by Agnes Arber, is a Cambridge manual which the Putnams are bringing out.

Bird-Lore for November-December contains the annual report of the National Association of Audubon Societies for 1912. This includes the reports of the secretary, the eight field agents, and twenty-two State societies. There is also a description, with two photographs, of a killdeer's nest on the rock ballast of a railway just three and one-half feet from the inner rail of the south-bound track. From observations it appeared that the bird would stay on the nest "until an approaching train was about ten feet distant and would then rise" and fly away, returning to the nest as soon as the train had passed.

"A Stitch in Time" (Putnam), prepared by a "graduate nurse" and a "grateful patient," not otherwise named, is a little book of seventy-five pages likely to be useful to intelligent readers in time of trouble. It deals, not with surgical stitching, but with simple procedures in domestic emergencies apparently too trivial to require professional care, or when such help is not readily to be had. There are also many good "receipts" for feeding the sick and some incidental good advice for the sick and the well, notably a rational suggestion on overdoing the cold bath. As to treatment, the directions are generally well suited to the purpose, but there seems to be some slip in the matter of poisoning by strychnine (page 53), where, apparently, the authors had opium in mind. The dose of mustard as an emetic is rather more liberal than we should care to give or take. Many readers will need to have the meaning of a divided dose of calomel explained, and all would find that mere sealing cannot be trusted to stop further digestion in peptonized milk; only cooling or heating will do that.

Drama and Music

The Elizabethan Playhouse and Other Studies. By W. J. Lawrence. Philadelphia: J. B. Lippincott Co. $3.50 net.

In the very active discussion concerning the construction and usages of the Elizabethan stage which has been in progress during the last ten years or so, the author of the present work has taken a prominent part, and students of the drama will welcome this ingathering of his most important contributions to this thorny subject. The first article is the best summary yet published of our information in regard to the stage conditions of the time; the remaining articles deal with special questions, as appears from their titles: "The Situation of the Lords' Room," "Title and Locality Boards on the Pre-Restoration Stage," "Music and Song in the Elizabethan Theatre," etc. The chronological list of Elizabethan playhouses at the end of the first article was printed before the announcement of Professor Feuillerat's discoveries in the Loseley MSS., and accordingly requires correction in regard to Blackfriars, which, under its earliest management, we now know to have been the third in date of the Elizabethan theatres. Fortunately, before the volume was off the press, Professor Feuillerat had published in the *Daily Chronicle* a preliminary communication embracing the main points of his discoveries, so that at the end of his work Mr. Lawrence has been able to give us a discussion of these matters. In this final article we note especially the proof of the occasional employment of multiple setting (in certain dramas of Lyly's) on the Blackfriars stage; also a suggested explanation as to the origin of the puzzling term "private" which came to be applied to that theatre, as to some other Elizabethan theatres. According to this view, Farrant, who was the first to give dramatic performances in the old monastic building of Blackfriars (in 1577), evaded the "Act of Common Council" for the regulation of acting within the city by living himself on the premises and avoiding the collection of money at the theatre itself. By pursuing this course, he could call these performances "private" and so escape the penalties of the above-mentioned act. Hunnis, the next manager, was able to throw off the mask, but the old designation of a "private house" stuck to the place, and was later on applied to still other theatres whose stage conditions and terms of admission were similar. In connection with these Blackfriars matters, one is surprised to find Mr. Lawrence, earlier in the volume, accepting without question Professor Wallace's theory that this theatre in the period of its greatest importance—under the management of Evans—was subsidized by the Queen.

As regards the author's general views concerning the Elizabethan stage, one may say that he is altogether uninfluenced by recent writers who are inclined to claim for Elizabethan staging a larger element of pictorial illusion than was once thought possible, and who in other respects minimize to a certain extent the archaic features of the stage of the period. So far as the public theatres are concerned, we have no doubt that Mr. Lawrence is right. The stage in such theatres was essentially a platform stage and so afforded little opportunity for pictorial effects. To be sure, there was a rear stage, but, as Prof. G. F. Reynolds has justly argued, every consideration of convenience would require that where there were two stages (to say nothing of the third one aloft), the acting should be mainly on the front stage, which fact excludes pictorial illusion as an element of any importance. It seems to us, however, different with the so-called private theatres, from which, and not from the public theatres, the modern theatre is undoubtedly descended. In these cases the stage did not project out into the middle of the audience, and the conditions from the first invited more elaborate furnishings and to a certain degree scenic illusion. Neither Lawrence nor Reynolds appears to consider the possible influence of court performances on the staging of the private theatres, at least. The documents relating to the Office of Revels, published some years ago by Feuillerat, show that the staging in court plays was as elaborate as anything known to our modern Shakespeare "revivals," and hence it is natural that this same French scholar, in his more recent treatise, "Le Bureau des Menus-Plaisirs et la mise en scène à la cour d'Elizabeth" (1910), should ask whether Shakespeare, after having seen one of his plays, *e. g.*, "Love's Labor's Lost," acted in this manner, would not be likely to seek an improvement of his own stage in the same direction, as far as the resources of his company permitted.

Among the conclusions relating to the Elizabethan stage which the author arrives at in this volume, we note the following: That the title of the play of the day was commonly announced on a board set up in sight of the audience, but that boards indicating the locality of the scene were only sparingly used. Indeed, the Elizabethans did not shrink from wholly unlocated scenes. Furthermore, there were normally intervals between acts, though brief; inter-act song, dance, and even music seem confined, however, to the private theatres—only in regard to music were there occasional exceptions. Mr. Lawrence lays stress, moreover, on the multiple or simultaneous setting, which was common on the court stage of Elizabeth's day, as it had been in the Middle Ages. Feuillerat had already recognized this principle, but by neglecting it, R. Warwick Bond, the editor of Lyly, has seriously misrepresented the staging of that writer's plays.

We have only touched on the more important articles in the work before us, but there are a number of others, like that on the mounting of masques in the reign of Charles I, the early history of French players in England, which deserve attention. The volume is beautifully printed, and its value is enhanced by a series of admirable illustrations.

Israel Zangwill's play, "The Next Religion," which was treated with a good deal of deference by the English critics when it was produced in London some months ago, now appears in book form (Macmillan), but is not likely to prove more impressive in print than it did upon the stage. It contains much witty and satirical writing, several effective situations of a dramatic and pathetic kind, some vigorous assaults upon dogmatic theology, but is strangely deficient in the two qualities, clearness of conviction and evident sincerity of purpose, without which a work of this kind can have no substantial value. That it should offer nothing new in the way of argument on one side or the other is not particularly surprising, for the themes chosen for discussion have been debated along almost every imaginable line, but the fact that it might have been written by an agnostic, a Hebrew, or a professing Christian constitutes a serious dramatic and artistic defect.

Mr. Zangwill's hero is a liberal-minded clergyman of the Protestant Episcopal Church—the story, though ingenious, calls for no detailed analysis—who has lost all faith in his professional creed, and even in the possibility of a future existence. Being honest, he refuses to cherish his flock upon fond delusions, resigns his post, and starts out as the prophet of a new religion, based on the facts of science and aiming at the establishment of a heaven upon earth through the agency of brotherly love and universal altruistic endeavor. By the aid of an agnostical millionaire, he is enabled to found a magnificent cathedral, with a sumptuous ritual of his own invention, which attracts crowds. He is encouraged to believe that his most comprehensive ideals are about to be realized, when his only son, whom he had trained to be his successor, is murdered by a crazy fanatic. His stoical faith in his own convictions is proof even against this blow, but his wife, a religious devotee, who has followed his fortunes with self-sacrificing fidelity, rebels when he denies to his dead son the hope of resurrection, and, although he remains steadfast, the play ends upon a note of triumphant evangelical inspiration. In her case, at least—and from first to last she is the theatrical antidote to her husband's chill philosophy—the next religion is a hollow fallacy.

Possibly Mr. Zangwill meant to imply that woman's faith is less intellectual and more emotional than man's, or that superstition is proof against the light of reason, or that the craving after immortality is deeply rooted in human nature. Or, again, he may have wished to demonstrate the superiority of pure reason to all emotional weakness. A fable capable of so many interpretations is of small account in the theatre. Moreover, the play, with all its cleverness and occasional eloquence, is often shallow, tricky, and theatrical, and in places ill-informed. Some of the dogmas ascribed to modern Episcopalianism are utterly fantastic. Mr. Zangwill evidently knows little of the elasticity of the later theology. Even the arguments of his skeptics are sadly old-fashioned. *Ne sutor supra crepidam* is a proverb of which a scholar should be heedful, and even in the heat of argument the skilful disputant will hesitate to wound the religious susceptibilities of his opponent. Some of Mr. Zangwill's utterances may or may not be pertinent, but they are in execrable taste. Such raw crudity defeats its own object.

One of the most flagrant sins recently committed in the way of dramatic adaptation is Porter Emerson Browne's transformation of the "Chains" of Elizabeth Baker, produced in the Criterion Theatre. The original piece attracted much attention in London, as a study of the hopeless condition of millions of the lower middle classes. The hero, clerk to a big corporation, feels that he is doomed to lifelong servitude, without any hope of independence, and longs to emigrate to some newer country where his energies may have wider scope. But his wife, whom he cannot afford to take with him, and all her relatives oppose his desire bitterly. Finally he decides to get away secretly, but he learns that his wife will soon be a mother, and he, therefore, abandons all idea of escape and resigns himself to a life-time of dreary routine. These domestic and social responsibilities are the chains, according to Miss Baker, which bind men to slavery. Mr. Browne's comedy, purporting to be founded upon Miss Baker's, is a clumsy travesty of it, with an inverted moral. The conversion of the characters into Americans, with a corresponding change of scene, inevitably plays havoc with the quality and design of a piece dealing exclusively with British conditions, but the climax of Mr. Browne's artistic offence is that, for the sake of a happy ending, he has made nonsense of the whole, by making the impending birth the beginning of a new era of happiness, instead of—as the author intended—a crowning calamity. Moreover, he has vulgarized a serious work by much trite and foolish humor. The philosophy of Miss Baker's play is not, perhaps, impregnable, but that is no reason why it should be exposed to such utter misrepresentation.

Next season Mabel Taliaferro and her sister, Edith Taliaferro, will be joint stars under the management of Joseph Brooks. They will be seen early in September in New York in a drama now being written for them.

According to a statistician, there have been since 1875 no fewer than 171 women composers in the larger forms. The number of women who compose songs and piano pieces is not given.

The number of pianos imported last year into the United Kingdom was 18,508, valued at $2,733,712. A preponderant proportion of these were imported from Germany, the German piano being very popular and entering into successful competition with those made in England. Comparatively few of this number were products of the United States. It is said that to produce these 18,508 pianos in England would have required the labor of 3,000 workmen in twenty factories, working on full time, with wages at $9.73 per week, a total of $1,459,950 for labor.

At the conclusion of the London Philharmonic Society's last concert, in the course of which Mr. Harold Bauer played the solo part of Beethoven's concerto in G major and subsequently Brahms's "Walzer" (op. 39), the artist was presented, at a gathering of the members of the Society, with the Beethoven gold medal. Mr. J. C. Ames made the presentation on behalf of the committee, and Mr. Bauer, in returning thanks, told how deeply he was moved by having attained the ambition of his boyhood. The only other living pianists upon whom the distinction has been conferred are Paderewski and Sauer.

It is rumored that Sir Hubert Parry has been contemplating the foundation of a chamber-music club, at which members will be assured of finding the ingredients of a trio or a quartet.

The orchestral parts in Richard Strauss's operas are reckoned the most difficult ever written. To make them conveniently accessible to students who want to improve their technique, the Berlin publisher, Adolph Fürstner, has printed the parts in separate volumes at three marks each, so that every violinist, 'cellist, flute, or clarinet player, trumpeter, and so on, may have what concerns him. Even the kettledrum, glockenspiel, and xylophone players have a volume all to themselves.

Teresa Carreño continues to arouse enthusiasm by her playing in various European countries, and she nearly always puts on her programme a piece by her pupil, Edward MacDowell.

Madrid seems to be kind to musicians, foreign as well as domestic. The pianist, Edouard Risler, for example, is giving no fewer than eight recitals there this season, while the famous Rosen Quartet will give six concerts next February, at which all of Beethoven's quartets will be played. The Madrid Orchestra is a popular institution, and it is said that when it plays at San Sebastian in summer the gambling rooms are always emptied during the concert hours. The conductor of this orchestra has decided to take it for a visit to Paris.

Art

NATIONAL ACADEMY OF DESIGN.

The opening of the Winter Exhibition of the National Academy in the same week in which the long-heralded Scandinavian pictures were exhibited suggests comparison. If nothing more, it brings up in passing the old question concerning the verity of the art of our countrymen as a national product.

A radical readjustment of the artistic point of view is necessary in order to take pleasure in both the Scandinavian Exhibition, dominated as it is by new and restricting conventions, and the National Academy, where that phase of art which makes for serenity and charm and adheres to the beauty of line and surface is still much in evidence. The Academy is not rife with restless experimentation just now, but a positive answer to the question as to the American quality of American art comes clear and unmistakable in many different notes.

An obvious indication of this national spirit is manifest in the growing attention bestowed on the interpretation of Western scenery; but, in truth, larger indications of the same spirit are not wanting. The very atmosphere of the landscapes in general—thin, bright, and clear—and their strongly decorative character expressed through this rarefied atmospheric medium, are of this country as of no other. And in the figures—particularly the portraits, of course—the national types are marked.

In this latest Academy Exhibition, as in almost all miscellaneous collections, even the wayfarer may distinguish, without need of catalogue confirmation, the work of well-known artists. John W. Alexander's contribution is thus readily discovered. It is called A Meadow Flower, and is the portrait of a young girl, painted with a subtly woven color harmony of great delicacy and beauty. Another easily recognizable picture is William Chase's gorgeous still life, impeccable in its glitter of fish scales, its splendidly placed lobster, and dark, rich gleam of copper. It is not so easy to attribute to him, off-hand, the ponderous elegance and faultless technique of the portrait with which he has won the Proctor prize, but once the fact is known, it seems inevitable that he should have painted the picture. Colin Campbell Cooper does not disguise his style by shifting from aspiring cathedrals and skyscrapers, enveloped in smoke and steam, to the low, broad arches and strong horizontal lines of the Ponte Vecchio, with the soft romantic richness of an Italian sky. It is a joy to see again Wilton Lockwood's Peonies, delicately pink and white and perfect.

E. Irving Couse's Indians are easy to recognize when once their acquaintance is made. It is a happy thought thus to give us pictorial reminders of the better aspects of a weakened and fast-vanishing race. But the Indians of Mr. Couse's pictures are so archæologically correct, so well-placed for the best effect on the canvas, that one may be pardoned a backward thought of Sir Frederick Leighton's immaculate and impressive forms and compositions. This is not to deny warmth and life to Mr. Couse's figures. Gardner Symons's identity with his picture is more difficult to guess. The Bridge and Winter Sunshine might be Symons's or it might be Redfield's, but the sunshine is wonderful, the icy stream and violet snow shadows remarkable, and the carrying quality unexcelled in the Exhibition. It is a sort of *tour de force* in technique, and interesting as such.

Across the room John Carlson's Gray Woods gives a quieter, more restful aspect of the snow crossed by the brown trunks and bare branches of the forest trees. It speaks rather of nature than of the vision of the artist, though the latter is unaggressively there. Two other landscapes, not far away, by William Wendt and Daniel Garber, are noticeable for the poetry of the painter's interpretation of nature, with their dark green pattern of trees in the foreground, the golden middle distance, and the water that, in its reflections, makes the sky justly an integral part of the picture. On the line above Mr. Garber's landscape is a quiet little interior by Louis Berneker, reminiscent of Dewing, if you like, but with much charm and faithful rendering in tone and composition.

There are a number of pictures that are interesting as types of girlhood as well as for the artist's methods.

Joseph Trotta's Tessie and Alvira have something sensitive and unusual in the cast of countenance, something Venetian in the warmly harmonious color, and something quite the artist's own in the simple, certain, and adequate modelling.

Helen Turner's Pauline is a sturdy American type of girl, painted with intelligent simplification and arrangement that make a pleasing and effective decorative composition. The vertical lines of the pose, the dress trimming, and the bird-cage wires, the subdued figures giving a note of color to the background, leading up to the more intense color of the birds in the cage, all serve to make a setting of distinction for Pauline's vivid gypsy-like beauty.

Charles W. Hawthorne's The Rose recalls the great days of English portraiture, in the color composition and in the character of the face, not to mention the artist's methods with his paint, which put him always with the masters of his craft.

In the Girl in Green, M. Jean McLane has successfully achieved a difficult shadow effect and an English feeling of out-of-doors. Hubbell's English pre-Raphaelite children ought to awaken keener interest than they do, for there is good work in them, and the same thing is true, in a different way, of Barse's pink girl called Youth, and of John Johansen's Village Rider. They do not justify their size.

Frieseke's picture called Youth gives evidence of much skill in painting, in a high key, the whites of drapery and flesh, but the rococo effect of twisted lines and many unrelated things mars, with a feeling of unrest, the pleasure it should give.

Blumenschein, in the picture that takes the Isador prize for figure composition, has given an original, decidedly American yet classically dignified rendering of the subject, Three Ages of Man, which he calls, however, Wise Man, Warrior, and Youth.

Annie Traquair Lang's Gray Kimono is extremely well painted as to textures, flesh, and tone. The interest of the picture is heightened by the American type of woman—nervous and anxious—that wears the Japanese garb.

In Marines, Paul Dougherty has outrivalled himself in his granite shore and quiet water that speaks the calm before the storm.

Henry Snell and Frederick Waugh have delicate color effects of water in contrast with the chalk cliffs of England, and the flat wave-worn rocks of the Maine coast. John Benson expresses the resistless power of the waves and William Ritschel their softer aspects on the Monterey coast.

In the many landscapes there is great cleverness; much technical knowledge is displayed and usually a definitely decorative design is apparent. Sometimes this is attained by taking nature as the artist finds it, sometimes by selection and arrangement, and by one or another of these means many moods and phases of feeling are vividly intensified for the ordinary observer. In spite of the disadvantage of crowded walls, and the many impressions that succeed one another too rapidly for real æsthetic pleasure, the excellence and variety of the landscape part of the Exhibition are very noticeable. Leonard Ochtman and Charles Rosen have delicate tones with feeling for nature's quiet moods of Spring and Winter. Ernest Lawson's Palisades is full of the poetry of evening. Charles Eaton Warren's Among the Dunes gives a gray day's dreariness with interest. Granville-Smith's The Old Stone Bridge shows color organization and unity. A little timidity in handling does not keep the picture from having much merit. De Witt Parshall's Abyss of Shadows gives the ghostly rock formations of the mighty Canyon of the Colorado with the shadows of night around them. He expresses by a suggestive glimpse more successfully than most, something of the awe which that restless, illusive depth inspires in the mind of man.

L. E. S.

To the attractive "Little Books on Art," published by McClurg, are added "Benvenuto Cellini," by Robert H. Hobart Cust, and "Rodin," by Muriel Ciolkowska. Both are illustrated. Mr. Cust's task reduces itself to the obvious and not quite grateful one of condensing the incomparable autobiography. This version may be useful to those who are unable to bear the moral shock of reading the original. Otherwise its utility is not apparent. The book on Rodin is written in a spirit of unqualified adoration, is clear and fairly complete—an excellent short cut to the voluminous writing that gathers about the master of Meudon. It was perhaps hardly to be expected that an enthusiast should admit or even perceive the serious falling off in Rodin's work in recent years. It still remains for criticism fairly to estimate this great and baffling personality in whom supreme sanity and soundest workmanship often lapse into the merely capricious or positively morbid. Posterity may well date this decadence from the Balzac. Unquestionably a work of genius, it represents genius that has strangely lost its bearings. This is an informing and well constructed little book.

Reynolds, Gainsborough, Romney, Turner, Constable, Landseer, and Watts are the themes of F. J. Rowbotham's "Story Lives of Our Great Artists" (Stokes). Here is a fluent and sufficiently agreeable compilation of an anecdotal sort. Why Landseer is in and Hogarth, surely the greatest of British artists, out, does not appear. It is a book for such as must take their art plentifully sugar-coated with obvious human interest.

"The Colonial Homes of Philadelphia and its Neighborhood" (Lippincott), by Harold Donaldson Eberlein and Horace Mather Lippincott, will naturally appeal most strongly to Philadelphians, but the general reader, too, will find it a book of great charm. The sketches are arranged geographically without any special effort to carry a connecting thread of narrative, or, to apply the remark of a Quaker, "They begin with Front Street and end with Laurel Hill, as all good Philadelphians should." In Colonial days the built-up portion of the city extended no further west than Seventh Street, and it is in this small section one must look for the city houses dating from that period. In view of the many years this region has been deserted by fashion and given over to offices, it is remarkable how many charming Colonial homes have remained. But they are gradually being cut into, and in a few years they will have disappeared. The old Cadwallader house, at Fourth and Locust Streets, has been purchased by an insurance company, in the few brief months since the authors have completed their work. Their book will soon therefore be most valuable as a record. The revival of Colonial architecture will give it special interest to many, as the views, particularly the interiors, represent the purest and best types.

Equally truthful are the descriptions of the social life in old Philadelphia in Revolutionary times. Dining in those days was a formidable function in Philadelphia. Three o'clock in the afternoon was the usual hour selected, and the list of viands might well account for the considerable prevalence of the gout among present-day descendants. Here is an entry from the diary of John Adams, made while he was stopping in that city: "Sept. 8th—Dined at Mr. Powel's . . . a most sinful feast again! Everything which could delight the eye or allure the taste." Philadelphia was a solid, peace-loving, feast-loving Quaker society. If the city life lacked something of the spirituality and idealism of the Colonial New England cities, the country life, which grew up on the banks of the rivers and creeks near by, had a charm peculiarly its own. Even the Hudson could scarcely excel the charm of the Schuylkill, lined from Bartram's Garden to Laurel Hill with delightful country seats. Nor were these merely stately homes. Almost without exception they housed men famous in the life of the nation. Such names as John Bartram, Judge Peters, Benedict Arnold, and John Penn (the poet) have a truly national importance. Nearly all of these Colonial seats have been purchased by the city and preserved with utmost fidelity to the past. The writers' style is admirably adapted to their theme, but it is perhaps to be regretted that they impaired the continuity of their narrative by the genealogical information scattered through the text, which adds nothing to the value of the book for the general public. There were many picturesque characters in those days, and amusing anecdotes could have been introduced in its stead.

Mary Elizabeth Tillinghast, artist in stained glass and designer of many well-known windows, died on Sunday. Miss Tillinghast was born in New York and studied art in Paris under Carolus Duran and Henner. Since 1882 she had been an artist in stained glass, and at one time was associated with John La Farge. She received a gold medal at the Chicago Exposition in 1893. Among her most important works are a stained-glass portrait of Mrs. James Brown Potter as Charlotte Corday; the Gould window, presented by Mrs. Russell Sage to the Home for Friendless Children in honor of the work of Miss Helen Gould; the Hutton window in Grace Church; the Revocation of the Edict of Nantes, in the New York Historical Society's building; an astronomical and classical window, Urania, in the new Allegheny Observatory, and mural decorations in the café of the Hotel Savoy.

Finance

THE "MONEY TRUST."

The declining prices and the atmosphere of despondency, which for a fortnight past have prevailed on both home and foreign stock exchanges, are primarily to be ascribed to the prevalent world-wide money stringency. It might perhaps be doubted whether Wall Street and Europe would accept that explanation as complete. They would point to the Balkan dispute, the Supreme Court's Southern Pacific decision, the coming tariff readjustment. But the point to observe is, that even such incidents as these are judged very largely in the light of the stock market's actual condition, and a market's condition is bound to be in the main unfavorable when money is hard to borrow.

Just now, all the European banks are guarding their reserves with a view to the large external demand for gold—a consequence both of the recent war disturbance and of the prosperous trade throughout the world. Our own market, straitened by the demands of the prosperous interior at this month's climax of trade activity, cannot resort to Europe for relief. This hampers the interests, large and small, which buy stocks on the market, but it does not restrain the sellers. That very largely explains the violence of the recent declines, on news which, in a normal money market, would have been taken with equanimity.

On such occasions, something always happens to give special ground for a market's apprehensions and misgivings, and in the present instance, quite apart from Balkan disputes and Supreme Court decisions, it is undeniable that the financial atmosphere, so far as regards Wall Street itself, has been further obscured by the proceedings in the "Money Trust" investigation.

It must frankly be admitted that at least a part of such apprehension as may actually have existed over that inquiry was due to the fact that some unpleasant truths were publicly brought out this week. Wall Street itself has certainly not been unobservant of the tendency in the matter of progressive consolidation of banking resources in this city. That movement, in a sense, stood by itself. But Wall Street has also chafed under the programme of stock-market manipulation on a prodigious scale, conducted with utter disregard of all ulterior consequences except the manipulators' personal winnings. It has seen even the Bank of England publicly oppose the indirect placing of English capital at the service of such undertakings. It has indulged in a good deal of angry muttering, when some of the most offensively notorious of these manipulations were known to have been conducted by an individual placed in an office of high trust and responsibility in the banking and credit field.

These considerations were so well known that most of the Washington testimony was to Wall Street nothing more than a thrice-told tale. Sooner or later, every serious-minded man knew that there must be a reform which would at least abate the worst of these financial abuses. But the particular uneasiness with which this week's public evidence was received arose from the circumstances under which it was this time told.

It was elicited when the public mind had been so inflamed, by a long series of sweeping and irresponsible declamations in the yellow newspapers and the cheap magazines, that the people at large had seemingly become unable to distinguish between real evils which can be and ought to be abated, and imaginary dangers which do not exist, and for which there is therefore no cure. The outgivings of the La Follettes, the Lindberghs, and the Henrys, on their conceptions of the "Money Trust," have been so wildly extravagant that the simplest and plainest incidents of finance, wholly isolated in character from the abuses above referred to, have been instantly ascribed to gigantic conspiracy.

A policy of very doubtful wisdom for imposing compulsory charges on collection of out-of-town checks; the practice of disciplining ill-managed banks through clearing-house supervision; the exercise of necessary powers by the Stock Exchange in refusing quotations to securities; the use of Government deposits to relieve a highly dangerous money crisis on the stock market as well as in the general field of credit—all of these things, which were perfectly ordinary incidents of banking, were imputed to unprincipled and wicked motives. Unhappily, the nature of the committee's earlier cross-examinations was such as to add its own constant insinuation to that effect. All these occurrences were made to bear the mark of the Beast, precisely as, in last spring's Congressional debates, the fall in cotton and the rise in wheat were the work of the malign Money Trust, and precisely as, in the Populist party's day of the early nineties, the Money Power was declared to be supporting the gold standard of currency merely to enslave the world.

The general result of this investigation, therefore, is a mixed bundle of inferences, many true and many entirely fallacious, which hardly fit either committee or Congress or the public to approach the general question properly to-day. Yet, of all problems in the world, the problem of dealing with the banking, credit, and Stock Exchange machinery of the nation is the most delicate, and calls for the largest experience and practical wisdom, if we are not to walk the path of futility and blunder. This being so, it is fortunate that the political situation, in the last weeks of an expiring Congress, is such that no one expects a serious effort to take the matter up now for legislation.

COOLEY'S

Principles of Science

By WILLIAM FORBES COOLEY, Instructor in Philosophy in Columbia University. *v*+245 *pp.* 12*mo.* $1.25.

This textbook for college courses in introduction to philosophy has grown out of the second half-year's work in the course at Columbia, the first semester of which is devoted to logic. It should appeal especially to scientific students. It carries on the student's study of logic and, assuming only such knowledge of science in general as he may properly be expected to have, it directs his inquiry along the lines of the principles of science to the fundamental problems of philosophy. The opening discussion of the basic intellectual methods of science is fresh and illuminating.

The value of the book as a class text is greatly increased by the provision of a number of exercises at the end of each chapter, devised to stimulate originality in the student by application of the principles just discussed.

DE ORBE NOVO

THE EIGHT DECADES OF PETER MARTYR D'ANGHIERA

Translated from the Latin with Notes and Introduction by **Francis Agustus MacNutt**, Author of "Bartholomew de las Cases," "Fernando Cortes and the Conquest of Mexico," etc.

Letterpress Edition. Limited to 350 *numbered sets.* 2 *vols. 8vo. Illustrated.* $12.50 *net; carriage* 50 *cents.*

A typical Italian of the most brilliant period of the Renaissance, Peter Martyr was a learned, classical scholar, an acute observer and philosophical commentator, and an accomplished courtier. Mr. MacNutt has ably rendered the original text into fluent and readable English. Briefly, graphically, and impressively he introduces to us the man behind the author.

JUST PUBLISHED
HISTORY OF MODERN ELEMENTARY EDUCATION
By **Samuel Chester Parker**, Dean of the College of Education, The University of Chicago.
8vo, cloth, xxiv+505 pages, illustrated.
$1.50

This carefully prepared "History of Modern Elementary Education" deals primarily with institutional development. It emphasizes typical movements, institutions and individuals, thus showing the student elementary school problems from the Middle Ages to the present time.

Enough material for one hundred hours of class work is provided in this book. If a longer course is desired, the text may be supplemented with Rousseau's "Emile," Pestalozzi's "Leonard and Gertrude," and Spencer's "Education."

The publishers present this book with the firm belief that it is the best one that has yet been written for the student of education and the prospective teacher.

The Nation

NEW YORK, THURSDAY, DECEMBER 26, 1912.

The Week

The message which President Taft had such difficulty in getting to Congress last week contained one important section which was printed in full only in the *Congressional Record.* This contained the recommendation that the law should be changed so as to allow members of the Cabinet to have seats, though not votes, in both Senate and House. The President gives succinctly the arguments in favor of the proposal. It should lessen misunderstandings between the executive and legislative branches of the Government, by bringing them into contact. Time would be saved, through direct question and answer on the floor of Congress, which is now wasted in roundabout inquiry. Moreover, a Secretary who knew that he might any day be called upon in Congress for information concerning his Department would be prompted thereby to new zeal in keeping informed on all that went on in it. President Taft does not mention another consideration, though it is really weighty. We mean the heightened interest which the public would be certain to take in Congressional proceedings, when the Cabinet had a voice in them, to answer questions or defend policies. It is obvious also that this would be a means of getting quickly before the country a great deal of information which now comes to the light but slowly and in fragments.

There is no need to exaggerate the evils of the present arrangement. The case is not so black as it is often painted. Those who hold that every government has in its machinery something roughly equivalent to the devices to be found elsewhere could justify themselves by pointing to many ways in which our Cabinet does, in fact, get its views before Congress. There seems, nevertheless, to be a growing belief that the experiment now definitely proposed by Mr. Taft is one of which we are bound, sooner or later, to make trial. It is well-nigh the universal practice in other countries. It has long been urged here, from the time of Judge Story down. It is safe to say that every solid objection that could now be made has been anticipated in previous discussions. If it be said, for example, that Cabinet officers would fritter away their time and bore themselves to death by constantly attending the sessions of Congress, the answer is that nothing of the kind is contemplated. There would be stated times for the appearance of the Secretaries. Something like the English "question hour" would be established. Moreover, the more important questions would be answered only after notice given. All these things are matters of detail which could easily be provided for if once Congress were minded to undertake the central change.

President Taft's appointments to the new Commission on Industrial Relations will not, as a whole, give much satisfaction to those who had hoped that out of the investigations of this joint body of capitalists and workingmen there might come data and recommendations of value. Several names stand out, of course, as eminently fit—like those of Adolph Lewisohn, Frederick A. Delano, and F. C. Schwedtman, representing capital. On the side of labor Mr. Taft has selected Austin B. Garretson, the head of the Railway Conductors, a worthy choice. But the other two are leaders of the American Federation of Labor, now under such a cloud because of the McNamara revelations. Thus there is not a single representative of the great bulk of American labor—the millions who are not in unions, and many of whom could not be persuaded to enter unions under any consideration. Again, there are six millions of women engaged in gainful occupations, and Mr. Taft has not thought it worth while to appoint a single woman to represent this vast army of workers. Finally, it is noteworthy that not a single teacher of economics appears upon the Commission.

Gov. Bass is another of the weak-kneed who have returned from Armageddon with a disposition to make "deals" and to "dicker" with the enemy. The Progressives hold the balance of power in the New Hampshire Legislature. Yet the Governor says: "I want to see the New Hampshire Progressives stand by men who have demonstrated their belief in progress by their votes in the Legislature and other public acts. We can fritter away our work of years by refusing to lend a helping hand to a Progressive outside our own party, or standing idly by and seeing some standpat Democrat or Republican carry off the honors." He even declares that if the Progressives follow such a policy they will not deserve success in the future. "We have the balance of power in the next Legislature," he concludes, "and I want to see the Progressives use it properly and for the benefit of the whole people." All this has a fine sound, and a very practical sound, too, but what is a plain private in the army of the Lord to think of it? What does Gov. Bass mean by talking about Progressives "outside our own party"? Is not such a being impossible, by hypothesis? As for standing by men who believe in progress, is it not the duty of such men, no matter how much more numerous they may be than the real Progressives, to rally to the standard of the latter? Gov. Bass talks like a man who would put country above party. He should be court-martialled.

Those who are in the habit of regarding a strong central government as the only possible instrumentality for procuring humane reforms in State conditions may get some instruction from the annual report of South Carolina's Commissioner of Labor on the textile industries of that State. He points to the decrease in child labor. Since the new law cutting out all exemptions has come into effect this year, "there is not a single child under twelve years of age employed, as far as we are able to find through inspection"; and the number of children under sixteen years of age in the mills has fallen from 8,432 in 1910 to 8,312 in 1911 and 7,490 in 1912. This diminution has taken place in the face of a marked increase in the whole number of workers, the number above sixteen years of age having increased by 2,637 in the past year.

In States like South Carolina the temptation is strongest to refrain from imposing restrictions upon the exploitation of child labor, on the ground that it is necessary for the development of new industries in the face of the competition of wealthier States; yet we see not only progress in such legislation, but also an earnest spirit in the enforcement of it, and hearty satisfaction in its results. "I am gratified, too," says the Commissioner, "that without the use of extensive child labor the textiles are this year able to pay nearly $2,000,000 more to the employees in wages and show an increase in the value of their annual product of over $2,500,000." Whether more rapid progress could, in actual practice, be attained by Federal compulsion, may be doubted; and certainly the moral effect of local self-improvement, and the absence of a vast machinery of Federal inspection and control, are factors in the question which only the thoughtless can belittle.

One of the strange inconsistencies in the Southern treatment of the negro is revealed by the appearance before Gov. Brown of Georgia of white men to protest against the driving of the negroes out of six counties in that State. It seems that there is a sort of Ku Klux at work, posting notices at night which warn all the colored people to leave under threat of terrible punishments. As a result, many of them are going, and one of the men who called on the Governor—but dared not give his name—thus described the consequences of the flight: "If something is not done to check this exodus . . . our wives and daughters will soon be put to the necessity of doing the cooking, washing, and performing other menial labor. In addition, the farmers will suffer greatly, for they will be deprived of field hands." Not one word, of course, about the victims of the outrage, of their loss and suffering in having to abandon homes and property and flee for safety. The sole consideration of importance is that the wives and daughters of prosperous whites may be without servants and the farmers without farm hands. Now, we all know that the negro is the worst possible servant and farm-hand, that he is the curse of the South because of his criminal nature and general worthlessness. Ought he, then, not to be driven out at once, in order that Georgia may surely be a white man's country and the way be cleared for foreign immigration?

One more swindling agency for the sale of worthless securities has been run down by the Post Office authorities. This comes at the very time when the methods of two other concerns of the kind are being ventilated in a criminal trial. In all this exposure, many will doubtless see a powerful new argument for government protection of investors. We have nothing to say against a proper regulation by law, such as exists in Massachusetts, of the issue of stocks and bonds by any corporation, but we would ask what possible statute could safeguard the greedy and gullible people who were caught by these swindlers? On the face of the enterprises, they were fraudulent. They promised impossible returns. Yet clergymen and college professors were found in abundance ready to snap at the get-rich-quick bait. Now, the most paternal of governments cannot protect its idiotic children. Unless it locks them up, it cannot prevent them from being taken in, when they go about fairly begging to be taken in. See to it that the venders of bogus mining stock or of securities of a company to manufacture diamonds cannot get at them, and they will immediately begin to buy gold bricks and invest in corner lots in the moon.

The replies received by the New York *World* from college and university presidents in response to its telegraphic inquiry asking for their opinion on the Panama tolls question show an intensity of conviction on this subject. Many of the replies, while clearly expressing the writer's own opinion that the discrimination in the present law is in violation of our treaty obligations, put still greater emphasis on the nation's honorable obligation, which ought to be felt as binding even by those of a contrary opinion, to submit the question to arbitration in case we do not voluntarily repeal the discrimination. "One of the two things must certainly be done," says President Wheeler of the University of California, adding: "I should prefer, however, in the interest of the national pride, to have the act amended."

The strongest statement is that made by President Butler, of Columbia, who pronounces the discrimination not only a violation of "our legal and moral international obligations," but also a defiance of sound public policy through the "subsidizing of a monopoly." President Judson, of the University of Chicago, stands alone in expressing the opinion that it is "merely a domestic question, which could not, therefore, concern the Hague Tribunal"; but it would be interesting to know how he thinks the very question can best be decided, whether a disputed point involved in the interpretation of a treaty is or is not a "merely domestic" point. Is it for the judgment of one party to the treaty or for the decision of a tribunal of arbitration? As for the subsidy feature of the matter, now that this has been admitted, and admitted to be unjustifiable, by Mr. Taft's own Secretary of War, it ought to be possible to rally enough men out of both parties in Congress to obtain the outright repeal of the discrimination.

In his annual report the president of the Massachusetts Institute of Technology discusses the future relations of the Institute and Harvard. The time for a close physical and administrative union passed with the purchase of the new site for the Institute, if, indeed, it had not passed before. But now that these two great institutions are soon to be within a few minutes' ride of each other, the question of an exchange of facilities and of the use of special equipment possessed by the one or the other is thrust to the front. Mr. Maclaurin discusses it with admirable good sense, suggesting that there is no reason whatever why Technology students should not profit by the inspiration of exceptionally able teachers at Harvard, and vice-versa. The beginning of such relations, he thinks, should first be through the interchange of graduate students. In the matter of physical equipment, the case is still plainer. President Maclaurin points out that the Institute may soon build an experimental tank for its department of naval architecture. Why should not Harvard have the use of it? It would surely be a great waste for Harvard to build such a tank, but ten minutes away. Again, the Technology is to have the best mining and metallurgical laboratories in existence. Harvard ought to profit by them precisely as the Technology should be able to use, under proper restrictions, those great university museums at Harvard which could only be duplicated, if at all, by tremendous expenditure. Harvard, we are sure, will be ready to meet the Technology half-way; and this friendly coöperation ought to be a valuable example to the whole college world.

What a tangled web we get into when we set out to find what a word really means. The Manchester *Guardian* relates the story of two men who made a wager regarding the meaning of "lurid." One of them had used the word as descriptive of the glare of a night fire which had made the sky intensely red. The other pulled him up with the information that the word meant "pale" and not "deep red." As several dictionaries agreed, in a manner not customary among doctors, in defining the word as "pale, wan, ghastly pale," and only books and newspapers could be found as authorities for using it in the other sense, the first man reluctantly paid the bet. The *Guardian*, however, points out that "the latest and greatest English dictionary" gives this definition of "lurid":

> Shining with a red glow or glare amid darkness (said of lightning flashes across dark clouds or flame mingled with smoke).

And it apparently clinches the matter by a quotation from Wordsworth:

> Save that above a single height
> Is to be seen a lurid light
> Above Helm crag—a streak half-dead,
> A burning of portentous red.

"Apparently clinches," however, only, for the learned writer proceeds to demonstrate that Wordsworth had no philological right to use the word in that way. "Lurid," we are told, began life as a Latin adjective, meaning "pale yellow," and used chiefly of the complexion. The nearest English word for it is "sallow." From that, it came to mean something like "ghastly." But as for signifying "glaring red through smoke," as the English poets compel it to do, there is no authority—except, of course, the English poets. And so the puzzle remains; may any one who is not an English poet use "lurid" in any sense but that of "pale"?

That the English plans for celebrating the hundred years of peace with the United States should include the placing of a statue of George Washington either in the Abbey or in Westminster Hall shows again what time can do to efface ancient animosities. All intelligent Englishmen have to-day an admiration for Washington's character and abilities. The man whom their ancestors would have hanged as a traitor, they themselves recognize as one who was in America simply fighting the general English battle for constitutional liberty. Certainly, Washington's statue in Westminster Hall would not seem so much of a misfit as Cromwell's in Parliament Yard. Washington resisted the House of Commons, but he did not turn it ignominiously out of doors. If there is any objection to placing an effigy of Washington in Westminster Abbey, it will be artistic rather than patriotic. The authorities might well resolve not to add another to the medley of inharmonious statues that deface the Abbey.

The "calculated indiscretion" still plays its part in high affairs of state. Readers will recall the excitement caused, just about a month ago, by a misinterpreted telegraphic order from the French War Office, as a result of which the reserves in several French communes on the northeastern frontier were summoned to the standards. It was immediately explained that the blunder rested with a subordinate officer, who should be promptly punished for setting the mobilization machine into motion and Europe's nerves on edge. A recent editorial in the Paris *Temps* pointed out, however, that the incident was not without its bright side. The alacrity with which the reserves responded to the call—the *Temps* speaks of them as marching to the barracks with cheers and chanting patriotic songs—has removed the painful doubts which have been created by the anti-militarist and anti-patriotic agitators of the school of Gustave Hervé. Now we have the following news item in the London *Times:*

> The French Government has addressed a letter to the Prefect of the Department of Meurthe-et-Meuse asking him to convey to the Mayors of the nine communes of the district of Arracourt the Government's appreciation of the rapidity with which the local mobilization at Arracourt was carried out. This mobilization, which took place owing to a telegraphic error, was ordered by Brigadier Blion, who has himself been complimented by Gen. Goetschy, commanding the Twentieth Army Corps, on the promptitude with which he acted.

No mention is made of the telegrapher who made the regrettable error; but it is not impossible that his name will appear in the New Year appointments to the Legion of Honor.

Prince Taro Katsura has now attained the Japanese Premiership for the third time. Japanese political parties are not easy to distinguish, but, broadly speaking, in the person of Katsura the conservative and militarist element in Japan once more comes to the front. The new Premier is certainly to-day the most powerful figure in Japanese public life. He enjoys the prestige of having guided the country through the war with Japan. He made way in January, 1906, for a Ministry headed by Marquis Saionji, yielding to the inevitable unpopularity that comes with the settlement of the difficult financial problems after a great war. He replaced Saionji at the head of affairs in July, 1908, made way for him once more in August of last year, and again succeeds the statesman who may be regarded as the exponent of Liberal policies in Japan.

Marquis Saionji's Cabinet went to pieces on the rock of militarist opposition. He was pledged to financial reforms which could not be carried out without serious retrenchment in the army and navy budgets. At the same time, he found the military elements solidly arrayed in behalf of an increase in the army and navy programme. Count Terauchi, who as Governor-General of Korea has pursued a forceful and effective policy of pacification in that country, precipitated the fall of the Saionji Cabinet by threatening to resign his post in Korea. If Katsura, instead of Terauchi, has been called upon to form a new Cabinet, it was probably because of a desire not to accentuate the triumph of the militarist party. The new Premier's position is all the more powerful because he combines in himself the official authority of President of the Cabinet with the unofficial, but still higher, authority exercised as a member of the group of Elder Statesmen. As Grand Chamberlain to the new Mikado and Lord Keeper of the Privy Seal, he is chief counsellor of the young Emperor, his only rival being the aged Prince Yamagata. His foreign policy has been described as one of firmness towards China and this country, and of friendliness to Russia and Great Britain.

LEADERS IN A DEMOCRACY.

Gov. Wilson spoke last week with emphasis of his determination to carry into execution the policies to which he stands committed, yet in the same breath announced his purpose of continually going to the people to ask what they want done. He has more than once said that he aspired to be the "spokesman"—and, presumably, the efficient agent—of the popular will. If he has any quality of vigorous leadership, he prefers to think of it as merely responding to direction by the people. It would be obviously easy, for those so minded, to see in this something very like a contradiction in terms. The true leader cannot so completely lose his identity in the follower. That would be to go over to the famous dictum of the French politician, shame-facedly trailing after a mob of his constituents: "I must follow them, for I am their leader." But Gov. Wilson's utterance is doubtless not to be taken too literally. It is partly a piece of left-over campaign rhetoric. Partly, we presume, it is the seeming self-effacement of a masterful man who knows what he means to do, but desires to base his action upon the semblance of a strong popular demand. It would not be a bad definition of a successful leader in a democracy that he is a man of abundant initiative and resolute will who appears to be doing only what the people desire him to do.

As regards Gov. Wilson, the surest guide to his future conduct is furnished by his official course in New Jersey. In certain important matters, he did not hesitate to assume and avow leadership. One of his explicit and daring deliverances, in his campaign for the Governorship, was that, if elected, he himself, and no other man, should be the leader of his party in the State. This, of course, had a specific occasion and a definite reference. It was in answer to Mr. Record, who publicly questioned Wilson about the Democratic machine and its former operator, "Jim" Smith: what would the new Governor's attitude be towards the old boss? Mr. Wilson answered squarely. He would lead, not Smith. That was flat. It proved also to be absolutely true, as everybody knows. And the tremor that ran through all bossdom at Mr. Wilson's bold promise and complete fulfilment has not yet subsided. In this respect, at least, he is certain to be a leader in the Presidency. No boss can dictate to him. No threat of punishment at the polls will terrify him. He will be his own master.

But this attitude towards his party organization is only one part of the work of a real leader. If he is such, he cannot neglect the devising and advocacy of party policies. How will he set about that? Is he to look into his own heart alone? Or is he to have no thought or will except what is conveyed to him as he places his ear to the ground? The whole question is confessedly intricate. It goes close to the centre of successful statesmanship. Lord Rosebery has written of the mysterious relations of a political leader to his party. He both gets and gives. Rosebery thinks that he gets more than he gives. But that depends upon the man. Gladstone did not come out for Irish Home Rule because the brains and mass of the Liberals demanded it. He rather imposed that policy upon his party. Joseph Chamberlain was not a puppet, moved by party wire-pullers, when he startled England by advocating a return to protective tariffs. He furnished an instance of a vigorous statesman scoring off his own bat, and forcing a reluctant party to fall into line behind him.

It would be foolish to say that this can often be done, or should always be attempted. A Prime Minister or a President has frequently to be an opportunist. That word has a good sense as well as a bad. It may signify the public man who, to be sure, has plans which he cherishes and hopes which he keeps alive, but who knows that he must wait for the ripening of the time. Never failing to urge his policy on fitting occasions, he yet has the patience of a Lincoln to abide the slow result. Lord Cromer describes the responsible statesman in a democracy as very much in the position of a man in a boat off the mouth of a tidal river. He long has to strive against wind and current until finally a favorable conjunction of weather and tide forms a wave upon which he rides safely into the harbor. There is an essential truth in this which no man attempting to play the part of leader in a democracy can forget except at his peril. Government by public opinion is bound to get a sufficient body of public opinion on its side.

But withal it is manifestly the duty of a leader to help form a just public opinion. He must dare to be temporarily unpopular, if only in that way can he get a hearing for the truths which the people ought to have presented to them. He is to execute the popular will, but he is not to neglect shaping it. It is his duty to be properly receptive, but his main striving ought to be that virtue should go out of him to touch and quicken the masses of his citizens. If their minds and imaginations are played upon with sufficient persistence and sufficient skill, they will give him back his own ideas with enthusiasm. A man who throws a ball against a wall gets it back again as if hurled by the dead brick and mortar; but the original impulse is in his own muscle. So a democratic leader may say, if he chooses, that he takes only what is pressed upon him by the people; but his function often is first to press it upon them.

Without something of this personal initiative and vigor, it is certain that there can be no true leadership. The theory of a ruler always listening for the word of command from the crowd breaks down in a dozen ways. Gladstone said that the orator got as vapor from his audience what he returned as shower. But if a would-be leader collects only the dust that blows through the streets and across the fields, what can he give back but mud? No: the ideal democracy is a led democracy, and is always looking about for men of force to show it where to go. If they fail it, it is in constant peril of attempting to proceed where there is no thoroughfare. And no quality is more necessary in them than courage to stand up and tell the people when they are wrong. They may strike a President, but they are bound to hear him. He has, as Mr. Wilson has said, the one voice that carries through the entire nation; and unless he seizes the opportunity to put into it both the exhortation and the warning which the times need, he is falling short as a leader.

FINANCE AND HUMAN NATURE.

The report of Mr. Morgan's testimony before the Pujo Committee made fascinating reading. For, in addition to the technically financial contents of Mr. Morgan's examination, it yielded matter of immense social and personal interest. That Mr. Morgan was in many ways an excellent witness does not need to be argued. His mind moves with great directness. He brushes away encumbering details to go swiftly to the core of the business. When he does not know, he says so without hesitation. If his opinion is asked, he gives it squarely. Without fencing or hedging, he answered question after question, even when they went deep into matters of his policy and motive. Distinctly, he made the impression of uncommon ability uncommonly frank. This is the reason, taken in connection with his great position in the financial world, why thousands who know nothing of banks and stocks and interlocking directorates and voting trusts followed his testimony like men absorbed. It was to them not so much a financial revelation as a big human phenomenon unveiling itself.

Now, we freely admit that when the natural instincts are allowed to play freely upon matters of special knowledge and exceptional activities, there is danger of blundering. The man in the street is not able to stand as a judge over everything. When it is said that common sense is good enough to apply to matters about which the ordinary man is uninstructed, we have to be on our guard lest what we apply be really common ignorance. And there are many aspects of the affairs on which Mr. Morgan was examined upon which it would be rash for any but experts to attempt to pronounce. The unknown is not always held to be the magnificent; it is often regarded as the suspicious. And we doubt not that some things in Mr. Morgan's testimony will be unjustly suspected by the man who boasts of his horse sense because he does not understand them. It does not necessarily follow, though some hasten to assert it, that every corporation or life insurance company on which there is a Morgan director is under Mr. Morgan's thumb. Men may easily get into an unduly suspicious and skeptical frame of mind about all these methods of high finance, and so do wrong to those who practice them. This must be confessed at the start and is always to be borne in mind. But our present point is that a great deal was brought out in Mr. Morgan's testimony which was not in the least technical or professional, and upon which any sensible man may express his opinion. When human nature is involved in finance, those who know anything about human nature have as good a right to be heard as the greatest financier. And a few of the positions which Mr. Morgan took, with his admirable frankness, may well be challenged as contrary to all that is settled in regard to the nature of man.

Mr. Morgan made no bones of admitting that he and his associates might, if they chose, wield their great financial power harmfully. With their control of banking facilities, their large influence in the extension of credit, they could, if they so willed, discriminate against this corporation and in favor of the other, set one man up and knock another down. That anything of the kind was done, Mr. Morgan naturally denied. But he conceded that it might be done; yet, when asked if the vesting of such enormous power in one man, or group of men, was not dangerous, and whether it would not be wise to have some check upon it, he gave his opinion strongly in the negative. The vast potential power he did not question; but he maintained that it would be used wisely and fairly. Now, this is a question, not purely of finance, but of human nature. The insatiate love of power and the peril that lies in unlimited power have been the theme of moralists and writers on government from the beginning of civilization. Mr. Morgan is confident, and so are many, that he would not use a giant's strength tyrannously. But would he trust it to Jay Gould or John W. Gates or Lawson or Keene? It will never do to say that unchecked power is a good thing because it is in the hands of good men. The better the men are the readier will they be to confess the need of putting limitations on any such heaped-up and perilous power over the lives and fortunes of their fellows. That even good men grow drunk with power, and need to be protected from its excesses, is one of the oldest teachings of human experience. Modern finance cannot brusquely set it aside.

Human nature, we have said, may too much suspect finance; but finance may expect too much of human nature. It certainly did so in the person of Mr. Morgan, when it asked us to believe that a man may have absolute control of another, yet leave the latter entirely independent. The question arose in connection with the workings of a voting trust. In the case of a given railway, for example, it appoints all the directors; those directors are invited to have financial dealings with the firm or voting trust upon which their official lives depend; and the question was put to Mr. Morgan whether he did not regard such a relation as unfortunate. Could the directors really exercise an independent judgment? Would they dare refuse a plan advantageous to the men who held them in the hollow of their hands? Mr. Morgan coolly maintained that they could and would. He affirmed that directors of such precarious tenure—whose official heads might be cut off at the end of the year—are in the habit of acting as if they were entirely their own masters. But this again is not a mystery of finance; it has to do with the plain facts of human nature; and what man in his senses is able to believe that the subtle play of motive in such cases can possibly be what Mr. Morgan would have us think it? He promptly and boldly gave his opinion, on this as on other matters, but we are bound to say that, in this particular affair, he drew a picture of human nature which the mind instantly rejects as incredible.

VICE AND GOVERNMENT.

That New York compares favorably with any great city in the world in the matter of vice, we have been repeatedly and emphatically assured on the highest official authority. Whether this be true or not, so far as regards the actual extent of "the social evil" taken in itself, we shall not undertake to judge. Government, in any event, is only one of the factors that enter into the case; economic conditions, the prevailing moral standards of the community, and other elements of pervasive importance and influence, go to the shaping of the situation. There may be other cities in which there is more vice, or in which its manifestations are more revolting, than in our own. But there is another aspect of the vice question no less serious than this. How the city government affects vice is one thing; how vice affects the city government is another. And in this regard New York has an ignoble preeminence over all the great cities of the world which, so far as we have observed, neither Mayor Gaynor nor any one else has attempted to dispute.

This should have been on the mind and heart of every citizen of New York when he read such a story as that which Sipp, the keeper of a disreputable hotel, gave to the Curran Committee the other day. For what that witness disclosed was something very different from the knavery of a patrolman or two, or even the venality of so high an officer as an inspector of police. The note that ran through his whole story was the note of Tammany. It was Tammany that had to be appeased; it was Tammany that held Sipp safe if he satisfied the desires of its henchmen, and that cut off the means of his disgraceful livelihood when those desires were crossed. Nor were the allegations vague or general. Names were named; names of men in the police service and out of it; above all, names of men strong in the organization, and especially the name of one man who is known as among the closest friends of Murphy, a man of high standing in Tammany. Now, we do not know that this particular story is true, and the person accused has branded it as an invention. But we do know that nobody was in the least surprised by it, that no indignant denial by Murphy was forthcoming, that everybody feels sure that the only thing novel about Sipp's story is its actual production in public. So perfectly is the situation understood as a matter of "common knowledge" that everybody regards the story as merely a sample of what a hundred Sipps could tell, and tell truthfully, any day in the year.

Can this situation be matched in London, or Paris, or Berlin, or Frankfort, or Glasgow? Is there, in any of these cities, a great depository of governmental power which stands in any such relation to the commercial exploitation of vice? Is there, in any of them, a man with whom the whole people have to reckon as coördinate in strength with the community itself, and whose friends and friends' friends systematically profit by blackmail levied on the keepers of brothels and disreputable hotels, or by being in that trade themselves? That is the real issue between the people of the city of New York and Tammany Hall, between the people of the city of New York and Murphy. Over this filthy morass of prostitution and bribery and blackmail the structure of Tammany's power is built; this connection between their government and the traffic in vice the people of New York have been tolerating. And the man at the centre of this system they have allowed to get such a hold on public power as to overshadow the State Legislature, to paralyze the Governor, and to come dangerously near to wrecking a great political party in the nation.

At this particular time, indeed, Tammany is not in absolute possession. Thanks partly to Mayor Gaynor's independence and force, but above all to the success of the Fusion movement in electing a remarkably strong group of anti-Tammany men to the high places in the government other than the Mayoralty, the grip of the Murphy machine on New York City has, in the past three years, been far less than it has been in former times. But so deep down are the sources of its strength that even when it seems to be thrown out altogether its malign influence is powerfully exerted in a thousand ways; and always we have to reckon with the menace of the complete restoration of its domination. The disclosures that have come thick and fast ever since the murder of Rosenthal open up questions with which the best thought of the wisest and bravest men will hardly suffice to grapple; but they challenge in quite another way the manhood and the civic pride of the people at large. It may be impossible to solve those problems of vice and crime the struggle with which is as old as civilization; but this is no excuse for tolerating that shameful identification of political power with vice and crime which is the peculiar disgrace of the American boss-ridden city, the disgrace which stamps the name of New York with a brand known throughout the civilized world. Whatever else may come of the Becker case and the Curran Committee revelations, there should be no doubt of its breeding such determination to crush the Tammany monster as this city has not experienced since the days of Tweed.

A MATHEMATICAL CENTENARY.

To be an illustrious mathematician is to have attained as high and shining a reward as any that comes to genius. In no department of thought is a great intellectual conquest the source of more unquestionable satisfaction to the man who has achieved it; in none is it rewarded by more enthusiastic homage in the charmed circle of his peers. But it is far different as regards the outside world. Of those mathematicians whose names "on the stretched forefinger of all time sparkle forever," so as to be visible to the multitude, the list is extremely short. Ask the first man of culture you meet to name the great mathematicians of our own time and of past ages, and he will hardly get beyond Archimedes and Euclid for the ancients, and Newton and perhaps Laplace for the moderns. He may think of Descartes or Pascal or Leibnitz, but this will probably be because he happens to know that, besides being philosophers or controversialists, they had also done something in mathematics. Even the four names first mentioned owe their prominence in the general mind mainly to something other than their distinctive achievements in pure mathematics. Euclid's name is a familiar sound to every schoolboy for obvious reasons. Archimedes is known rather for the principle of the lever and the "eureka" story than for his fathership of the method of infinitesimals. Newton is, by general acknowledgment, the most majestic name in the history of science; and the mathematical triumphs of Laplace would not have sufficed to place him in the list of the universally known had they not been connected with the more palpable interest attaching to astronomy. Of the splendid array of commanding minds whose conquests make up so wonderful a record of intellectual achievement, the world of non-mathematicians is, with a few chance exceptions, wholly unaware.

Scotland cannot boast of any great share in this story; but she is fortunate in being able to claim one mathematician who stamped his name on the pages of history by a single achievement of picturesque character, of great practical importance, and of such a nature as to have made his name more familiar to the world in general than that of any but the little group we have indicated. The announcement was made a few days ago that the Royal Society of Edinburgh was preparing to celebrate the tercentenary of the invention of logarithms by Napier of Merchiston, whose "Mirifici Logarithmorum Canonis Descriptio" was published in 1614. Of the merit of this achievement as well as its originality, there is no doubt, though tables of a somewhat similar nature had been constructed (but not published) by a Swiss mathematician, Bürgi, a few years before; a coincidence which, as is usually true in such cases, is to be explained on the ground that the time had arrived when the need of some such invention had become acute. The calculations demanded by the grand development of astronomy in the hands of Tycho Brahe and Kepler were stupendously laborious; and Napier deliberately set himself the task of finding a means of substituting addition for multiplication, and subtraction for division. This, and much more, his invention of logarithms effected; and its effect, as has been said, was to double the astronomer's life by halving his labor. It was rapidly adopted, not only by astronomers, but by navigators; and as a mere delight and fillip to mathematicians, it cannot have failed to act as a powerful stimulus to the advancement of mathematical science in general.

We do not know what form the celebration at Edinburgh will take. But one might imagine a celebration in which the chief feature should be some kind of bird's-eye view of what has happened to mathematics since Napier's time. Between the science of the day when Napier's "Canon Mirificus" stirred the geometers and astronomers with a fresh delight, and that of our time, there is a contrast no less impressive than that presented by our power-mills and dynamos and skyscrapers, as compared with the primitive achievements of three hundred years ago. Story has been piled upon story, and mine has been bored under mine, until the whole structure is awe-inspiring—or appalling, as we may choose to view it—in a degree that Napier's contemporaries could not have dreamed of. Perhaps nothing can bring the contrast more vividly to mind than the fact that the simple device of exponents to denote the powers of a quantity had not come into use in Napier's time. Indeed, what made his merit so signal is that he should have evolved the idea of the logarithm without having as a starting point the idea of the exponent. The logarithm of a number soon came to be regarded as the exponent of the power to which a fixed base must be raised to produce the number; to Napier, his logarithms were simply a series of numbers which form an arithmetical progression, while the natural numbers to which they correspond form a geometrical progression.

We may point here to a curiosity of history. Among the intellectual events of British history there are not many that stand out with more spectacular distinctness than the publication of Napier's "Canon Mirificus," of Malthus's "Essay on Population," and of Darwin's "Origin of Species." Between the work of Malthus and that of Darwin there was, as is well known, a distinct causal connection. Of course, nothing of the kind is true between Napier and Malthus; nevertheless, it is interesting to note that they had in common the juxtaposition of an arithmetical and a geometrical progression. That this was of the essence of Napier's work is simple matter of fact; but, in spite of the patronizing indulgence or complacent contempt with which Malthus's use of the comparison between the geometrical and the arithmetical progression has sometimes been treated, it was truly this that gave backbone to his doctrine, both by its effect upon his own mind and by its inherent appropriateness. The circumstance has no mystic significance, nor would we abuse the opportunity to infer from it anything about the characteristics of the British mind; but as an example of singular fertility in consequences issuing from the contemplation of a simple mathematical idea in fields as wide asunder as possible, the fact is worthy of passing mention.

AN INSATIATE NAVAL POLICY.

We have now at hand the full text of the speech which Premier Borden made to the Canadian House of Commons, at the time of proposing to build for the British navy "three of the largest and strongest ships of war that science can build or money supply." The money, in this case, will be $35,000,000, which the Canadians are asked to contribute in order to show that they are prepared to "defend on sea as well as on land our flag, our honor, and our heritage." Mr. Borden spoke as both a Canadian patriot and a British Imperialist. Some of the things which he said in the latter guise may, we should think, make Englishmen wince a little. They could scarcely like to hear that "irreparable disaster" might overtake the British fleet if Canada should neglect to do her duty. But this was largely rhetorical. The Canadian Prime Minister was more matter-of-fact when he undertook to explain the Imperial naval policy, and to show just what was the present status of the British navy. Some of his statements sound rather alarmist and might be thought indiscreet. But Mr. Borden was speaking by the card. For he made public a special memorandum prepared by the British Admiralty which was in many ways more significant than even the Premier's speech or the proposed gift of ships by Canada.

The Admiralty expressly disclaimed any thought of influence on Canadian action. Aid from Canada would be gratefully accepted, but the Admiralty wished to leave no doubt of England's ability to cope with her naval problems alone. The intention of the memorandum was merely to set forth the actual strength of the British navy at present, together with the building programme which is necessary, in the opinion of the Admiralty. And here we get a glimpse of the absolutely limitless demands of the big-navy men. For the Admiralty, after showing how England, by great exertions and enormous expenditures, has made arrangements to keep well ahead of the German navy, coolly lets it be known that this is only a beginning. It points out "the simultaneous building by many Powers of great modern ships of war." Then it makes the following ominous statement:

> Whereas, in the present year, Great Britain possesses eighteen battleships and battle-cruisers of the Dreadnought class, against nineteen of that class possessed by the other Powers of Europe, and will possess in 1913 twenty-four to twenty-one, the figures in 1914 will be thirty-one to thirty-three, and in the year 1915 thirty-five to fifty-one.

Talk about the daughters of the horseleech! They never cried "Give," "Give," with anything like the insatiate urgency of our modern naval authorities. It is impossible to get from them a fixed policy. All their estimates of strain and cost are wholly provisional. What they tell us to-day will make us "safe" or "invincible," to-morrow they will declare to be entirely inadequate. There is a world of sinister meaning in this memorandum of the British Admiralty. Ever since 1906 the one cry of the alarmed big-navy champions in England has been that on no account must Germany be allowed to get ahead. In order to make sure that the country would remain unmolested, it was needful to enlarge the British shipbuilding plans so as surely to outstrip the German. This has now been done. In Dreadnoughts the British navy is already superior to Germany's strength. By 1915, the Admiralty admits, England will have, in her home waters alone, twenty-five Dreadnoughts to seventeen in the German navy. But are the English taxpayers now to be allowed to take heart, in the hope that the worst of the pressure is over, and that a "margin of safety" has at last been assured? Not for a moment. The Admiralty is ready with endless reasons why battleships must be provided without end. There is the need of replacing worn-out and obsolete vessels. There is always the danger that Germany will launch more Dreadnoughts. And, finally, it is necessary to consider what Austria and Italy and Russia and France and even Spain are doing to strengthen their naval power. All this affects the "possibility of adverse combinations being suddenly formed" against the British navy, and plainly points to the need of "larger margins of superiority." Thus is the nation—all nations—asked to enter upon the vicious circle. It is vitally necessary that you must have more ships, but the minute you get them the necessity of having still more is equally vital. To say that this must go on is to confess the bankruptcy of statesmanship.

In Canada, Mr. Borden's proposal was widely acclaimed. Even his political opponents approve the general scheme. To fail to do so would not be "patriotic." The Opposition party is always expected enthusiastically to "stand behind" the Executive when it is a question of large outlay for war purposes. But the Canadian Liberals who are standing behind Mr. Borden are doing so with knives in their hands. They applaud the main plan, but angrily find fault with some of its details. The ships are to be given outright to England and incorporated in the British navy. What then becomes of the Canadian navy? To establish one was supposed to be a settled national policy, but here is a Conservative Government kicking it over. Moreover, the ships are to be manned and officered, not by Canadians—apparently, they are considered not good enough—but by Englishmen. Then what a hollow kind of generosity it is to give the ships to England, so as to relieve the over-burdened taxpayer, and thereupon compel him to pay the entire bill for operation, upkeep, and repairs. These are but a few of the points which the Liberal leaders and newspapers in Canada are making against Mr. Borden's proposal as it stands. Politically, it seems to be a shrewd stroke by the new Government. The organ of Bourassa, *Le Devoir*, speaks of Borden playing his "trump card." But as there is political motive on the one side, so there will be on the other; and there will be long and stirring debates in the Canadian Parliament before the measure is accepted.

JOHN SYNGE.[*]

John Synge was so skilful in eluding biographers that he was dead before it was generally known in this country that he had existed. Within the last year or two he has become one of the most conspicuous figures in the literary world. Yet current discussion has proceeded for the most part in ignorance of the facts of his life and has confined itself mainly to one or two of the plays. Even among the better informed there still remain the widest differences of opinion regarding his character, his relation to the so-called Irish Renaissance, and his appropriate niche in the temple of fame. And in consequence of various non-literary forces, the division has been rather partisan than critical. It is darkly hinted in one quarter that he owes everything to the French decadents. On the other hand, Mr. Yeats would have us believe that his work came straight from the heart of Erin. On the one hand it is argued that he is only a clever craftsman. But Mr. Howe holds that he stands by his absolute achievement only a little lower than Shakespeare. "If he had lived," says Mr. Howe, "he could not but have added to the number of his plays; and yet in the six plays he has left us, what that is essential in life has he failed to include?" This is the question one asks of the supreme geniuses; this is the question one asks of Shakespeare. With the collected works of Synge now before us and with eager advocates and jealous disparagers on each side of us, it may be worth while to inquire in an entirely dispassionate way what manner of man this was.

I.

Synge was for a considerable portion of his life practically as well as theoretically a tramp. We know that he was born at Rathfarnham, near Dublin, in 1871, and that he passed through Trinity College. Then the door is almost closed upon his occupations till 1898-9, when he was called from abroad to take part in the new movement in Ireland. Yet we are permitted to catch one significant glimpse of a poverty-stricken, silent, rather morose young man in ill health, who has left his native land and is apparently seeking to escape from his memories in aimless wanderings among alien people and alien modes of thought. His first wayfaring was in Germany, where Heine was perhaps the will-o'-the-wisp to his feet, but all roads lead the literary vagabond ultimately to Paris, and when he had made his pilgrimages, he brought up in the Latin Quarter. "Before I met him," says Mr. Yeats, "he had wandered over much of Europe, listening to stories in the Black Forest, making friends with servants and with poor people, and this from an æsthetic interest, for he had gathered no statistics, had no money to give, and *cared nothing for the wrongs* of the poor, being content to pay for the pleasure of eye and ear with a tune upon the fiddle."

Synge's transformation from a tramp into an Irishman of letters his sponsors represent to us as a kind of modern miracle. But they can preserve this air of mystery only by insisting that the return to Ireland meant an abrupt break and a fresh beginning rather than the natural evolution of his career—only, in short, by maintaining that what is clearly illuminating is wholly irrelevant. Now about 1895 Synge installed himself in solitary lodgings in Paris and undertook to prepare himself to be a "critic of French literature from the French point of view." At this point our authorities diverge, and Mr. Yeats executes a bit of skilful and characteristic legerdemain. He lifts the curtain in the garret of the Latin Quarter some four years later and discovers the author of two or three poor poems studying the works of Racine. George Moore, on the other hand, says explicitly that Synge was writing indifferent impressionistic criticisms of Lemaître and Anatole France. There is no necessary conflict between these two reports, but there is a noticeable difference of emphasis. Between Synge and Racine I should never attempt to establish any affinity. But between Anatole France and Synge?—that is quite another matter. For the discreet discoverer of the new poet admits that he found Synge "full of that kind of morbidity that has its root in too much brooding over methods of expression, and ways of looking upon life which come, not out of life, but out of literature." Was that Mr. Yeats's covert way of confessing that Synge was steeped in Anatole France? This, at any rate, can be established: Synge's point of view in comedy is identical with that of Anatole France. Despite the Frenchman's vastly greater range of culture, the two men are absolutely at one in their aloof, pyrrhonic irony and their homeless laughter—the laughter of men who have wandered all the highways of the world and have found no abiding city.

---

[*] *The Works of John M. Synge.* Boston: J. W. Luce & Co. 4 vols.

The Cutting of an Agate. By William Butler Yeats. New York: The Macmillan Co. In this are gathered up Mr. Yeats's principal articles on Synge; also articles on Lady Gregory, John Shaw-Taylor, Spenser, and miscellaneous thoughts on poetry and drama.

J. M. Synge. A Critical Study. By P. P. Howe. New York: Mitchell Kennerley.

Mr. Yeats, who is crammed with convictions and constitutionally incapable of understanding this desperate and smiting skepticism—no one, I think, asserts that Synge acquired his humor from the Dublin singers—Mr. Yeats gives a puzzled account of Synge's ideas which unintentionally confirms our conjecture. Synge had, he tells us, "no obvious ideal"; he seemed "unfitted to think a political thought"; he looked on Catholic and Protestant alike with amused indifference; all which comes down to us from education, and all the earnest contentions of the day excited his irony; "so far as casual eye could see," he had "little personal will." This description of moral and volitional prostration could be applied with hardly an alteration to Anatole France. And it should help put to rest the legend of the joyous Synge, bounding over the hills with the glad, wild life of the unspoiled barbarian. There are passages in the "Aran Islands," to be sure, which reveal high nervous excitement induced by conflict with the elements. But there are also clear indications of chronic weariness and low vitality. In the grim humor of his little narrative, "Under Ether," there is something more than a manly resolution in the face of death; there is in it the nonchalance of one who has long made death his familiar.

II.

Synge's verse is what we should expect of a rather despondent young Bohemian, unsure of himself, and seeking among other poets food and forms for his melancholy. I wish to tarry for a moment upon his small collection of poems and translations, partly because, though little known, it is intrinsically interesting, and partly because it reveals so clearly on a small scale the nature of his literary talent. The poems are due to the influence of various masters—to Burns, Wordsworth, Swinburne, and, notably, to that fascinating outlaw, Maistre François Villon. In about one-third of them he sings of death, and in nearly all of them there is a distinguishable echo of some earlier singer.

In the poem, "To the Oaks of Glencree," to take a single example, we notice how Maistre Villon helps him shape and round out the first pure impulse of lyric exultation:

My arms are round you, and I lean
Against you, while the lark
Sings over us, and golden lights and green
Shadows are on your bark.
There'll come a season when you'll stretch
Black boards to cover me;
Then in Mount Jerome I will lie, poor wretch,
With worms eternally.

The startling and paradoxical fact about this collection is that the original poems constantly remind us of some one else; the translations alone seem unmistakably Synge's. The original poems have the merits of skilful literary imitation. They might have been written, however, by Stevenson or Lang or by Mr. Edmund Gosse, or by half-a-dozen other cultivators of old French verse. But neither Mr. Gosse nor Lang nor Stevenson could have written a line of the poem that follows:

> Are you bearing in mind that time when there was a fine look out of your eyes, and yourself, pleased and thoughtful, were going up the boundaries that are set to childhood? That time the quiet rooms, and the lanes about the house, would be noisy with your songs that were never tired out; the time you'd be sitting down with some work that is right for women, and well pleased with the hazy coming times you were looking out at in your own mind.
>
> May was sweet that year, and it was pleasantly you'd pass that day.
>
> Then I'd leave my pleasant studies, and the paper I had smudged with ink where I would be spending the better part of the day, and cock my ears from the sill of my father's house, till I'd hear the sound of your voice, or of your loom when your hands moved quickly. It's then I would set store of the quiet sky and the lanes and little places, and the sea was far away in one place and the high hills in another.
>
> There is no tongue will tell till the judgment what I feel in myself those times.

Here are all the peculiar marks of Synge himself—the irresistibly quaint idiom, the drifting rhythm, the loose sentence structure, thought thrown out after thought, as it were, without premeditation, and blossoming from phrase to phrase, the window opened upon a mist of vague and limitless emotion, the poignant and adorable Celtic wistfulness: while, as a matter of fact, these lines are a tolerably close translation of the first half of Leopardi's "Silva." We are here in the presence of a pure miracle of that style which is Synge's special creation, and which distinguishes him not merely from Leopardi, but also from all his Anglo-Irish contemporaries. With all its apparent spontaneity, his style is as patiently and cunningly wrought out as the style of Walter Pater—wrought of a scrupulously select vocabulary, idiom, and images, with an exacting ear controlling the cadence and shepherding the roving and dreamy phrases. With the aid of this perfected instrument he is able to appropriate and seal as his own poems from authors as diverse as Petrarch and Walter von der Vogelweide, Leopardi and Villon. This fact, taken together with his dependence in the original poems, tends to justify a search beneath the surface of his other work for alien forces secretly shaping his emotions and determining his forms.

III.

The orthodox method of "explaining" Synge is to ignore the poems and translations and point to the volume on the Aran Islands. This is the record, we are told, of Synge's literary salvation; here lies the key to the dramas. In other words, we are asked to believe that Mr. Yeats's theory of poetry has been demonstrated A stranded Irishman living gloomily in Paris without ideal and almost without ideas is sent to a little group of lonely islands to the southwest of Galway, inhabited by stolid fisher-folk in a very backward state of culture. He spends part of every year there—we pass over the fact that the other part is spent in Paris—wearing the rawhide shoes of the natives, warming his blood with their fires and their poteen, living in their kitchens, hearing their legends, and sharing in their noble primitive customs till the folk passion streams through him and makes him a genius. If any one is skeptical, we point to the fact that something like the "germ" of two or three of Synge's plays is actually present here in the form of jottings on folk story and belief. Now, this is a delightfully simple recipe for making a genius. If this were the whole truth, one might agree without reservation with one of the reviewers who declares that the "Aran Islands" is of "vast importance as throwing light on this curious development," and who adds that it "is like no other book we have ever read."

When I first read the "Aran Islands," I thought of that much-experienced vagabond and subtle exploiter of exotic and primitive cultures, Pierre Loti; and I have learned recently with some satisfaction, from a foot-note in Mr. Howe's book, that "Synge thought Pierre Loti 'the best living writer of prose.'" And when I found Synge comparing conditions in the Aran Islands to a disadvantage with what he had seen in his rambles in Brittany, I thought of Anatole le Braz and all his charming studies of the songs and superstitions and customs and characters of that other Celtic people.* And then there drifted into my remembrance the pensive face of another wanderer and exile, half-Irish and half-Greek, known in the Orient as Koizumi Yakumo, and in the Western world as Lafcadio Hearn. As I turned once more the pages of his book on Japan and ran through the "Life and Letters," glancing at his Eastern costume and at the almond eyes of his sons, I reflected that he, at any rate, had possessed the courage to realize the dreams of his favorite author, Théophile Gautier, and the Oriental reveries of Victor Hugo. Finally, I opened the book of Chateaubriand, great father of them all, and read: "When he arrived among the Natchez, René had been obliged, in order to conform to the customs of the Indians, to take a wife, but he did not live with her. A melancholy disposition drew him to the depths of the forest; there he passed whole days alone, and seemed a savage among the savages."

The attitude, the point of view—that is the question about this Irishman and his book on the Aran Islands. Que diable allait-il faire dans cette galère? Now, it is an essential error to imagine that when Synge passed from the Latin Quarter to the Aran Islands he was returning to his own people. He never desired to return to his own people. He went to this group of islands, and then to the most remote and backward of them, because he wished to escape into a perfectly strange and virgin environment.

The peculiar charm of the "Aran Islands" and other books of its class consists not in the identification of the narrator with the life of the people whom he describes, but rather in accentuating the contrast between the sophisticated son of the cities and the simple barbarian. It is the æsthetic charm of looking upon illusions through the eyes of the disillusioned. In the earlier examples of this *genre* the sense of the sundering gulf is emphasized by bringing the weary heir of all the ages into sentimental relations with a "noble" female savage—an unspoiled daughter of the wilderness. But the sentiment now smacks of the romanticism of the old school. In the various books in which Pierre Loti pictures his exotic amours, you may trace the declension of the lovely and beloved barbarian into a mere transitory symbol of the "soul" of the land in which she is found. In the "Mariage de Loti," for example, there is still a breath of strange passion for the poor Samoan girl, yet the lover comments as follows: "In truth, we were children of two natures, widely sundered and diverse, and the union of our souls could be only transitory, incomplete, and troubled." But in that most heartlessly beautiful book in contemporary literature, "Madame Chrysanthème," the breath of passion has given way to sheer nervous disgust. With the little yellow poupée, Loti has nothing in common, not even an emotion. As he takes pains to point out in the dedication to the Duchess de Richelieu, though Madame Chrysanthème seems to have the longest rôle, it is certain that the three principal personages are: "*Moi, le Japon* et *l'Effet* que ce pays m'a produit," "Myself, Japan, and the Effect which that country produces in me"—the bitter perfume which a crushed chrysanthemum of Nagasaki exhales for the nostrils of a disillusioned Academician.

Essentially Synge was seeking the same thing—the perfume which the Aran Islands could yield to a disillusioned Irish-Parisian. He, too, has transferred the sentiment, which was formerly attached to the fair savage, to the land itself. Despite his apparent solicitude for realistic detail, it is the subjective soul of the islands that he is striving to capture. His book, like Loti's, is pieced together of short impressionistic sketches which are related to one another only through the mood of the author. "It is only in the intonation of a few sentences," he writes, "or some fragment of melody that I catch the real spirit of the island, for in general the men sit together and talk of the tides and fish, and of the price of kelp in Connemara." The traditional lovely savage has here suffered a further declension into a peasant girl in her teens towards whom only a friendly attachment exists. Yet this girl, like her famous predecessors, becomes the symbol of what he has come to seek: "At one moment she is a simple peasant, at another she seems to be looking out at the world with a sense of prehistoric disillusion and to sum up in the expression of her gray-blue eyes the whole external despondency of the clouds and sea." And after he has talked to her of the "men who live alone in Paris," he notes that "below the sympathy we feel there is still a chasm between us." I do not wish to push this parallelism farther than it goes. In the "Aran Islands" the *Moi*, as well as the maiden, is subdued almost beyond comparison. But both men, like all the children of Chateaubriand, avail themselves of picturesque exotic scenes as a kind of sounding chamber to enlarge and reverberate the lyric cry of their own weariness in civilized life and their loneliness out of it.

IV.

Synge's dramas are all sad, tragedies and comedies alike, because they are all based upon a radical and hopeless disillusion. In them the native lyrical impulse, which in the poems we found checked by the cynicism of Villon, and which in the Aran Islands expanded under the influence of Loti, is again checked and controlled by the irony of Anatole France. This is no doubt a bald and over-emphatic way of putting the case, but it may serve to indicate the general modes in which foreign forces determined his talent. Synge has been praised by many critics on the ground that he has reconciled poetry with life. In the sense that he has broken through the old "poetic diction" and invented a new poetic dialect with a fresh savor of earth in it, this is doubtless true. But in a profounder sense it is nearer the truth to say that he has widened the rift that was between them. For the drift of all his work is to emphasize the eternal hostility between a harsh and repugnant world of facts controlled by law, and the inviting realm of a lawless imagination. In one of the longest of his plays, "The Well of the Saints," this idea becomes perfectly explicit. Two blind beggars who have long pleased themselves with thinking of each other's beauty are, through a miracle, restored to sight. But the vision of "things as they are" is so hideous that they fall into a violent hatred of each other. And they are both so thankful when they go blind again that they reject with scorn the holy man's offer to repeat the miracle. This is perhaps the most elaborate expression of an idea in all Synge's works, and one is not surprised to learn that four years before the "Well of the Saints" there was performed and printed in Paris a "Chinese" play by M. George Clemenceau, called the "Voile du Bonheur," which contains identically the same idea, and which, as Mr. Howe concedes, it is "perfectly probable" that Synge knew.

For us the "Well of the Saints" is significant only as illustrating with especial clearness that profound sense of disillusion which underlies all Synge's eccentric comedies and constitutes, as I have said, his point of contact with Anatole France. The most France-like comedy that he ever conceived was never written, but the scenario is reported to us by Mr. Yeats. "Two women, a Protestant and a Catholic, take refuge in a cave, and there quarrel about religion, abusing the Pope or Henry VIII, but in low voices, for the one fears to be ravished by the soldiers, the other by the rebels. At last one woman goes out because she would sooner any fate than such wicked company." Now it is just this homeless elfishness of his mirth that distinguishes Synge from Jonson and Molière and Congreve, with whose names his has been so fearlessly coupled. In all the classical comedy of the world one is made aware of the seat whence the laughing spirit sallies forth to scourge the vices or sport with the follies and affectations of men. When the play is over, something has been accomplished towards the clarification of one's feelings and ideas; after the comic catharsis, illusions dissolve and give way to a fresh vision of what is true and permanent and reasonable. Synge's comedies end in a kind of ironical bewilderment. His, indeed, is outlaw comedy with gypsy laughter coming from somewhere in the shrubbery by the roadside, pealing out against church and state, and man and wife, and all the ordinances of civil life.

It is not that many of the *dramatis personæ* are vagrants, but that the dramatist himself is in secret heart a vagrant, and his inmost vision of felicity is a purposeless vagabondage. What are the passages in these plays that all the critics delight to quote, and that the playgoer carries home from the theatre—fragments of them—singing in his memory? They are the passages in which some queen or beggar, touched with lyric ecstasy, expresses a longing to go roaming down the open road or into the wilderness. You will find this gypsy call in every one of Synge's dramas except the "Riders to the Sea." Even to that piece built of the heroic stuff of the bards, "Deirdre of the Sorrows," he gives the same turn: here it is a wondrously fair woman scorning a share in sovereignty and the high king of Ulster to go salmon-spearing and vagabonding with the sons of Naisi. To this man in whose vision of joy we are invited to participate, life presents itself in its comic aspects as a juxtaposition and irreconcilable opposition of hideous realities and hopeless dreams, dreams like the glens of Neifin in the dews of night, realities like Old Mahon in the potato field—"He was a dirty man, God forgive him."

What, then, shall we say of his tragedy? Those who are sealed of the tribe of Synge speak high praise of the "Riders to the Sea," that picture of the drear old woman who has lost all her sons. As Mr. Edward O'Brien declares in the preface printed in the collective edition, this drama is set in the atmosphere of universal action; it holds the "timeless peace" that passeth all understanding. This were vision, indeed. It is a noble phrase, this "timeless peace." It connotes in my imagination the serene enduring forever of victorious heroes and saints who have passed out of tribulation. It is not, at any rate, an empty euphemism for annihilation, but a state in which those of the living dwell who, like the Stoic emperor, have caught a vision of the central beauty and abiding harmony in all the works of God. It is the mood in which all high tragedy leaves us; the still elation into which we rise when blind Œdipus answers the call of the god; the "calm of mind, all passion spent" with which we are dismissed by that superb last chorus in "Samson Agonistes," beginning,

> All is best, though oft we doubt
> What the unsearchable dispose
> Of Highest Wisdom brings about.

Such, they tell us, is the atmosphere of "Riders to the Sea." It is like "Lear," it is like Greek tragedy; it is not, as they hasten with somewhat suspicious eagerness to say—it is not like Maeterlinck's "Home" or "The Intruder." Synge certainly does differ from Maeterlinck in two striking respects. While the Belgian "mystic" deprives his persons of personality and locality and confers a kind of demonic personality upon death, the naturalistic Irishman steeps his lines in personality and the reek of the gray sky and the smell of the sea, and he represents death, in spite of the premonitions of Maurya, as only the old dark way of nature. But so far as what the Germans call the "inner form" is concerned, Synge gives us simply an Irish transposition of Maeterlinck. Strictly speaking, "Riders to the Sea" is not a tragedy at all, because it is not a drama. It might with more propriety be called a tragic idyl—a sombre picture, impressive enough in its kind, with the fearful whispering of the young girls, whose necks have not yet bowed beneath the ancient burden, and the gray broken old mother, who looks before and after and has passed through all illusions, sitting there patiently, passively, receiving the tidings of disaster. Protagonist in the proper sense of the word there is none; no act of the will turning against destiny as a token of human participation in that divine energy into which death resumes us all. It is this turning of the will that makes just the difference between what is drama and what is not; and between the mood with which Samson in Gaza affects us when he says, "And I shall shortly be with them that rest," and the mood with which Maurya affects us when she says, "No man at all can be living for ever, and we must be satisfied." It is the difference between Milton looking into the timeless peace and Synge looking into the noisome grave. We heard him before crying aloud under the golden lights of the oaks of Glencree that in the end black boards would cover him and he should lie with worms eternally. Just that is the tragic vision and significance of "The Riders to the Sea."

STUART P. SHERMAN.

NEWS FOR BIBLIOPHILES.

All the writings of Robert Curzon are of interest and most of them are very rare. He was born in London in 1810, educated at Oxford, and in 1831 was elected M. P. for Clitheroe—a borough which was disenfranchised by the Reform bill the very next year. It is not likely that the House of Commons would have been a congenial sphere for him. He travelled in the Orient, and his "Visits to the Monasteries in the East," which appeared in 1849, earned a well-merited popularity. Curzon set other travellers on the track of the manuscript treasures belonging to the Eastern monasteries. He was for a time an attaché under the fateful embassy of Stratford de Redcliffe, at Constantinople, and served on the commission for settling the boundaries of Armenia and Persia. Apparently he gave satisfaction to both sides, for Sultan and Shah alike decorated him. He wrote an excellent book on Armenia. The collection he made of MSS. to illustrate the history of writing was remarkable and rendered his seat of Parham famous among scholars. The "Catalogue" is a thin folio of which only fifty copies were printed. The Philobiblon Society in 1854 printed in a restricted edition his "Short Account of Some of the Most Celebrated Libraries of Italy." His life of scholarly research ended in 1873. He succeeded his mother in the barony of De la Zouche, of Harringworth, a peerage created as far back as 1308, and, like some other of the older hereditary honors, not limited to heirs male.

The rarest of all Curzon's writings is:

THE LAY
OF
THE PURPLE FALCON;
A METRICAL ROMANCE,
NOW FIRST PRINTED
FROM
THE ORIGINAL MANUSCRIPT
IN THE POSSESSION OF THE HON. ROBERT CURZON.
London:
Printed by William Nicol. Shakespeare Press, Pall Mall.
1847.

It is a quarto volume of thirty-six pages, and, as originally issued, bound in purple cloth with the title on the outside in gilt lettering. It is handsomely printed and on excellent paper. There is the autograph certificate of the printer that only thirty copies were printed. One was printed on vellum. The learned preface is in Roman characters, but the lay is printed in black-letter, and is ornamented by four outline illustrations engraved on wood. In the preface we are told that "the ancient spelling has not been completely followed, as that has been considerably altered and modernised, in the copy from which the legend has been printed." A note at the end of the MS. relates that it was the work of two persons; "the first canto and, I imagine, the beginning of the second, were originally written by Reginaldus Episcopus C——, in partibus infidelium." The rest was composed by one Robert the Rhymer, a "conynge Clerke," of whom no further account is given. If the reader will remember that Reginald Heber was Bishop of Calcutta, he will have a clue to the facts of the case. For the "Lay of the Purple Falcon" is a clever modern antique—not a forgery, but a parody of the extravagances of the old metrical romances. No one who was at all familiar with early literature would take seriously the claim made by its "editor" that it was printed from a modernized copy of an ancient MS. It is, in fact, the work of Reginald Heber and Robert Curzon. Heber, who was a very facile rhymer, composed his part of the "Lay" in 1807, whilst enjoying a moonlight walk with a friend, whose account of the incident may be read in Mrs. Heber's biography of her husband.

From the "Lay" we learn that Syr Claudyus Pantagruelle was Soldan of Surrye, of Oestrich and of Cappadocie, of Cathale, and of "Böchman londe." He had seventy dukes in his train, and every morning he ate a man-child for breakfast. He was in love with "Cycelee," who declined to have anything to do with him unless he brought her a purple falcon. So he clad himself in his armor, beginning with his helmet, which was named "Alphabette," just as Charlemagne's sword was called "Joyeuse." Thus arrayed, he began a miscellaneous tour which included Naples, Picardy, Babylon, Scotland, and Italy, in that order of sequence. Reaching an enchanted forest where

> . . . that cunning snake he found
> That putteth one ear to the ground,
> And in the other without fail
> He sticketh the end of his tail,
> And so he heareth not the charm
> That wizards shouten to his harm,
> And though he is not really deaf
> He heeds not what that wizard saith.

(I have not preserved the sham antique spelling.)

The Soldan, quite worn out, sits down upon a stone and prays to Mahound, Abadone, and Termagaunt, who reply by turning the stone into a soft cushion for his benefit. Curzon found this "miracle" in the life of St. Fiacre, as told in Caxton's "Golden Legend." That saint's day is August 30. Having rested, the Soldan pursues his way, and sees sitting beside a pool a boy of seven on whose wrist there perches a purple falcon. The King decides to take the bird and to eat the child, but the boy, with all the unreasonableness of his age and sex, objects, and, tossing the falcon into the air, seizes a bulrush and bids the knight "Come on." He adds that he is Virgil, the enchanter. They fight, and the "child of evil" disappears in a vapor as dense as a London fog, leaving behind him an odor of which the badness is minutely described:

> And in the Cappadocie tongue,
> The good King to the falcon sung,
> Ah vilaine bete te rotirai,
> Meaning, sweet bird come down, I pray.
>
> Now what he sung that falcon knew,
> And straightway downwards he flew,
> So turning with a certain twist,
> He perched upon the good King's wrist.

The "good King" thereupon wrung the neck of the bird and stuffed the dead body into a convenient pocket, and so returned home to marry Cicely. At the marriage feast,

> The tables with their burthens groaned,
> And as the tankard passed around,
> First was the heathen proverb heard,
> That, Virtue is its own reward.

So ends the "Lay of the Purple Falcon," the clever pastiche of two clever men who were not afraid of a little harmless nonsense. WILLIAM E. A. AXON.

Correspondence

WHAT CUBA NEEDS.

TO THE EDITOR OF THE NATION:

SIR: To judge by the New York papers, last month's elections in Cuba appear to have been regarded by the American people with a surprise bordering on amazement. They passed off in an almost Sabbatical calm; the issue has been accepted by the defeated party, not, indeed, without much grumbling and protestations, but still without any overt acts of rebellion; and the President-elect is a gentleman who, in character and position and training, stands as far above the ordinary run of Cuban politicians as Mr. Woodrow Wilson is above the ordinary run of American politicians.

But mingling with their very just bewilderment there is also, I should judge, a sincere satisfaction among Americans that Cuba has emerged so well from its ordeal, that the republic has received a new lease of life, and that a President has been elected, with every promise of conducting a strong, honest, and economical administration. In all the comments I have read in the American papers I have encountered nothing but a spirit of warm and deserved friendliness to Gen. Menocal personally, and of confidence in the character and success of his approaching Presidency.

Looking at the question merely as a detached Englishman, who knows America, and has twice visited Cuba, it seems to me that Cuban-American relations need something more tangible than mere expressions of good-will and an indefinite though valuable atmosphere of benevolence. If they are ever to be put on a really satisfactory footing, it is essential, so far as I can see, that the interpretation to be placed upon the Platt amendment, as well as the administrative arrangements at Washington for dealing with Cuban questions, should receive a permanent form.

I doubt whether many Americans realize the extreme incoherency of the present state of affairs. Under the Platt amendment, the United States retains the right to intervene for the purpose, to put it broadly, of warding off two calamities—anarchy and bankruptcy. But any one who has been at all behind the scenes of Cuban politics and administration knows perfectly well that the supervision actually exercised goes far beyond the terms of the formal compact between the island and the United States and is frequently enforced in matters that exclusively concern the Cubans themselves. In this way the Cuban Administration is largely deprived of the moral authority that every Government ought to possess, and the political inexperience which it is the sincere wish, I believe, of the American people to remove, is really perpetuated.

The fact is, the Cubans never quite know where they are, or with whom they are dealing. One day the American Minister at Havana receives instructions from the State Department; the next day he may receive contradictory instructions from the War Department or the President or the Insular Bureau; and on the day following he may have all the appearance of acting simply on his own impulses. A habit of meddling with the details of Cuban Administration and of hampering and hauling up Cuban Cabinet Ministers in the discharge of the ordinary functions of government, has thus grown up, greatly to the resentment of the rulers of the island and to the serious impairment of whatever sense of responsibility they may possess.

The Cubans believe that this prying and inquisitorial form of supervision has become customary, without the knowledge either of the American nation or of the American Congress. Being naturally a suspicious people, they look upon it as the forerunner of intervention, or, at any rate, of a concerted attempt to govern Cuba without the bother and expense of a formal occupation of the island. They have persuaded themselves that there are certain officials in the Washington departments and certain surreptitious "interests" that are conspiring against their independence; and they point out, as they well may, that Senator Root, when he was Secretary of War, expressly and officially declared that the Platt amendment was "not synonymous with intermeddling or interference with the affairs of the Cuban Government, but the formal action of the Government of the United States, based upon just and substantial grounds."

There is another aspect of this question that well deserves attention. The highly elastic interpretation placed by the authorities at Washington upon the Platt amendment encourages every concession-hunter who has been disappointed of his prize, every contractor whose bills are disputed at Havana, every promoter or financier who has any sort of grievance against the Cuban Government, to appeal to the United States for the exercise of diplomatic pressure on his behalf. I read only yesterday in the London *Times* of an extraordinary instance of this character, an instance in which an English railway company operating in Cuba has induced the British Foreign Office to protest at Washington against a railway concession granted by the Cuban Government to an American company, and has invoked the Platt amendment to justify its protest.

With things as they are, it is the merest gallantry to speak of the Cubans as a self-governing people. There is no degree of interference with their domestic concerns, which the Platt amendment cannot be, and has not been, stretched to cover—and, to the best of my judgment, illegitimately stretched; and, in the absence of any great or well-informed public or Congressional interest in Cuba, it is, I think, an undoubted fact that subordinate officials at Washington have at times been more zealous than discreet in their dealings with the Cuban Government, and that notes, warnings, remonstrances, have rained upon the authorities in Havana with excessive and exasperating prodigality.

All this is obviously unsatisfactory. To an outsider, it looks as though the Republicans had fallen into a careless and mechanical way of dealing with Cuban affairs. But, with the advent of a new President in the United States, of a broader and more statesmanlike vision, and with an unfettered way of looking at things, and with the simultaneous election in Cuba of a President of high character and intent on furnishing an orderly and economical Administration, there seems no reason why Cuban-American relations should not be placed on a far more definite and wholesome basis. SYDNEY BROOKS.

THOROUGHNESS.

TO THE EDITOR OF THE NATION:

SIR: Your editorial on "Thoroughness in College" (December 12) reminds me that when I was a student, nearly fifty years ago, the seniors, before receiving a certificate of qualification for graduation, were examined on all the subjects pursued during the preceding three and a half years. It was probably the general custom throughout the country at that time. Some of the "fellows" found a good deal of fault with the way the examinations were conducted by one or two of the professors, but I do not recall that anybody objected to the examinations *per se*. For instance, our class was almost unanimous in declaring that we ought not to be expected to give *verbatim* the arguments at the head of the chapters in Paley's "Evidences" and in Butler's "Analogy." I am however, quite sure that some of the members were able to do so.

Why should a student who has been reading Latin and Greek and mathematics almost uninterruptedly for three or four years demur to an examination in these branches? If he has read two or three dramas of Sophocles or of Euripides, he ought to be able to make a fair showing even on an unconned selection from the same author, barring, of course, the choruses. Such an examination would be a terror only to the student who had got his lessons merely for the sake of the recitation, and not for the purpose of acquiring a permanent mental possession. Some of our "boys" resorted to all manner of devices to get through; but a considerable proportion met the test squarely. Perhaps it will be found, after all, that there were some features of the college curriculum of former days which should not have been discarded.

Although I always keep in mind the injunction: "Say thou not, What is the cause that the former days were better than these? for thou dost not inquire wisely concerning this," I am constrained to believe, when comparing the impression my fellow students have left upon my mind with my later observations, that they were better educated than their successors of the twentieth century, though they were probably not in possession of so much miscellaneous information.

As a codicil to the above communication I will add some German statistics recently published, bearing on the cost of going to college. They will be interesting for comparison with those upon which you offer some comments. The ordinary expenses of the Prussian universities from 1868 to 1911 increased from 3,935,449 marks to 21,009,488 marks. The extraordinary expenses, of course, varied a good deal from year to year, but the total for this period amounted to nearly 119,000,000 marks. In the same period, the number of students increased from 7,338 to 27,913. In 1868 the expenses of the individual student were 536 marks. By 1896 they had risen to 872 marks. They then fell to 802 marks in 1905. In 1908 they were 785 marks, and in 1911, 755 marks.

THE LOEB CLASSICS.

TO THE EDITOR OF THE NATION:

SIR: In Mr. Bradford's letter this week to the *Nation* in regard to the Loeb Classical Library there are two assumptions: First, that these translations are intended only for those who have fortunately retained a reading knowledge of the classics. On the contrary, as Mr. Loeb expressly says in his introduction, they are also for "those who know neither Greek nor Latin, and yet desire to reap the fruits of ancient genius and wisdom." For this latter class, and, in my opinion, for all readers, it is incumbent upon the translators to reflect, as far as is consistent with idiomatic English, both the style and the flavor of antiquity.

Mr. Bradford further assumes that all verse translation "necessarily distorts the literal meaning to an extreme degree." This, I submit, is not necessarily the case. Some verse translations are as close to the original as the most painfully literal prose. Others, like the greater part of B. B. Rogers's admirable translations of Aristophanes, approximate very nearly. Certainly in the dialogue parts, at least, and often elsewhere, Mr. Rogers gives, as a net result, to the English reader a far truer conception of the sparkling original than has yet been conveyed by bald word-for-word translations. A fine prose translation of Aristophanes is still a desideratum, and this the editors of the series, following their policy of issuing translations either in prose or verse, according to specific circumstances, will probably give to the public in due time.

Mr. Gilbert Murray's beautiful English poetry, built up on Euripides, is openly a paraphrase. Each avowed translation, whether in prose or in verse, should be judged on its own merits of accuracy and of style in reference to its original.

Literature

THE HEART OF RELIGION.

The Meaning of God in Human Experience. By William Ernest Hocking. New Haven: Yale University Press. $3 net.

On finishing this book one feels in so many different ways about it at the same time that it is difficult to make any of them articulate. The most marked impression left by the book is, perhaps, its massiveness. Not only does it contain 578 large pages, but every page bears evidence of years of patient study and thought, and every chapter brings one face to face with some of the great problems of psychology, philosophy, or theology. Even the style has a certain massive quality; with its occasional omission of verb or subject reminding one of Carlyle, and possessing much of his force—and at times much of his obscurity. The book is both very interesting and somewhat disappointing. By demonstrating very clearly and admirably the failure of most other philosophies of religion, it seems to promise—and evidently means to promise—a really satisfactory solution of the great questions of theology. Thus it keeps one almost to the end in a state of expectancy. And the strange part of it is that the author evidently feels he has kept all his promises, whereas the reader on closing the book finds that he has to return to about the same old world from which he started.

After an introductory section on the nature of religion, we come upon an admirable discussion of feeling and thought, which occupies all the ten chapters of part ii, and includes some admirable criticism of Bergson, James Höffding, and other contemporary writers. Our author fully recognizes the importance of feeling in religion, but points out that feeling is essentially unstable and is ever seeking rest and completion and guidance in some idea. Religion, indeed, is not theology, but it *means to be true*, and without this serious idea-content which is literally meant, all its feeling-content and everything else about it would vanish away.

Ideas, then (in religion and elsewhere), have a certain independence and a certain value of their own. "The child, the savage, and no doubt also the cray-fish, the sponge, the polyp, if they are idea-builders at all, have an interest in their world which we must call 'purely theoretical.'" And it is this purely theoretical interest in reality-as-such that is at the root of most of our interest in things. This interest or "apperceptive mass," this idea of the real-in-general with which one meets and values each new experience, our author calls one's "whole-idea." And "all valuing (and so all feeling) is a way of knowing objects with one's whole-idea. In some way, in valuing, appreciating, enjoying, we are using this idea-mass." "Of all ideas the idea of reality is most of all thought with. . . . With our reality-idea we think not only reality itself, but also, so far as we are able, every particular object of experience." Thus, both in our feeling and in our thinking and even in our perception, there is forever involved the thought of the real as such, or as a whole.

What is this ultimate reality which is involved in all our experience? Is it perhaps the Absolute or God? Before coming to close quarters with this question our author asks us what sort of a world we should like if we could have it for the asking. This question he discusses in three chapters, of which the third, on The Need of a God, is particularly interesting. What we most need is some way of transmuting our evil into some kind of good. The only thing that ever does that in this world is companionship. But human companionship transmutes our evil only in so far as we give a pledge to Fortune; and through the loss of the loved one still deeper sorrow may result than that from which his comradeship had raised us. Hence only something outside the field of human association can afford sufficient armor against these greatest evils:

> It must be another than any finite self, something which reflects upon and in its reflection includes all finite selves and their circumstances, something, nevertheless, with which any finite self may become associated in some infallible manner. This seems to me the point in which a God becomes necessary. In God we have the notion of an Other-than-all-men, and an Other whose relation to me is not subject to evil through its own defect; one from whom, therefore, I can anticipate no pain that must refer me to still another for its transmuting. It is not the power of God; it is not God as miracle-worker; it is not even God as vindi-

> ator, it is, rather, God as intimate, infallible associate, present in all experience as that by which I, too, may firmly conceive that experience from the outside. It is God in this personal relation that alone is capable of establishing human peace of mind, and thereby human happiness.

We come now upon the core of the whole argument, namely, in part iv, How Men Know God. "The original source of the knowledge of God is an experience which might be described as an experience of not being alone in knowing the world, and especially the world of Nature." Nature, or the physical world, we experience as other than ourselves and as being the common object of us and of our social fellows. We are directly conscious of our social fellows, but conscious of them only because we have this common object. In fact, it is in physical objects that we see our fellows; selves are manifested to us only through such objects. Physical nature, as a whole, moreover, has a certain independence of all of us and, in fact, is creative of us and of our thought. And "my dependence upon Nature, my momentary submission to this independent, obstinate, objective decision of what Fact and Truth shall be, both in principle and in detail—is not this a finding of my own mind? It is here, in this momentary (as well as permanent) creation of my Self that I begin, I say, to find Nature taking on the aspect of an Other Mind. For if the full-fledged otherness of that which is thus over against me cannot be doubted, neither can it be doubted that this which so immediately becomes Self, makes Self, is already a Self even in its otherness—namely, an Other Self."

There is something in this proof of God's existence calculated to take away one's breath. The reader feels that the most important part of the performance must have gone on behind the scenes. One thought one was confronted with physical nature, and lo! suddenly God is present. And the rather provoking part of it is that the author writes as if his readers had been behind the scenes with him and had understood as well as he does how it all was done. Not that he is really inconsiderate in the matter. In the two following chapters he goes back and expounds his proof at length. His method of demonstration is a serious attempt to revive the ontological argument, which he regards as the only trustworthy proof of God's existence. But in spite of the new terms in which he puts it, most of his readers will feel but little more convinced than after listening to St. Anselm or Descartes.

The last two parts of the book deal with mysticism and worship, revelation and inspiration. Professor Hocking has studied the mystics not only with care, but with great sympathy, and his treatment of worship is particularly helpful. The student of the psychology of religion will find much of value in these last sections.

But the book is meant not for the psychologist chiefly, but for the human being, in a large sense, who is reflecting seriously over the problems of nature and destiny. And though such a reader may not be convinced of the tenability of our author's proof of the existence of God, he will find a large and noble conception of religion, its place in human life, and the validity of its various expressions, which will make the book of real philosophical and human worth.

CURRENT FICTION.

[PROVINCIAL COMEDY.]

Mrs. Ames. By E. F. Benson. New York: Doubleday, Page & Co.

A Bachelor Comedy. By J. E. Buckrose. New York: George H Doran Co.

A Romance of Billy-Goat Hill. By Alice Hegan Rice. New York: The Century Co.

Mr. Benson has won his share of applause in the past by the exercise of a mildly satirical humor. In one or two of the later stories his nonchalance of the expert entertainer has approached the point of insolence. He has appeared to think it hardly worth while to exert himself beyond the minimum, and some of his readers, who have paid him the compliment of expecting his best, may have feared that it was all over with him. But in "Mrs. Ames" he has actually done what we expected of him. It is more spontaneous, richer in humor, more finished, than any of its predecessors. Its setting is that of the majority of novels now being written by Londoners, the provincial or suburban town. Suburban is the better word for Mr. Benson's "Riseborough": its point of view and its manners are considerably more aware of the urban standard than those of, say, the Five Towns. But the urbanity of your suburbs is only skin-deep; in its real being it is often more provincial than the provinces. Our Mrs. Ames is the wife of a retired major, and her right to queen it over Riseborough society is the right of a gentlewoman who would not find herself abashed in the presence of any sort of royalty. But her realm is a narrow one, and is therefore the more readily to be focused under a ray of humor. Major Ames himself has his club, not without its comforts and elegances, where with other worthy gentlemen (chiefly retired also) he is at liberty to do what city clubmen do. But the group is small, and the same ten men in the same ten chairs will be hard put to it, in time, for objects of interest. The ladies of Mrs. Ames's court are similarly restricted, and for men and women alike the one unfailing and inexhaustible amusement is gossip. Mrs. Ames and her major are above the more pusillanimous moves of the game. The real experts are the Althams, an inimitable pair, who play the part of chorus in the little drama.

"A Bachelor's Comedy" is not an improvement on "Down Our Street," or even on "Love in a Little Town." No Mrs. Bean adorns the pages of this narrative; there are comic figures as broad, but not even approximately as deep. This is romance rather than comedy, and romance in attenuated form. The bachelor is a young parson, promoted from a London curacy to a country living. With the heart of an undergraduate, he aspires to the dignity of a bishop. He finds his hands full at Gaythorpe-on-the-Marsh, not so much of clerical duties as of personal problems, prominent among which is the duty of subduing his curls and other secular attributes to the requirements of the cloth. There is a friendly county family in the neighborhood, and in it a fair Miss Elizabeth, whose destiny is clear from the moment of her appearance on page 32. Now, of course, true love cannot be permitted to have everything its own way, but it does seem as if, in this year of grace, certain ancient obstacles which are still permitted to moulder in true love's path might be cleared out of the way. Such is the obstacle here. The parson loves Elizabeth and knows that Elizabeth loves him. In fact, he has half-proposed to her. But he promises his rival, if he will give up drink, not to say anything more till a certain date. The rival also is to keep silence; but, of course, he doesn't, and of course the girl accepts him to please her family, and fails to marry him (though she is not left ignorant of the parson's feeling) only through an accident. The theory is that the parson is noble for deserting his Elizabeth in order to reform the rival, and that she is noble because she is ready to marry one man when she loves another.

The plot of Mrs. Rice's new story hinges upon a similar device. Miss Lady (who is much like Mrs. Buckrose's Elizabeth, who is strikingly like all other heroines of this type of romantic comedy) has exchanged vows, or their equivalent, with Don Morley, a young scapegrace who promises to reform for her sake. That night fate and Mrs. Rice involve him in a tavern brawl. A man is shot, and Morley, for reasons nowhere explained, disappears. Suspicion naturally falls upon him. Miss Lady doesn't believe him guilty, but her father does, and she promises him, as he sets out on a few days' journey, that she will not see Morley or read his letters till the father's return. The father is killed in a railway accident on his way back. Therefore he does not return; therefore, when a letter presently comes from Morley, Miss Lady burns it unread, and marries a stage professor twice her age, who thinks of nothing but his books, but is fortunately delicate, and thus ready for elimination at the moment when Morley's legal acquittal and début as a "best-seller" leave him and Miss Lady free to enjoy life together according to the original plan. What procures his acquittal is the timely curing of a dumb boy who has witnessed the crime! There are humorous figures in the story, and if no Mrs. Wiggs, at least a Myrtella who is not unworthy to move in the Wiggsian circle. But why all this melodrama?

George Helm. By David Graham Phillips. New York: D. Appleton & Co.

This is another posthumous story of a writer whose industry kept him always years ahead of the press; and it is much better than most of the stories by Mr. Phillips which have been printed since his death—a very fair example of his work. It reveals his habitual reverence for the uncouth strong man of the people, and his habitual, uneasy contempt for "society" in all its manifestations. Of course, the uncouth strong man marries the spoiled child of society, and reforms her.

George Helm is a tall, awkward young man who makes his way from a farm to an Ohio town, equipped with a Prince Albert coat and a red beard. He becomes a town butt, and his beard brings about a facetious nomination for circuit judge. The day after his nomination he shaves off the beard and reveals a strong, intellectual face; campaigns in earnest, and is only defeated by dishonesty at the polls. From that time on success is assured—at least to the eye of the experienced reader. Indeed, it is only a year or two before he is chosen Governor of the State. This happens against the wishes of both parties, which are in league to defraud The People, and are under the thumb of an oligarchy, one of the most rascally chiefs whereof is father to the haughty but amenable damsel who is destined to be Mrs. Helm. All the well-bred persons in the story (the novelist says they are well-bred) are haughty and rascally; but this the readers of Mr. Phillips's other novels will not take to be a special reflection upon the aristocracy of Ohio.

The Honourable Mrs. Garry. By Mrs. Henry de la Pasture (Lady Clifford). New York: E. P. Dutton & Co.

Mrs. de la Pasture seems definitely to have outgrown her earlier manner. The innocent and clinging maiden no longer marries the baronet old enough to be her father. Sentiment no longer bathes the scene in rosy light. We fear that not a few of the gentle readers who so warmly greeted the writer of "sweet-pretty" stories must now be wondering if their trust has been altogether justified.

The Honourable Mrs. Garry is the Erica Clow of "Master Christopher." That narrative, it will be recalled, left her betrothed to the wealthy but sottish Christopher Thorverton. He is clearly capable of salvation, and his devotion to Erica is by no means ignoble. She, however, has accepted him purely for his money. She is the feminine worshipper of luxury who will pay any price, within the bounds of a legal relation, to get what she wants. Without experience of love, she is far more strongly attracted to several men than to her promised husband. One of them, Tom Garry, eldest son of an impecunious Irish peer, loves her deeply. On the eve of marriage Christopher hears her tell Garry that she prefers him, but is determined to marry Christopher. Christopher throws her over, she appeals to Garry, and he marries her at once. The substance of the present story lies in Garry's gradual discovery that his wife is anything but the noble character he has imagined her. She, for her part, makes an attempt to live up to his theory of her; but she is incapable of exertion in the interest of others, and when accident cuts off his life he has already lost interest in it. Another good-natured young aristocrat stands ready to fill poor Tom Garry's shoes—a far less intelligent and far wealthier man. Meanwhile there is emerging a more dominant figure—that of a brilliant and cynical Jew who, understanding Erica, is yet desirous of her. We perceive that the bride of poor Lord Finguar is not likely to find her relation with him the final experience. A third story dealing with Erica is promised.

THE AFRICAN REPUBLIC.

The Union of South Africa: With Chapters on Rhodesia and the Native Territories of the High Commission. By W. Basil Worsfold. Boston: Little, Brown & Co. $3 net.

Mr. Worsfold, who was editor of the *Johannesburg Star* in 1904-5, and who since then has written several books on South Africa, has put forth in the present volume one of the best representatives of the All Red series. It is more comprehensive and serviceable than any book of its kind. The material has been collected with care, and the story is told with great clearness.

The book is divided into five sections. In the first Mr. Worsfold describes the physical characteristics of the vast stretch of country south of the Zambesi, the native races and the Semitic occupations; and recounts the history of European colonization, giving special attention to the rule of the Dutch East India Company and to the permanent British rule in Cape Colony and Natal in the period from 1806 to 1910. One of the most valuable chapters in this first section, and one of the most informing in the book, is that in which Mr. Worsfold traces the various native policies of the British Government. More than four and a half million natives are now within the confines of the Union and under its control; while the responsibilities of the Imperial Government have gradually been reduced since 1884-85—the year of the Bechuanaland occupation—until to-day it has not more than a million and a quarter natives under its supervision, including those in Basutoland, Swaziland, and Bechuanaland, as well as those in southern Rhodesia, which is not in the Union and is administered by the Chartered Company. Mr. Worsfold realizes that the native problem was not settled by the Union; but he is convinced that the task of the Union Government must be lightened by having inherited the honorable traditions of the British Government.

In the second section of his book Mr. Worsfold briefly sketches the movements and the influences that brought about the Union, and describes the new governments—the Union Government and the provincial administrations—and the financial and administrative reorganization that followed the Union. A sketch is also included of the Supreme Court of South Africa, which was created at the Union. The author's genius for clear statement serves him admirably in these chapters, and in particular where he is concerned with the differences between the power of the governor-general and the power of the governor-general-in-council. The quite important difference in these powers is not peculiar to the Constitution of the Union of South Africa. It is more or less common to the Constitutions of all the oversea dominions; and a realization of the difference as defined by Mr. Worsfold will help to end the misconception in this country as to the actual power—much less than is commonly supposed—of the governor-general at Ottawa. In describing the relations of the native population to the Union Parliament, Mr. Worsfold shows that it is only in Cape Colony that natives exercise the parliamentary franchise. Members of the first Senate, that which came into existence in 1910—whether nominated or elected—hold office for ten years; and precautions were taken that the native population of Natal, the Transvaal, and the Orange Free State should not be completely ignored. One-half of the nominated Senators from each province, it is provided, must be selected mainly on the ground of their thorough acquaintance with the reasonable wants and wishes of the colored races. Mr. Worsfold regards this as a useful, if limited, effort to provide for the special legislative requirements of the colored as distinct from the European population. It is a case of virtual representation—the kind of representation that non-electors in England before 1832 were told was substantially as serviceable as direct representation. It was not of much value to the large unrepresented cities of England in the period between the American Revolution and the Reform Act. Time will show whether this indirect representation will be of real value to the native populations of these three provinces which have always resolutely refused to follow the example of Cape Colony and give the natives direct representation in Parliament.

Rhodesia and the native territories under the administration of the High Commissioners are described in the third section. Mr. Worsfold quotes figures in regard to population and mining and trade which seem to warrant hopefulness. Rhodesia, he shows, has benefited from the experience of the older South African colonies, and, unlike the other provinces, except perhaps Natal, has no complications of nationality. The Dutch-Africanders who have settled in Rhodesia have identified themselves in sentiment, language, and manner of life with their more numerous British neighbors. There are no racial conflicts there; no difficulties about language or bi-lingual schools; and English is the only language used in politics, in business, and in social intercourse. The people of Rhodesia pride themselves on their freedom from the bi-lingual incubus; and Mr. Worsfold is convinced that Rhodesia will not seek admission to the Union so long as union involves a sacrifice of her immunity from race conflicts or a diminution of her administrative efficiency.

Chapters on labor supply, on railways and telegraphs, on the mines at Kimberley, at Johannesburg, and in Rhodesia; on agriculture and stock raising, and on trade and commerce, almost encyclopædic in their detail, form the fifth part of this book. They constitute the best survey of industrial and economic conditions in South Africa that has been published since the war. In the concluding chapters on political and social conditions, Mr. Worsfold is outspoken in his comparison of South Africa with Canada, with Australia, and with New Zealand as a field for British immigration. He concedes what has long been understood by observers of all four of the oversea dominions, that South Africa does not present the field for emigrants that is offered by the other three dominions, and in particular by Canada. The native races, from which all manual labor is drawn, and the high cost of living, exclude British unskilled labor, and the demand for mechanics and clerks is small. Prices are not so high as they were during the war and in the years immediately following. They have been coming down to an appreciable extent the past few years, but three hundred pounds a year is still regarded as only a living wage for an English artisan with a family in Johannesburg.

Men, Women, and Minxes. By Mrs. Andrew Lang. New York: Longmans, Green & Co. $1.25 net.

This book was in the press at the time of Mr. Lang's death. He had helped choose the contents, and had furnished a prefatory note to the effect that "anecdotes and entertainment, rather than severe speculations, historical and social, are the *farrago libelli*—the burden of the book." It is a selection from papers contributed by Mrs. Lang, during the past quarter-century, to various English periodicals—fresh material, therefore, to most American readers. The table of contents suggests a range of interests such as we have been wont to associate with the name Lang. Nearly half of these papers, to be sure, deal with eighteenth-century manners, English, French, and Scottish. Madame de Genlis is sketched as "A Poseuse of the Eighteenth Century," Grimm as "A Paris Correspondent of 1753"; and there are papers on Rousseau and the Baron de Frénilly. British society in the eighteenth century is studied under such titles as "Morals and Manners in Richardson," "The Home-Life of the Verneys," and "Records of a Scotch Family." A number of these articles appeared originally as reviews, of that leisurely English species which is not even yet obsolete in its native habitat. Mrs. Lang has an instinct for the quaintnesses of past fashions and manners, and a shrewd humor in recording them which has a tang of its own.

The essay on morals and manners as painted by Richardson is particularly good. His ignorance of the manners of good society was, she asserts, gross enough to justify the complaints of Lady Mary Wortley Montagu and Lord Chesterfield. "But the blame lies not in Richardson's want of knowledge of what he never had the opportunity of acquiring, but in the fact that he did not confine his stories to the condition of life of which his personal experience qualified him to speak." Making all possible allowance for his initial mistake in attempting the thing at all, his blunders remain almost incredible. Sir Charles Grandison is an intelligible monster; for all Richardson's men are monsters, at one end or the other of the moral scale. Women he knew. Of Clarissa Mrs. Lang says: "One marvels how a man who could have conceived her in her single-minded simplicity could have likewise painted the embodiment of self-conscious swagger that goes by the name of Mr. B., or the galvanized puppet that struts to and fro upon earth under the title of Sir Charles Grandison." But this man's knowledge of the female heart did not entail familiarity with feminine manners above the social rank of a Pamela. To Clarissa and his other damsels of supposed breeding he ascribed a degree of independence such as is hardly the portion of the well-born British maiden, even in this emancipated day. At eighteen Clarissa is an heiress in full command of a fortune. She oversees her own estate, has always about her a hundred guineas or so of pocket-money, and spends extravagant sums on dress, even from the modern point of view. She pays and receives visits without benefit of chaperon, travels alone—outdoes, in short, the modern American girl in her own particular field of distinction. No wonder that sensitive spirit, Lady Mary Wortley, was outraged at this kind of misrepresentation.

An intimate quality marks these papers as a whole, and a number of them are familiar essays without disguise. "Trials of the Wife of a Literary Man," "Art in Country Inns and Lodging-Houses," "Poets as Landscape Painters," and "Other People's Friends," are all amusing in their kind.

Americans and Others. By Agnes Repplier. Boston: Houghton Mifflin Co. $1.10 net.

These essays on various aspects of contemporary manners contain something of that dry and clarified sweetness and light which we find in the letters of Dr. Johnson's lady friends, and which might be explained as the product of Georgian classicism and feminine finesse. They preserve the mean of a cultivated drawing-room style: they are neat without primness, witty without paradox, satirical without malice, and serious without lapsing into homily. They are well nourished with select reading, intelligent travel, and shrewd observation of men and women.

If we should hint a defect, there is a trace here and there of the professional essayist's "anthologizing" habit. The true child of the tribe of Montaigne always appears to be writing because he has read and observed; the professional essayist appears to be reading and observing because he is to write. The one seems to offer the fruits of experience and the image of a man; the other seems to offer the fruits of browsing and a cento from the five-foot shelf. The American school of "informal essayists" is deeply tainted by this pestilent habit, and there is—oh, just a suspicion of it in the essays of Miss Repplier. When we have said that, we have said enough; for there is really a distinct and decisive character—if not much "temperament"—informing these pleasant discourses. They advocate, for example, and exemplify the tactful application of common sense to the conduct of life. They reveal throughout a disciplined serenity of temper which one associates with certain fine gentlewomen of the previous generation, and, in the present generation, as the acidulous Hazlitt would say, with certain fine serving-women from Virginia.

The defect in American humor, says Miss Repplier, comparing our comic spirit with that of Molière and Carlyle, is that "it lacks, for the most part, a logical basis and the dignity of a supreme aim." Her own humor has perhaps no very solid logical core, but it reposes securely enough upon a clear and just conception of good breeding. For penetrating moral sense and an almost Johnsonian pungency of expression we commend her exposure of the fallacy underlying the romantic coupling of rudeness with sincerity in a Question of Politeness: "A man may be cruelly candid to his associates, and a cowardly hypocrite himself. . . . He may wound the pride and hurt the feelings of all with whom he comes in contact, and never give his own soul the benefit of one good knockdown blow." Nothing could be more gently and at the same time persuasively satirical than the circular series of letters without comment, in which she shows how American society women discharge the burden of charity. Original, too, and happy in conception is her essay on Goodness and Gayety, depending on the question, "Can surly virtue hope to find a friend?" and stuffed with proofs that even sanctity and wit should lie down together—proof drawn from the writings of saints, popes, and church fathers. And what in this heyday of neurasthenia could be more wholesome and more timely than her quotation from Marcus Aurelius at the close of her bantering paper on The Nervous Strain?—"Take pleasure in one thing and rest in it, passing from one social act to another, thinking of God." This is her antidote to the advice of comfortable doctors to comfortable ladies in comfortable homes, "to avoid the strain of anything and everything which makes the game of life worth living."

Napoleon's Last Campaign in Germany, 1813. By F. Loraine Petre. New York: John Lane Co. $3 net.

The author of this volume has succeeded in telling clearly and accurately the details of one of the most confused and complicated campaigns in history. He has gathered his information from Napoleon's own dispatches, from the memoirs of eye-witnesses and participants, and from the best recent secondary authorities in French and German. He writes as a military critic rather than as a political historian; and he can make a striking comparison of what Napoleon did in 1813 with what the Japanese did in the war against Russia, or with what he happened to see in the French manœuvres last summer He is at great pains to give the precise figures of the numbers engaged and the detailed action of different corps or battalions. He has a keen eye for the military possibilities of different kinds of ground, and, like Carlyle, describes many of his battlefields after having tramped over them himself. In his detailed, though crudely executed, maps it is always easy to follow the narrative of his text.

In analyzing Napoleon's movements in 1813, Mr. Petre has the advantage of ripeness of judgment due to his having already studied carefully Napoleon's earlier campaigns. In two previous volumes on Napoleon's conquest of Prussia and of Poland in 1806-7, he was dealing with the Emperor at the culminating point of his military genius; in a volume on the campaign of 1809 he showed how the great master was failing to live up to his wonderful previous record. In this volume on the campaign of 1813 he finds that "it is only at times that the flame of Napoleon's genius burns with its old vigor." Time after time Napoleon seemed to lose sight of the real objective and to hanker after the occupation of mere geographical points, the attainment of which would inevitably have followed on success in the true objective—the decisive defeat of the enemy's main army. He pictures Napoleon sitting at Düben in doubt and uncertainty in a way which can hardly be imagined of the conqueror of Ulm, of Austerlitz, and of Jena. He recalls how the news of a French division defeat threw Napoleon into such childish temper that he discharged his pistol at a cur which ran out and barked at him, and when he missed fire he hurled the pistol at the dog. But at other times the Emperor evinced an extraordinary equanimity at bad news. He heard of Ney's defeat at Dennewitz with the utmost calm and without a word of reproach for the unfortunate marshal. He laid the defeat to the difficulties of the art of war which he lamented were so little understood. It was in relation to this event he made the curious remark that no great soldier, except Turenne, had ever learned much of war by experience, and that he himself, in the fulness of his experience, had never done anything better than his first campaign in Italy.

But while pointing out that Napoleon did not keep to the extraordinarily high level of genius of his earlier campaigns, Mr. Petre is right and fair in making due allowance for the greater difficulties which he had to meet. For fifteen years his enemies had been learning wisdom and strength from the very lessons which Napoleon had been inflicting upon them. They were beginning to be filled with that wonderful feeling of nationality and patriotism which heretofore had been such a potent force on the side of the French alone. They were now a whole people risen to fight for home and country, instead of regiments of serfs or mercenaries forced to fight for a dynasty. Leaders like Blücher had learned from the master the value of speed in decision and action, and, by rapidly advancing and retreating, clung to the edge of Napoleon's lines with a fatal persistency. Under these new conditions, when Napoleon's front extended in a long line from the Baltic to Bohemia, his centralized system of command broke down. He had to wage war with armies entrusted to his marshals, instead of with a single army of moderate dimensions always controllable by himself; and his marshals did not prove equal to the tasks expected of them. Commanding a unit of the army which the Emperor controlled had not fitted them for independent commands of their own. This danger was aptly summed up in Marmont's prophetic warning, "I fear greatly lest on the day which your Majesty has gained a victory and believe you have won a decisive battle you may learn that you have lost two." Sure enough, a few days after this was written, Napoleon, victorious at Dresden, learned of the disastrous defeats of MacDonald on the Katzbach, of Oudinot at Gross-Beeren, and of Vandamme at Kulm.

Notes

The Index of the *Nation*, July to December, will be printed with the issue of January 2.

Mr. Stephen Phillips has been appointed editor of the *Poetry Review*, the name now given to the journal of the Poetry Society.

Francis Seymour Stevenson is publishing, through Jarrold & Co., "A History of Montenegro."

The best French novel of the year was M. Jacques Morel's "Feuilles Mortes," if we may accept the judgment of the *Vie Heureuse*, which has so awarded the prize.

The opening, a few weeks ago, of an underground "book-store" near the Radcliffe Camera basement to relieve pressure on the Bodleian Library occasioned a considerable flutter at Oxford. There was a numerous gathering of members of Congregation, and Bodley's librarian, Mr. Falconer Madan, explained at length the history of the undertaking and furnished statistics. This storeroom, to which books least in demand have been consigned,

> is about 126 feet long, with an average breadth of 72 feet, and the height of the two floors is 18 feet; it can contain, when filled with iron book-stacks, over a million octavos. At present we have 200 stacks out of 1,500, and the volumes here are about 120,000. There are in the whole library about 1,700,000 separate pieces, but, owing to the old practice of binding several works together, there are not more than about 800,000 volumes as they stand on the shelves. The increase is well over 200 a day from one year's end to another; and this place will last us about twenty-

five years. Then a second will be erected on the other side of the Camera. The cost of the whole building was £12,000. No money had to be spent on site or architecture.

The Nobel Committee of the Norwegian Parliament has just transmitted to the United States and other countries the regulations covering the next award of the Nobel Peace Prize, which is to be made December 10, 1913. Proposals of candidates for the honor must be laid before the Nobel Committee by some duly qualified person before the 1st of February, 1913. This "duly qualified person" may be any of the following: (1) Members and late members of the Nobel Committee of the Norwegian Parliament, as well as the advisers appointed at the Norwegian Nobel Institute; (2) members of Parliament and members of Government of the different states, as well as members of the Interparliamentary Union; (3) members of the International Arbitration Court at The Hague; (4) members of the Commission of the Permanent International Peace Bureau; (5) members and associates of the Institute of International Law; (6) university professors of political science and of law, of history, and of philosophy; and (7) persons who have received the Nobel Peace Prize. The Nobel Peace Prize may also be awarded to an institution or association.

The *American-Scandinavian Review*, a bimonthly publication issued from No. 507 Fifth Avenue, New York, for the purpose of cultivating closer intellectual relations between the people of the United States and those of Denmark, Norway, and Sweden, includes in its first number: Sonnets by Dr. Maurice Francis Egan, American Minister to Denmark, a translation of a short sketch by Strindberg, articles on industrial conditions in Scandinavia, etc.

Between the earlier part of the life of Fanny Burney, described in Miss Constance Hill's "House in St. Martin's Street," and the later part, described in her "Juniper Hall," lies the great episode in the royal palace. This episode Miss Hill has now made the subject of a third volume, "Fanny Burney at the Court of Queen Charlotte" (Lane). Like the earlier volumes, this is composed largely of extracts from Miss Burney's "Diary," with a kind of running comment by the editor. In this case Miss Hill has had the privilege "of studying carefully the seven volumes of the 'Diary and Letters' in the original MS.," from which she has introduced into her account certain cancelled passages, containing "amusing scenes which probably their writer considered too light and trivial to place before the world," and others which "throw light on Fanny's more intimate feelings and sentiments." She has also made use of other contemporary biographies to check or complement Miss Burney's comments on various personages of the court. For those who are frightened by the bulk of the "Diary" itself, we can recommend this pleasant volume heartily, and even those who are at home in the original will find profit in the explanations and additions of the present editor. The book, like its predecessors, is delightfully illustrated with reproductions of contemporary portraits and with drawings by the editor's sister, Miss Ellen G. Hill.

It is, obviously, the coming up again of Irish Home Rule that has led to the publication of "Aspects of Home Rule" (Dutton), by Arthur James Balfour. The volume is made up of selections from his speeches, only one of which is later than 1893. This necessarily gives the volume a somewhat archaic flavor, though it must be confessed that the great debates of the eighties and nineties left little that is new to be discovered later.

Mrs. Talmage has edited the autobiographical sketches left by her husband and has contributed four chapters covering the last few years of his life, in a volume entitled, "T. De Witt Talmage as I Knew Him" (Dutton). It need not be said that the narrative of the final years is told with sympathy and fidelity to fact. The chapters left by Dr. Talmage himself are such as one would expect who had read his sermons and knew the man. It is not strange that such a preacher attracted large audiences and claimed many thousands of constant readers. One would not look to a volume thus composed for an analysis of his limitations.

In "From My Hunting Day-Book" (Doran), by his Imperial and Royal Highness the Crown Prince of the German Empire and of Prussia, translated from the German by J. E. Hodder Williams, the author apologizes needlessly for these sketches as the work of a hand "more skilled in the use of bridle, rifle, and alpenstock than the pen." We have not the German text at hand for comparison, but the few infelicities of expression serious enough to annoy are clearly the work of the translator. The Prince is an enthusiastic sportsman, and the brief chapters here presented bring the joys of the chase to the reader in great variety, ranging from the shooting of grouse and capercailzie in Scotland and the Black Forest, respectively, to elephants in Ceylon and crocodiles, tigers, and wild buffalo in the delta of the Ganges. Though participating with the King of Italy in an ibex "drive," with scores of "beaters" to bring up the game, the Prince does not hesitate to assign a decidedly low rank to this form of the chase as compared with "stalking." The shooting of driven game, he holds, is merely a question of marksmanship, rather in the nature of a shooting exercise than sport. From cover to cover there is no trace of that savage delight in the mere quantity of game killed by which the sporting literature of an earlier day was wont to be marred. In fact, apart from any question of game at all, the chase makes a strong appeal to the spiritual side of his nature. "The great book of nature opens itself willingly and without your asking before the eyes of a true hunter. In the glowing sunrise; in the silence of the midday hour, when tired nature sleeps; in the soft dusk of the evening, spreading its peace over wood and dale; in the wild, shrieking mountain gales; in all these great glories, Nature speaks to us lonely hunters in ever-varying, ever-mighty voice, singing to us the high song of the Creator of all things." The volume is illustrated with about thirty excellent photographs.

The Century Co. has published in book form "Everybody's St. Francis," by Maurice F. Egan, with pictures by Boutet de Monvel. The pictures have the quaint naïveté characteristic of all that artist's work, and those in color are excellently reproduced. There is a certain childishness, too, in Mr. Egan's style, particularly in its enthusiasm for edibles—"lucent sweetmeats," "luscious jellies tinct with cinnamon"—and in its frequent disregard of the ordinary grammatical proprieties, the more interesting on the part of a professor (emeritus) of the English language. So long as Mr. Egan follows the "Fioretti" his narrative runs along well enough—except when he relates (with a correspondingly labelled illustration) how the people of Assisi fed the wolf of Gubbio. But when Mr. Egan essays literary remark or historical comment he moves uncertainly. The first of three references to Dante tells us that he damned Frederick for luxury, the second that he first saw Beatrice in church, and the third that he might never have written in Italian had it not been for the "Canticles of the Sun." And we are informed that "when an enraptured girl elopes at midnight in our day to meet her future husband, nobody but the prudent condemn," whereas "in the Middle Ages even the prudent did not condemn"; and that "Asceticism in the Middle Ages did not imply that nature was evil or the legitimate pleasures of the world evil, but only that the non-ascetic might not become 'fat and scant of breath' when devotion to things higher than nature might be needed." One is relieved to discover that the title, "Everybody's St. Francis," means only that St. Francis was a man who appealed to everybody—not, as might be inferred, that this is a book which everybody ought to own. It is not; it is only the ideal St. Francis for the parlor table.

An interesting addition to the rapidly lengthening list of books for the embryo reporter is Grant Milnor Hyde's "Newspaper Reporting and Correspondence" (Appleton). The volume is the result of the writer's own newspaper experience and of his work as an instructor in journalism at the University of Wisconsin. It does not exploit theories, but presents crisply, yet with fulness of illustration, the business of gathering and writing news as it confronts the beginner. Now and then Mr. Hyde finds himself compelled to write of things as they should be, rather than as he conceives them to be actually. Very few dramatic critics, he believes, are so fortunate as to be able to say exactly what they think about a play. Nevertheless, "for the purpose of a more complete study of the subject," he considers "only dramatic criticism that is not restricted by editorial dictum or by the requirements of paid-space." On such large views is his presentation founded. At the same time, the comprehensiveness of his chapters, coupled with the practical character of the appendices in which he offers suggestions for study and exercises to be corrected, makes the book one of the best texts that have appeared in this new field. His list of "Don'ts" needs revision at the hands of some one who really knows the English language.

"The Indians of the Terraced Houses" (Putnam), by Charles Francis Saunders, falls into the class of "pleasant books" which describe superficially but delightfully the native peoples of the Southwest. It is inferior to Professor Prudden's "On the Great American Plateau" in its scope. The two books, both brought out by the same publisher, cover about the same country.

The appeal is timely "to arrest the disintegration and sure extinction of these little Pueblo republics, an extinction toward which the present well-intentioned but misdirected governmental interference is inevitably tending." In the description of a country where it is necessary to use a large number of Spanish words, it is difficult to understand why the author feels called upon further to encumber his text with many foreign words in other languages.

Mrs. Mabell S. C. Smith attempts to impart "The Spirit of French Letters" (Macmillan), including its political and economic connection with each period, in a volume of 374 pages, of which even the quotations are in English translation. The task is an impossible one: no wonder she has not succeeded. But it is fair to add that, though Mrs. Smith dared too much, "l'audace était belle." The narrative, so necessarily brief, is sensible; the extracts are, on the whole, representative, and the relations of history and literature are intelligently indicated. But seven and a half lines of appreciation can scarcely make the novice understand Sainte-Beuve even if followed by six pages of quotation from an essay. Nor do half a dozen lines apiece enable one to get much idea of Anatole France or Brunetière. The plan of the book demands a setting for the extracts three times as full as the actual one. Even then, in a work entirely in English, one would have the facts, rather than the spirit, of French literature.

Prof. Marion D. Learned's "Guide to the Manuscript Materials relating to American History in the German State Archives" (Washington: Carnegie Institution) adds another to the bibliographical helps with which the Bureau of Historical Research of the Carnegie Institution is gradually equipping the historian. Lack of time has made it necessary to confine the present guide, almost exclusively, to the archives of the several states of the Empire, including Alsace-Lorraine and the Hansa cities of Bremen, Hamburg, and Lübeck; but of these there are upwards of fifty, although eighteen are found in Prussia alone, and ten in Bavaria. The documents, most of which are now for the first time listed in usable form, open a wealthy mine to the student, only a small part of whose riches have hitherto been explored. In addition to a vast array of material, including voluminous lists of names, relating to almost every phase of German emigration to America, one finds virtually complete documentary data for the history of the German troops in this country during the Revolution; the diplomatic negotiations of the Revolutionary period, notably the correspondence between Arthur Lee and Schulenburg, the Minister of Frederick the Great; and the early problems of German-American trade. Included in the survey are the Moravian documents at Herrnhut and in the Grand Ducal Archives at Weimar, and those at Breslau relating to the Schwenkfelders. Only for the Palatinate are the present-day archives seriously lacking in completeness, and that gap is in part supplied by the Palatinate papers preserved in other South German states. An excellent introduction, historical and descriptive, and an index add to the usefulness of this important volume. It is much to be wished that Professor Learned's work may be completed by a survey of the American material in municipal and ecclesiastical repositories.

"Pilgrim Life in the Middle Ages" (Houghton Mifflin) is a title of such promise that the reader's interest is stimulated even before a line be read. Unfortunately, in the present volume, by Sidney Heath, the promise is not well fulfilled. What Mr. Heath has done he has not done badly, though it would be idle to say that the work, even so far as it goes, is marked by any distinction; our complaint is that, with such a field for exploration, the results given us are more meagre than we had a right to expect. What a wealth of material and what possibilities of color such a theme contains the most casual student of mediævalism knows. Only in the history of pilgrimages that survive today, as, for instance, the important though little known one to the shrine of La Trinità, in the mountains of the Abruzzi, is a vast store of interesting matter inviting research. Mr. Heath, however, has dealt in the most perfunctory manner with the pilgrimages of Continental Europe, virtually confining his attention to his native England. Indeed, he does not at any time venture very far beyond the safe and beaten track of the "Canterbury Tales," and the shrine of Beckett looms unduly large in a work bearing so comprehensive a title. As a fairly readable collation of historical data concerning pilgrimage in England, the book would merit moderate praise; under its present title it is wholly inadequate to the subject.

Prof. L. M. Larson, of the University of Illinois, already favorably known to historical specialists by his studies in early Danish history, has added an excellent biography of "Canute the Great" to the Heroes of Nations series (Putnam). "Canute's career is the history of Danish imperialism carried to a swift realization." In England and in Norway, as well as in Denmark and along the southern shores of the Baltic, he achieved what his ancestors had attempted in vain; he built up a great northern empire. The steps in the growth of this empire in the early part of the eleventh century, and the practical statesmanship of its builder. Mr. Larson tells clearly and effectively. He has caught the poetry and imagination of the Sagas, and draws upon them freely, but judiciously, to give life and background to his hero. Canute's age was the interesting and critical period when Christianity had begun to contest with the old Norse gods for supremacy. It was still an age in which the Swedish people gathered every ninth year at Upsala for the great sacrificial feast, at which at least nine human beings were immolated. Christians, however, were released from the duty of attendance at this national festival upon the payment of money. Mr. Larson concludes with a valuable chapter upon Northern culture in the days of Canute the Great, which paves the way for a good discussion of the controversy in regard to the extent of the Scandinavian influence upon early English institutions.

Professor Perrin is to be heartily congratulated on the completion of his annotated translation of "Six of Plutarch's Lives." The third and last volume of the work has just been issued by Scribner. It adds the Nicias and Alcibiades to the Themistocles and Aristides and the Cimon and Pericles; so that the admirer of the prince of biographers and the student of Greek history whose Greek has grown rusty can now read with pleasure and competent guidance Plutarch's revelation and betrayal of the great age of Greece. The charm and accuracy of the translation are as noticeable as the sanity of the introduction and the aptness of the commentary.

Readers of "Beside the Bonnie Brier Bush" do not need to be told the quality of Ian Maclaren's humor. Its intellectual character and its "imperfect sympathies" show how much he is a Scotsman. In the first essay in the present collection, which gives its title to the volume ("Books and Bookmen and Other Essays." Doran) he draws a rather too long comparison between dipsomania and bibliomania, which is nevertheless amusing to the end because of the quiet but hearty enjoyment of the author. That he is himself an incurable bibliomaniac is evident throughout the volume. The malady should have kept him from heading his second essay "Humour: An Analysis." He should have seen that it would arouse too great expectation. Of course one does not sigh for the soul-destroying dissection of the German analyses, but one does look for more than a characterization of the humor of different nations as French wit, English fun, Irish drollery, the American humor of surprise, the solemn ironic waggery or "pawkiness" of the Scotch. This is not analysis at all. Besides, though his comic sense is displayed in the selection of several good stories as illustrations, only the description of Scotch humor is distinguished by penetrating understanding. As a critic, he exhibits similar limitations. In the opening section the glow of sentiment not only lights up his memories of delightful penny-dreadfuls among his childhood favorites, but surrounds with a halo of praise the idols of his mature years. In the essays on Burns and Scott there is little acute thinking anent fundamental characteristics, but a winning enthusiasm for the fine emotional qualities in the work of his fellow-countrymen. His account of the feudalism in Scott's novels and life, his breadth of sympathy in tracing national characteristics in the poetry of Burns, are specimens of generous appreciation. But they are in the strict sense not criticism at all.

Will Carleton, writer of ballads, died on Wednesday of last week in Brooklyn, where he was editor of *Everywhere*, a monthly periodical. His rhymes, written for the most part in colloquial language, were popular some years ago, and were widely circulated. Because of his name as a writer, he was in demand as a lecturer, particularly in the West. In 1871 Carleton published in the Toledo *Blade* "Betsy and I Are Out," which immediately became popular and established his reputation as a writer of dialect verse. Among his works are: "Farm Ballads," "City Ballads," "Rhymes of Our Planet," "The Old Infant, and Similar Stories," and "Songs of Two Centuries." He was born in Hudson, Mich., in 1845.

Brig.-Gen. Theophilus Francis Rodenbough, U. S. A., retired, who was honored for distinguished service during the Civil War, died last week at his home in New York, at the age of seventy-four. He was the author of several books, among them "From Everglade to Cañon with the Second Dragoons," "Afghanistan and the Anglo-Russian Dispute," "Uncle Sam's Medal of Honor," "Autumn Leaves from Family Trees," and "Sabre and Bayonet."

In French restaurants an extra price is always charged for dishes cooked in casseroles or earthenware pots, and they are more than worth the additional quarter. In braising, pot-roasting, stewing, and steaming slow cooking is the secret of success, and for slow cooking the casserole is far superior to metal pans. The earthenware is cheap; it is easily cleaned; there is no danger of metallic contamination; it is good for left-overs and small entrées; valuable for cooking fruits, the acids of which do not harm it; economical, because of its non-conducting qualities, and so on. Fourteen reasons for preferring casseroles are given in her book by Marion H. Neil, who is the principal of the Philadelphia Practical School of Cookery and editor of the *Table Talk Magazine.* The two most important are that it develops the finest flavors of food, and that dishes are served as well as cooked in them, thus retaining their heat till they are ladled out. The author also gives important directions for taking care of the earthenware, and then proceeds to give 230 pages of recipes, for invalids as well as normal persons. There are separate sections for soups, fish, poultry and game, meats, vegetables, puddings, cheese, eggs, cakes, preserves, and salads, these last being only served in earthenware dishes. Far too little attention has heretofore been given in this country to casserole cooking; the adoption of it generally in our kitchens would effect a revolution.

In 1911 Sturgis & Walton published a book of 130 pages, entitled "Soyer's Paper-Bag Cookery," in which the eminent chef, Nicolas Soyer, explained his discovery of a method of preparing food which has since come much into vogue. The bulk of the recipes contained in that little volume have been incorporated in Soyer's new volume, "Standard Cookery," which is a much more comprehensive book (436 pages), with an exceptionally large number of recipes in all branches of the culinary art, and with special sections on Jewish dishes and on viands for invalids. The chapter on hors-d'œuvres is the most comprehensive we know of, special attention being also given to the various "butters" that go with these appetizers. Though of French extraction—a son of the famous Alexis Soyer—Nicolas Soyer has practiced his art chiefly in England, as chef of Brooks's Club. His recipes accordingly partake of an international character, like those in "La Cuisine de tous les Pays" of Urbain-Dubois. The English as well as the French are greater cheese-eaters than we are, and to cheese many pages are devoted. French *raffinement* is displayed on nearly every page. Under "fried eggs," for example, the ordinary American cook will read with astonishment that they should be dealt with one at a time, and that, with a wooden spoon, the yolk should be quickly covered up with the solidified portions of the white in order to keep the former soft. Imagine Bridget taking so much trouble! She might, perhaps, be induced to heed these directions in making an omelet: "Heat the pan until nearly a brown color. This will not only lend an exquisite taste to the omelet, but will be found to insure the perfect setting of the eggs." It is such trifles that insure perfection.

The "Helping Hand Cook Book" will be found useful in any home, but is intended primarily for women who do their own kitchen work, and who, being of moderate means, find it worth while to make profitable use of "left-overs." How these can be converted into palatable dishes it is the main object of the authors to indicate. Menus are given for every day in the year, for each of the three meals, and always the "left-overs" are provided for. This takes up the first 230 pages of the book; the remaining 110 are devoted to recipes of many of the dishes included in the menus, most of them of distinctly American flavor. The subject of beverages is treated gingerly, only two recipes being given—for tea punch and ginger ale.

Judging by diverse classical allusions, Euterpe Craies is not only, as indicated on the title-page of "Recipes from East and West," "certified by the National School of Cookery," but is a college graduate. One of the dishes is given in Greek. It is mentioned in Aristophanes's comedy, "Ecclesiazousæ," in which the women revolt and act very much like our suffragettes. "I dare not give the recipe for this, wishing my readers a long life," says the author. She does, however, give various Greek recipes, as well as some used by Turks and other Eastern epicures. Indeed, for an Englishwoman, this writer betrays a remarkably cosmopolitan taste, Sweden, Holland, and Spain being represented, as well as France and Italy. The roast meat of England will, she thinks, "always be supreme, but fish, vegetables, and farinaceous foods yield more to Eastern skill." She particularly commends the pilafs and mussakas which form the staple diet of the Near East. On grilling and the cooking of birds useful directions are given which will be new to most cooks.

To increase the comfort of those mistresses who employ only one or two maids is the avowed purpose of "The Expert Waitress." It is intended not only for waitresses themselves, but for mistresses who desire to know how a table should be set and served with good taste and good sense, without adhering in all respects to the latest conventions; who wish to know, also, how much can be expected of one domestic assistant. One of the most valuable chapters is on dishwashing; it includes a dozen hints about things usually neglected in the kitchen. There are chapters on what the waitress has to do before and during each meal, afternoon tea, the care of the pantry and of lamps and silverware, etc. Adaptability, a servant's contract, truthfulness, and honesty are other topics discussed.

Dr. John Grimshaw, who describes himself as an industrious plagiarist, has prepared "The People's Medical Guide," and the Macmillan Co. has handsomely printed it. The author says he did this because the publisher urged it, and he himself had many things he wanted to say, besides a large number of note-books and scrap-books to utilize. The result fills about 850 large pages. The sub-title is suggestive as to his methods and purpose. It runs: "Points for the patient, notes for the nurse, matter for the medical adviser, succour for the sufferer, precepts for the public." He might have added that there is poetry for the plodding peruser, much for many, and so on indefinitely. No one of these classes of readers will be quite satisfied with the book, despite its excellencies and the happy treatment of many topics. As a book for the family, it brings much useful information, often well put, but the author goes further afield in some of his discussions than is profitable for the layman. Certain topics, notably the problem of immunity, are hardly made clear enough for the lay mind. Medical men, if they happen to take up the book (and the author often seems to be writing really for them or at them), will find a good deal to arouse objection. In its favor let it be noted that the book contains much matter bearing on social reform, a good discussion of foods and feeding, and many excellent suggestions about the training of children, about nervousness, and so forth. Dr. Grimshaw is no fanatic about tobacco and alcohol, but he sets forth their dangers well and forcibly. He makes the good point that there is a growing aversion to drinking water, because of the very general, and possibly exaggerated, fear of "bugs," and that this leads to the use of other liquids, which are not good substitutes for plain water. The author has British conditions primarily in mind, but we have noticed few places where this will trouble an American reader who desires an entertaining book of this kind.

Prof. William James Vaughn, senior member of the faculty of Vanderbilt University, who had held the chair of mathematics from 1882 to 1895, and the chair of astronomy since the latter year, died at Nashville the early part of last week, aged seventy-eight. He was a graduate of the University of Alabama.

Drama and Music

England has never got over feeling cheated because her greatest literary genius failed to leave more knowledge of his personality behind him. What couldn't the critics do with his plays if Shakespeare's life lay as bare to the public as, say, Goethe's? The moments of Hamlet's despair, of Macbeth's ambition, Romeo's passion would all be pointed with the sting of actuality. No one will deny that much might be learned from Shakespeare's own experience; and even the most careful students of his works have fancied they discovered there at least sidelong glances of himself. They must be there, if the practice of other writers counts for anything. But to admit the existence of his own likeness in the plays is one thing; to pluck it out bodily and hold it up to the gaze of all is quite another. Yet even this Mr. Frank Harris—known for his "The Man Shakespeare" and just now for "The Women of Shakespeare," published by Mitchell Kennerley—has not hesitated to attempt. In the thick of a smart London set, who by their sharp wits are pleasantly making over all philosophy, all religion, and all life, it must have seemed to him like child's play to find out a thing or two about that fellow Shakespeare. The earmarks of child's play are indeed on nearly every page of his latest book.

Just how he reaches the conclusion that the "Dark Lady" is Mary Fitton, and Shakespeare's patron and false friend Lord William Herbert, is of no great importance. Mr. Harris ignores the recent discovery that Mary Fitton was a blonde, as well as the growing difficulty in the way of making Herbert the person designated as "W. H."; and, accepting them for his purpose, finds their broad trail through most of the plays. So Helena, of "All's Well," running after Bertram, and, after she has tricked him into the marriage relation, trying to force him to acknowledge her openly, is Mary in indecent pursuit of the young lord. Poor Helena! Heaven knows Shakespeare himself pitied her and tried hard to free her from the taint of the original story. Would Mr. Harris read into this source of the play a record of the same historical intrigue? In passing we are told that the poet's wife appears as the scold, Adriana, of "The Comedy of Errors"; his mother as Volumnia, of "Coriolanus," and his daughter, Judith, as Marina, Perdita, and Miranda. Mr. Harris's reasoning is too uninstructed to deserve to be recounted in detail. It is a good illustration of how smartness, when it attempts to unmask genius, is itself stripped bare.

Of the Select Plays of Shakespeare, which J. C. Smith as general editor is publishing in small volumes through the Clarendon Press (Frowde), we have just received "Richard the Second." The introduction and notes, for which Henry Newbolt is responsible, are very full. The former contains a helpful discussion of the historical characters in the play and a comparison of them, as found in actual life, with Shakespeare's conceptions.

The success which Professor Geddes had with the presentation of the "Masque of Learning" has encouraged him to give similar performances at the University of London, where in March he will present a series of ancient and modern masques.

James O'Neill has been engaged for "Joseph and His Brethren" at the Century Theatre. He will play Jacob and Pharaoh.

Edward Locke's latest play, "The Silver Wedding," will be placed in rehearsal this week and produced in New York late in January. "The Silver Wedding" is described as a folk-play of German-American life.

Macdonald Hasting's new play, to be produced in London immediately by Ethel Warwick, is in four acts, and of a serious nature. It deals with the law which allows the separation of mother and child, and incidentally touches upon the proceedings of the recent Divorce Commission. The principal character, to be played by Miss Warwick, is that of a woman of thirty-five with a grown-up child. The first act takes place in a London hotel; the remaining three in Guernsey.

William Poel was the guest of honor at a dinner given in London recently, in honor of his Elizabethan production of "Troilus and Cressida," which is to be the last he will undertake on his own responsibility. Granville Barker presided and spoke of the great influence which Poel had exerted on the contemporary theatre. Mr. Poel, in reply, said that if the drama was to hold its proper position in the theatre, the author must realize his responsibility, and, besides being able to write, he must be a dramatist, a poet also, and a philosopher, for he would be called upon in the future to represent Nature on the stage as it really existed. The actor would be called upon in the future to consider that his sole and responsible business was to be loyal to the author and to interpret the author according to his intention. His own work was going to be carried on by their chairman, and no doubt it would be carried on in a more practical way than it had been by himself.

Martin Harvey is about to produce "Hamlet" in conjunction with Max Reinhardt. Talking with a London reporter, he said: "We hope to have one special performance almost immediately, if we can get the right sort of theatre. If this proves impossible to arrange, the production will open my April season in London. Mr. Reinhardt has, I believe, staged 'Hamlet' on the Continent, giving it an early fifteenth-century setting. But we are now hard at work on quite original lines, though we keep to my usual eleventh-century setting." Explaining some of the points which the production will bring out, Mr. Harvey said that the treatment would be simple, large, and spacious.

After a tour extending over eighteen months, Matheson Lang and his wife, Hutin Britton, have returned to England. During their absence they have visited the principal cities in South Africa and in India, and have broken many records. Their repertory included seven Shakespearean plays and five modern pieces. During the course of their eight weeks' season in Johannesburg Mr. Lang made a special production of Miss Peggy Webling's drama, "Westward Ho!" adapted from Charles Kingsley's romance. Mr. Lang will try to procure a London West End theatre wherein to present this piece.

Gerhart Hauptmann paid a fine tribute to the memory of the late Otto Brahm, until recently director of the Lessing Theater in Berlin. He said:

> I do not believe that in the whole history of the German theatre there was ever before him such a union of practical force and ideal force. He compelled the theatre to serve serious, true, and living art. He brought it near to life, and life near to it, as had never been done before. . . . There may be people who regard a fight for the prestige of the German theatre to be not important enough to justify belief in its seriousness. It is Brahm's service that he recognized its importance and gave himself to the work.

John Cheever Goodwin, writer of plays and adapter of musical comedy librettos, died last week at his home in New York. Mr. Goodwin, who was born in Boston in 1850 and graduated from Harvard in 1873, commenced his connection with the stage as an actor, being for a season with the company headed by the elder Sothern, but he soon gave up acting for writing. Among his best-known librettos are "Evangeline," "Wang," "Dr. Syntax," and "Lost, Strayed, or Stolen." He also wrote several plays, among them "The Merry Monarch," "The Lion Tamer," and "The Monks of Malabar."

Sir Hubert Parry's new symphony, recently played by the London Philharmonic, has curious headings for its parts. The four movements played continuously are called "Stress," "Love," "Play," and "Now!" and the themes of the first are described by such phrases as "brooding thought in the presence of tragedy," "wrestling with the meaning of it," "revolt," "tokens of suffering," and "the pity of it." But the listener who begins with the music and works back to the verbal description, as all real listeners must, the London *Times* remarks, generally finds that he is passing from the greater to the less—that the music has carried him so much further than the words that the latter are superfluous.

Ernest Newman has an article in the *Musical Times* for December on "A Forerunner of Wagner," its subject being Ignaz Franz Mosel, whose book, "Versuch einer Aesthetik des dramatischen Tonsatzes," originally published in the year of Wagner's birth (1813), and now made accessible in a new edition, edited by Dr. Eugen Schmitz, anticipates Wagner's principles in a remarkable way.

The National Conservatory of Music of America, No. 126 West Seventy-ninth Street, New York city, gives more free scholarships to pupils of talent without means than any other music school in this country, following the example of the Paris Conservatoire. Nine were granted at the annual entrance examinations in September, and more scholarships for voice, piano, and violin will be given at the semi-annual examinations, to be held Saturday, January 4, 1913, from 10 to 12 A. M. and 2 to 4 P. M.

Luisa Tetrazzini has received the gold medal of the London Philharmonic Society, an honor that has been conferred on few musical celebrities. Among those who have received it are Patti and Paderewski. Mme. Tetrazzini will accompany the Chicago Opera Company to the Pacific Coast next spring.

Julia Heinrich, the daughter of the eminent Armenian baritone, Max Heinrich, continues to receive warm praise from the German critics. She is now prima donna of the Stadt Theater in Elberfeld, gaining experience in many rôles. This is the chief advantage of being associated with one of these theatres.

Mme. Gadski, who returns to the Metropolitan this week, after a most successful concert tour in the West, appears to have had some unique experiences. In Texas, at Fort Worth, her coming created a great stir. The house, we read, was crowded, and seats had to be provided on the stage for hundreds of people. "It was really quite funny, for after the first group of songs some one handed Mme. Gadski a note in which she was asked to please sing some of her songs facing those on the stage. She did so, turning her back to the auditorium each time an encore was demanded and singing it that way. Thus it happened that she sang about one-third of the programme all over again."

Art

Homer Martin. By Frank Jewett Mather, jr. New York: F. F. Sherman. $12.50.

Like other great artists who in their lifetime were unknown to the large public, Homer Martin, perhaps the most elevated and distinguished of our landscape painters, is slowly gaining recognition. Little has been written about him, yet his fame grows steadily, and in an entirely natural manner. There is every reason, therefore, that a serious study of him should be welcome. Such a study was no easy task. In the case of one of our own people there is none of that help for the imagination which comes from the remoteness of the atmosphere about the foreign artist in the traditional, Old World *milieu* in which a Millet, for example, and his models were placed. To make the matter more difficult, most of Martin's works are scattered in unknown hands, and what could be known of them and of him, outside of his wife's little book, was to be found in the memories of a few friends. Our thanks are due to the author for his painstaking labor to establish facts which would otherwise be lost, and to discover the works of the artist and give them their proper date, thus establishing the chronology of his development. This Catalogue Raisonné, which must be the essential part of such a work, is admirably done and makes the book one of solid and permanent value.

The author is a humanist as well as a critic, to whom the man and his work are inseparable. He follows the modern method of making a personality reveal itself to the reader by a hundred minute facts, in the same way as a mosaic picture results from a mass of little cubes. The success of such a method depends upon the proper adjustment and relation of parts, as well as upon the correctness of facts used. Now, in his desire to realize and do full justice to Martin the man, Mr. Mather labors under a great disadvantage—he has never even seen the artist. Notwithstanding all he learned, and in spite of his evident candor, his presentment will not give entire satisfaction to those who knew Martin, and may convey a wrong impression to those who did not. When Whistler made the remark which Mr. Mather quotes in regard to Martin's physical appearance, it can only have been in the sense of: "Gentlemen, here is my friend Martin, a true artist, although he looks like anybody else"—a remark which might be made about many other great men. But the addition of a saying of Boughton's to reinforce the much exaggerated impression of the man the author wishes to convey is particularly unfortunate. *On choisit ses témoins*—in the Court of Public Opinion as in any other court! The simple statement that Martin was wont to accompany one of the most distinguished gentlewomen of New York to public concerts would have helped the reader to draw his own conclusions on the point in question.

The critical temper of the author is that of the broad-minded scholar who knows and values the art of many schools. The descriptions of pictures are admirable; each subject is felt and characterized with sympathetic insight, and with a fine glow of enthusiasm tempered by a sense of measure. Possibly, Mr. Mather underestimates Martin's technique. On seeing some of Raphael's most beautiful figures very much enlarged on the screen, one becomes aware that the drawing is often quite "out," that it is not at all what the student is taught (and rightly) as correct drawing; yet, it is not only good drawing, it is drawing of the finest quality because it so thoroughly expresses the artist's conception. Whether it might do that and be "correct" is now becoming more and more a purely academic question. In the same way the battle of techniques is getting to be a thing of the past. "There are fifty roads to town and a great many more to heaven," and all technique is good which enables the artist to express himself and convey his particular message. Martin's technique needs no apology, neither does that of Inness; but if the latter seems more facile, more brilliant, more "painter-like" as we now say, that is just where it may be somewhat inferior to the former. We are inclined, for other reasons also, to disagree with Mr. Mather on the relative ranks of these two artists. Inness has benefited greatly by the fact that he was doing large things, with a proper method and adequate technique, when American landscape painters were given to doing the little things in a little way. Inness and Martin were alike in this, although the achievements of the one were generally recognized, while those of the other were not; but in poetical feeling the large and simple art of Inness is comparatively commonplace. Martin's mood is not only subtler, more moving, and more distinguished, but it is far deeper. Whatever may be said of Inness, surely Martin is the great lyric poet of the two.

But it is obvious that we are too near these men, that we lack perspective, to judge them with anything like finality. Such a book as Mr. Mather's will prove invaluable to students and lovers of art. It belongs to the class of serious, elevated, and scholarly, yet human, works of which we are in particular need and which we so seldom get.

The dialogues contained in the little volume "On the Truth of Decorative Art," by Lionel de Fonseka (London: Greening & Co.), are more important than their modest manner and dress would suggest. Ostensibly we have the plea of a Ceylonese æsthete against the Western theory that art should be the expression of idiosyncrasy and directed solely to the appreciation of a cult. Beauty and truth are to be found not along the lines of asserting and exaggerating personality, but through the restraint and disciplining of personality and its adaptation to social use. Truth and beauty are not met in the endeavor at self-expression, but through submission to universal decorative conventions which are the key to the general heart. Thus no European art is really fine and broadly humane except that of Greece and the Middle Ages with its fixed themes and established symbolism. The way of beauty and truth is social. One must avoid inordinate curiosity, both about nature and about one's own soul. This collectivist and anti-individualist doctrine is advanced with quiet and gentle conviction. The book should be read by all who seek a corrective for the restless individualism of modern art. Doubtless few will go the whole quietistic way with Mr. Fonseka. Yet it is hard to gainsay the force of passages like this: "Has it never occurred to you that it is inhuman to breed grotesque personalities for the sake of art? You worship beauty and you sacrifice human victims on your altars."

In a letter to the London *Times*, Bernard and Ellen M. Whishaw give interesting details of the remarkable discoveries recently made in the centure of Seville. Excavations were there undertaken of a purely business nature, with the object of improving the access to the top of a steep ascent known as the Cuesta (cliff) del Rosario, which has hitherto been believed to be part of an outcrop of rock in the midst of the great plain of Guadalquivir. During these operations, a quantity of large stones were dug up, which were recognized as dating from a period far earlier than that commonly accepted for the foundation of Seville or Hispalis by Julius Cæsar. Careful investigations were then made, and it was found that the "cliff" was not a natural rock at all, but an artificial mound, formed by building tier after tier of houses on the débris beneath. A number of different floors of different construction were brought to light, and roughly dated—the earliest as far back as the Bronze Age—by the objects discovered with them. Brick and stone walls extending a long distance were also laid bare. It is the belief of the discoverers that this ancient site is to be identified with that of the lost city of Tharsis, which has before been shown to correspond exactly with the site of Seville. The various objects found during the excavations have been deposited in the Museum of Andalusian Pottery and Lace at Seville.

Finance

THE "TURN OF THE YEAR."

The sudden recovery on the Stock Exchange, towards the close of the past week, did not accomplish much towards making good the declines of the two preceding months, which had run to 15 and 20 points in many stocks, but it brought up for fresh consideration some factors, other than those which have lately absorbed the attention of the financial community. This week-end recovery affected simultaneously the European stock exchanges and our own: for instance, British consols moved up 1 point in London, and French rentes ½ at Paris, on the very days when Reading shares and Union Pacific were advancing 5 points apiece on Wall Street. Each market had its own particular explanation for the recovery. London was cheered by the fact that the predicted rise in the Bank of England rate did not occur; Paris was relieved at positive reports that Austria and Servia had composed their differences; Wall Street professed relief that the "Money Trust" Committee had adjourned.

All these causes may have had a hand in the rise of prices; but the coincidence of three separate irresistible reasons for recovery, on three separate markets, was somewhat striking. Since, also, practiced students of finance are aware that stock exchanges will seize on the nearest plausible explanation for any movement of prices, whether up or down, there is reasonable warrant for the question whether the movement on all three markets, and on others with them, might not perhaps have had a common cause, apart from those assigned in the gossip of the markets. There is at least one factor, of recognized importance to all the markets and stock exchanges of the world, which now has to be taken into account with more carefulness than heretofore. That is the fact that the end of the year is at hand.

The large forward and backward movements of economic prosperity are not affected by the passing from one calendar year into another. The natural and legitimate elements in the situation are the same on the 15th of January as on the 15th of December. But a forced and unnatural financial position—especially one dominated by money stringency—is apt to be considerably changed by the ending of a year. December is the climax of demand from all quarters—financial, mercantile, and industrial—on the money markets. Such are the habits of those markets that the point of highest tension is usually reached on, or shortly before, the last day of the year, with progressive relaxation of the strain and eventual return to easy money, after a few weeks of the year.

There are many causes for the abruptness and completeness of that change; but the essential point is that the invariable relaxing of the money strain brings a new test to the financial situation, and throws new light on the underlying conditions. The turn of the year after December, 1899, was a notable case in point. The month ended with European money markets at the utmost tension, under the influence of the Boer War, the blockade of the Transvaal gold mines, and the strain of financing a large commercial business. Bank rates were 6 per cent. at London and 7 per cent. at Berlin; 6⅞ had just been paid for three months' bills on Lombard Street; call money on Wall Street had been at 186 per cent., and closed the year at 25, with even six months' loans at 6. Before the end of January, however, the London bank rate was down to 4 per cent., the Berlin rate to 5½, and the New York money market got down to 3 per cent. on call and 4 on time. This was typical of the movement after the turn of the year, even following severe tight-money periods, such as 1907 and 1909.

Such abrupt return to easier conditions on the money market, after December 31, does not necessarily restore favorable conditions on the stock exchanges or in general trade; that depends on circumstances. The low money rates of January, 1900, so far as Europe was concerned, served only to introduce a general decline of trade prosperity in England and Germany and a prolonged period of both financial and industrial liquidation. In America, on the other hand, notwithstanding the reflex influence of the European reaction and the handicap of a disturbing Presidential campaign, prosperity continued, leading up to the active times of 1901. This was because the underlying conditions differed in Europe and America. On the one continent a prolonged and overdone boom in trade was reaching its natural end when the money strain occurred; on the other, the upward movement of industrial activity had just begun. The December stringency had disguised the real state of affairs on both sides of the Atlantic.

The test of the turn of the year has not always had such plain results. It did not after the extreme money tension of December, 1906; for, in 1907, though the year began with easier money markets, the high-strung speculation prevalent throughout the world continued, and soon brought all the world's markets back to the December stringency. It will presently be possible to determine which of the two periods referred to bears most resemblance to the present period. At all events, the first few weeks of 1913 will go reasonably far towards showing just how much of the recent European depression has been due to actual fear of a general European war and just how much to money stringency; also to what extent the recent extreme weakness at New York is attributable to the Southern Pacific decision, the Money Trust inquiry, and the coming tariff revision, and to what extent to the unusual difficulty of procuring money, whether in Wall Street or in Europe, in the face of the demands on capital imposed by almost unprecedented interior trade activity.

THE JANUARY ISSUE OF THE
YALE REVIEW
CONTAINS

"THE DEMOCRATS AND THE TARIFF"

By HENRY C. EMERY,
(Chairman of the Tariff Commission under the administration of President Taft, and Professor of Economics at Yale University.)

This is a brilliant and authoritative statement of the efforts to revise the tariff under the last Congress, with side lights on the two parties in that session from a man who was in the midst of the controversy. Mr. Emery, in this paper, goes into what the next Congress is likely to do and what it can do. If it is pessimistic of popular applause over the results, from a lower cost of living view point, the reader will discover the reason.

"POPULAR ELECTIONS OF SENATORS"

By MAX FARRAND *(Professor of History at Yale University)*

"TRADITIONS IN GREEK LITERATURE"

By GILBERT MURRAY *(Professor of Greek at Oxford University)*

AND MANY OTHER PAPERS OF LITERARY AND SCIENTIFIC INTEREST, together with signed and authoritative book reviews.

Says the *Educational Review* for December, 1912:

> "One of the best reviews appearing in the United States is the Yale Review. Its broad scope, its literary standards, and its attractive appearance commend it to thoughtful and studious readers. Amid the great mass of worthless or worse than worthless publications, one turns with relief and satisfaction to the Yale Review for something that is really worth while for intelligent people to read."

$3.00 a year
